The Builder

THE J. PAUL GETTY MUSEUM LIBRARY

The Builder.

AN

ILLUSTRATED WEEKLY MAGAZINE,

FOR THE

Architect, Engineer, Archæologist, Constructor, & Art-Lover,

CONDUCTED BY

GEORGE GODWIN, F.R.S., F.S.A.

Honorary Member of various Societies; Author of "History in Ruins," "Town Swamps and Social Bridges," "Another Blow for Life," &c.

"Every man's proper mansion-house, and home, being the theater of his hospitality, the seate of selfe-fruition, the comfortablest part of his own life, the noblest of his sonne's inheritance, a kinde of private princedome, nay, to the possessors thereof, an epitome of the whole world, may well deserve, by these attributes, according to the degree of the master, to be decently and delightfully adorned."

"Architecture can want no commendation, where there are noble men, or noble mindes."——SIR HENRY WOTTON.

"Our English word TO BUILD is the Anglo-Saxon Byldan, to confirm, to establish, to make firm and sure and fast, to consolidate, to strengthen; and is applicable to all other things as well as to dwelling-places."——DIVERSIONS OF PURLEY.

"Art shows us man as he can by no other means be made known. Art gives us 'nobler loves and nobler cares,'—furnishing objects by the contemplation of which we are taught and exalted,—and so are ultimately led to seek beauty in its highest form, which is GOODNESS."

VOLUME FOR 1863.

LONDON:

PUBLISHING OFFICE, YORK STREET, COVENT GARDEN, W.C.

COX AND WYMAN,
CLASSICAL, LAW, NEWSPAPER, AND GENERAL PRINTERS,

ROYAL ACADEMY of ARTS.—SYDNEY SMIRKE, Esq. R.A. Professor of Architecture, will deliver his LECTURES on the Evenings of THURSDAY, the 8th, 15th, and 22nd of JANUARY, and the 5th of FEBRUARY next. The Lectures commence each evening at EIGHT o'clock precisely.

JOHN PRESCOTT KNIGHT, R.A. Secretary.

BY Order of the Secretary of State for India in Council.—Notice is hereby given, that TEN JUNIOR APPOINTMENTS in the Engineer Establishment of the Department of Public Works in India will, in the year 1863, be open to public competition.

A Competitive Examination will, accordingly, be held in this Office in the month of JUNE next. Full printed particulars of the conditions on which candidates will be admitted to the Examination, and also respecting the nature of the appointments to be competed for, may be obtained at this Office, on application, either personally or by letter. (Signed) T. G. BABING.

India Office, 28th June, 1862.

N.B.—All communications to be addressed to the "Under Secretary of State for India."

SHEFFIELD SCHOOL of PRACTICAL SCIENCE and METALLURGY.

PRESIDENT.

His Grace the Duke of Devonshire, K.G. F.R.S. D.C.L. Chancellor of the University of Cambridge.

VICE PRESIDENTS.

The Mayor of Sheffield, John Brown, esq.
The Master Cutler
The Right Hon. Lord Wharncliffe.
Sir David Brewster, K.H. D.C.L. F.R.S.L. & E. M.R.I.A.
Sir Roderic Murchison, F.R.S. Director of the Royal School of Mines.
John Percy, esq., M.D. F.R.S. Professor of Metallurgy in the Royal School of Mines
William Fairbairn, esq. C.E. F.R.S.
Robert Hunt, esq. F.R.S. F.S.S. Keeper of Mining Records.
Warrington W. Smyth, esq. M.A. F.R.S. Professor of Mining and Mineralogy in the Royal School of Mines.

DIRECTOR.

The Rev. G. B. Atkinson, M.A. Principal of the Collegiate School; late Fellow and Assistant Tutor of Trinity Hall, Cambridge.

PROFESSORS.

Chemistry, Metallurgy, and Geology—James Allen, Ph.D. F.C.S. of the Universities of Giessen and Berlin.
Engineering and Mining—J. Thompson, C.E.
Mathematics, Natural Philosophy, and Applied Mechanics—Rev. G. B. Atkinson, M.A.

The Sheffield School of Practical Science and Metallurgy will afford a complete scientific and practical education to students who are destined to become civil, mechanical, or mining engineers, or manufacturers of any kind. Its object is thoroughly to discipline the student in the principles of those sciences upon which the operations of the engineer, metallurgist, or manufacturer depend.

The education will be given by means of systematic Courses of Lectures, by Catechetical Class Instruction, by Practical Teaching in the Laboratory and Drawing-room, and occasionally by Field Excursions.

The School of Practical Science and Metallurgy will be conducted in the Buildings of the Sheffield Collegiate School. The two Institutions, although both under the superintendence of the Rev. G. B. Atkinson, Principal of the Collegiate School, are, however, entirely distinct.

A detailed Prospectus, containing Syllabuses of all the Courses of Lectures, and all other information, arrangements for boarding, &c. may be obtained by application to the Director.

THE SCHOOL WILL OPEN IN THE FIRST WEEK IN FEBRUARY, 1863.

ARCHITECTS' BENEVOLENT SOCIETY.

PATRONS.

Sir Robert Smirke, A. J. B. Beresford Hope, Esq. M.P.

PRESIDENT—Sydney Smirke, Esq. R.A.

TREASURER—William Tite, Esq. F.R.S. M.P.

TRUSTEES.

Philip Hardwick, Esq. R.A. | Charles R. Cockerell, Esq. R.A.
Geo. Gilbert Scott, Esq. R.A.

The List of Subscribers and Annual Report may be obtained of the Hon. Secretary. Subscriptions will be received by the Treasurer, WILLIAM TITE, Esq. St. Helen's-place.

J. TURNER, Hon. Secretary, 15, Wilton-street.

BUILDERS' BALL will take place at WILLIS'S ROOMS, St. James's, FEBRUARY 12th, 1863.

The Programme of Conversations and Lectures for the first three months of the Session will be issued to all Members on WEDNESDAY last. Annual subscription, One Guinea. Entrance Fee, One Guinea. By order

HENRY OTTLEY, Hon. Secretary.

COMPETITIONS.

TO ARCHITECTS.—WESLEYAN CHAPEL, VESTRIES, and SCHOOL-ROOMS, King-street, Falmouth.—The Committee appointed to carry out the ERECTION of a NEW WESLEYAN CHAPEL and SCHOOL-ROOMS, in King-street, Plymouth, invite architects to send designs, with plans, specification, and estimate, on or before MARCH 2nd, 1863, to Mr. JOHN HILL Wesleyan, Falmouth. The designs which obtain premium to be the property of the committee, who are not to be bound to employ any of the competitors to carry out the works. In the event of the successful competitor being employed, the premium will merge into the commission. Two premiums will be given, one of £5, and the other of £2. A ground plan and all necessary particulars for the guidance of architects, may be obtained on application to the Rev. J. LOUTIT, 3, Stoke-street, Plymouth.

PUBLIC HALL.—To ARCHITECTS.—The Provisional Committee of the Tunbridge Wells Public Hall Company (Limited), not having succeeded in obtaining plans strictly in accordance with their requirements, are desirous of again receiving PLANS, Elevations, Sections, Specifications, and Estimates, for the ERECTION of a PUBLIC HALL (Corn Exchange premises, and 300 feet frontage to a public road, and 300 feet in depth; the cost not to exceed £5000, including heating, lighting, ventilating, internal fittings, and decorations. Twenty Pounds will be given for the set of plans, &c. adopted, provided the architect is not employed, and Ten Pounds to the next approved set. All plans, &c. are to be sent in scale, and other matters, to the Secretary by the last day in JANUARY, 1863. Further particulars may be obtained of the Hon. Secretary, Mr. JOHN COLBRAN, Tunbridge Wells

December 23rd, 1862.

CONTRACTS.

CITY of LONDON, BARBERS' HALL.—Important SITE for WAREHOUSES, or MANUFACTURING PREMISES, in the immediate vicinity of Wood-street, Cheapside.—The Committee of the Worshipful Company of Barbers, will next at their Hall, on THURSDAY, the 29th day of JANUARY, 1863, to receive TENDERS, for letting on a building lease, for sixty-three years, the extensive PREMISES, known as Barbers' Hall, situate in Monkwell-street, Wood street, comprising three houses, fronting thereto, the passage leading thereto, and the greater portion of the Company's Hall, together with the kitchen, scullery, and outbuildings, having a frontage towards Monkwell-street of about 85 feet by an average depth of about 110 feet, and an extreme depth of about 125 feet.—Full particulars, with a plan of the property, elevation, and section of street front, also conditions of letting, may be obtained, on application to the Clerk of the Company; to Mr. CHARLES JOHNSHOPPEE, the Company's Surveyor, No. 61, Doughty-street, W.C.; or to the Beadle at the Hall.—By order,

HENLEY GROSE SMITH, Clerk.

4, Warnford-court, Throgmorton-street, E.C.

CONTRACTS.

WAR DEPARTMENT CONTRACT.—NOTICE to BUILDERS.—TENDERS are required for the ERECTION of a LAUNDRY, near the Hospital at Albany Barracks, Parkhurst, Isle of Wight.

Parties desirous to tender for this work must leave their names at this office on or before the 13th JANUARY, 1863, and pay the sum of half a guinea for the Bills of Quantity, which will be forwarded to them as soon as prepared by the Government Surveyor.

The Secretary of State does not bind himself to accept the lowest or any Tender.

Royal Engineer Office, Albany Barracks, Isle of Wight, January 1, 1863.

ALTERATIONS at the COUNTY PRISONS, MAIDSTONE.—Persons willing to CONTRACT with the Justices of the county of Kent for carrying out works to be done in making ALTERATIONS to the COUNTY PRISONS at Maidstone, may see the plans and specification at the Office of the County Surveyor, Maidstone, any day except SUNDAY between the hours of TEN and FIVE. The work is to be tendered for in the three following Contracts:—

CONTRACT No. 1.—All pulling down, and all Bricklayers', Masons', Carpenters', Joiners', and Ironmongers' work, including a quantity of Inch Slab Slate Partitions.

CONTRACT No. 2.—All Smith and Founder's Work.

CONTRACT No. 3.—All Plumber, Glazier, and Painter's Work.

Forms of Tender are to be obtained at the County Surveyor's Office, where filled Tenders, endorsed, "Tender for Work at the County Prisons, Maidstone," are to be delivered by FOUR o'clock p.m. on MONDAY, the 12th of JANUARY, 1863, addressed to the Tender to be sent to the Office at the Castle, Maidstone, at HALF-PAST TWELVE o'clock on TUESDAY, the 13th JANUARY, 1863. Neither the lowest nor any other Tender will be accepted unless approved of in all particulars. Security will be required for the performance of the several contracts.

H. A. WILDES, Clerk of the Peace.

Maidstone, December 17, 1862.

METROPOLITAN BOARD of WORKS.

TO BUILDERS, CONTRACTORS, and OTHERS.—The Metropolitan Board of Works hereby give notice, that they will meet at the Office of the Board, Spring gardens, S.W. on FRIDAY, the 9th day of JANUARY instant, at TWELVE o'clock at noon precisely, at which time proposals will be opened from persons who may be willing to CONTRACT for the CONSTRUCTION of a BRICK SEWER 3,230 feet in length, extending with other Works in connection therewith, from Hackney-road, Dalston, in the parish of Hackney, in the county of Middlesex. Plans, sections, and a specification, together with the form of Tender, may be inspected, and other particulars obtained on application to Mr. W. HAZALGETTE, Engineer of the Board, at the Office, Spring gardens, between the hours of NINE a.m. and FOUR p.m.; or on SATURDAY, between the hours of NINE a.m. and TWO p.m. until THURSDAY, the 15th day of JANUARY. The Tenders are to be addressed to the Clerk of the Board, and must be delivered at the Office before FOUR o'clock on the last-mentioned day, and no Tender will be received after that hour. The parties tendering must be in attendance at the Board at TWELVE o'clock on the day appointed for opening Tenders. The Board do not bind themselves to accept the lowest or any Tender, and the party whose Tender shall be accepted will be required to provide two approved sureties for the due and satisfactory performance of the works.

JOHN POLLARD, Clerk of the Board.

Spring Gardens, S.W. 1st January, 1863.

SEWERAGE WORKS at HAMPSTEAD.

The Vestry of the Parish of Saint John, Hampstead, in the county of Middlesex, hereby give Notice that they will be ready at the Vestry, to be held at the Board Room at Hampstead Workhouse, on FRIDAY, the 9th day of JANUARY next, at half past SEVEN o'clock in the evening, precisely, to receive Sealed Tenders from parties who may be willing to CONTRACT for CONSTRUCTING a BRICK SEWER 2,200 feet in length, or thereabouts, with other WORKS in connection therewith, commencing at a Culvert under the Hampstead Junction Railway, at West End Lane, Hampstead, and ending on land, and for the maintenance of such Works in complete repair for twelve calendar months after completion. Plans, Sections, and a Specification of the Works, may be inspected, and a form of Tender may be had on application at the Surveyor's Office, New End, Hampstead, between the hours of TEN a.m. and FOUR p.m. Sealed Tenders (in the printed form only) addressed to the Vestry Clerk must be delivered at the Vestry Offices on or before FRIDAY, the 9th day of JANUARY next, not later than SEVEN o'clock p.m. of that day, after which hour no Tender will be received. The attendance at the Vestry of the party tendering or of some competent person on his behalf will be required. The Vestry do not bind themselves to accept the lowest or any Tender, and the party whose Tender may be accepted will be required to provide two approved Sureties to be bound with the Contractor in a Bond and several Bond in £1000 for the due performance of the Contract

THOMAS TOLLER, Vestry Clerk.

Vestry Offices, Hampstead Workhouse,
December 29, 1862.

TO EXCAVATORS, BUILDERS, and OTHERS.—The Strood Local Board of Health are willing to receive TENDERS from competent parties for the CONSTRUCTION of a SEWER and other Works at Kingsdown Farm, near to Strood. Drawings and a specification of the said Works may be seen, at the Offices of the undersigned on and after SATURDAY, the 27th instant, where a meeting of the general drawing and schedule of quantities of works to be executed may be obtained on payment of the sum of 10s.; but it is to be understood that the Local Board will not be responsible for the correctness of the quantities so supplied, which must be verified by the parties tendering. Sealed Tenders, marked on the outside "Tender for Sewer at Kingsdown Farm," addressed to the undersigned, must be delivered at or sent to before ELEVEN a.m. on TUESDAY, the 6th JANUARY, 1863. The Local Board do not bind themselves to accept the lowest or any Tender.

EDWIN WITCHELL, Clerk to the Local Board.

Strood, December 14, 1862.

[For remainder of Contracts see next Page.

CONTRACTS.

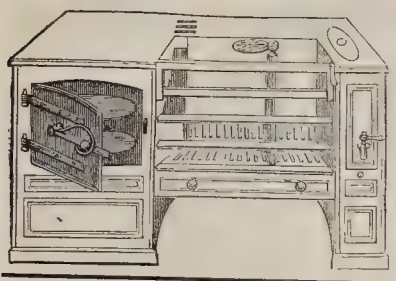
CONTRACTORS FOR ROOFING THE GREAT EXHIBITION BUILDING OF 1862



By Her Majesty's Royal Letters Patent.

F. McNEILL & CO. of LAMB'S BUILDINGS, BUNHILL ROW, LONDON, Manufacturers and ONLY Patentees of

THE PATENT ASPHALTED FFLT, FOR ROOFING HOUSES, VERANDAHS, SHEDS, &c.

Patronised by
HER MAJESTY'S WOODS AND FORESTS,
HER MAJESTY'S COMMISSION OF CROWN, ROYAL DOMAINS (SCOTLAND),
HER MAJESTY'S WAR DEPARTMENT,
HER MAJESTY'S ESTATE, ISLE OF WIGHT,
ROYAL AGRICULTURAL GARDENS, REGENT'S PARK.

And by the most eminent members of the Royal Agricultural Societies of England, Scotland, and Ireland, at whose great national shows it has been exhibited, and OBTAINED THE PRIZE, for being the best, most compact article for roofing; also used for under slates at the Royal Agricultural Society's House in Hanover square. Its advantages are lightness, warmth, durability, and economy. It is impervious to rain, snow, and frost, and a non-conductor of heat and sound. The Felt can be cut to any length, by 32 inches wide. The price is only ONE PENNY PER SQUARE FOOT. Samples, with full directions as to its use and the manner of applying it, with TESTIMONIALS, some of them of seven years' experience, from Architects, Builders, Noblemen, and Gentlemen, who have extensively used it, sent free to any part of the town or country. DRY HAIR FELT, for covering Boilers, &c. is also manufactured, by which a saving of about 25 per cent. in fuel is effected. The TRADE are respectfully requested to send their orders DIRECT to the FACTORY, as the surest means of being supplied with a good article, and in lengths best suited to their needs. The original works where the above roofing is made for F. McNEILL & CO'S Manufactory, LAMB'S BUILDINGS, BUNHILL ROW. Roofs covered with McNEILL'S FELT, to be seen at the CAMPS of ALDERSHOTT, CURRAGH, SHORNCLIFFE, and COLCHESTER, upwards of three Millions of Feet; also the GREAT EXHIBITION BUILDING of 1862, about One Million Feet. A Liberal Discount allowed to the Trade.

ST. PANCRAS IRON WORK COMPANY,
OLD SAINT PANCRAS ROAD, LONDON, N.W.

PATENT WROUGHT-IRON STABLE FITTINGS
SHOULD BE ADOPTED FOR THE FOLLOWING REASONS, viz. :—
That the BREAKAGES in Cast-Iron Fittings are numerous, and that one fracture from a kick, or other cause, may occasion an injury to a Horse, and involve a loss equal to the entire expense of fitting up the Stable. The fear of this has led to the use of wood, and, in the case of Cast-Iron GUTTERS, to the adoption of another and less effective mode of draining.

PATENT ENAMELLED TOP PLATE MANGER, WITH RACK AND WATER-TROUGH,
The whole of which, except the Rack, being enamelled, can be kept as clean as a DINNER PLATE.

PATENT FASTENINGS FOR THE DOORS OF LOOSE BOXES.
These Catches and Hangings work easily, are self-acting, and cannot be put out of order: by their use all projections by which horses are often blemished are rendered impossible; advantages peculiarly their own.

THE PATENT HARNESS FITTINGS
Keep the Harness and Saddles in shape, and are constructed so as to admit the air getting to the underside of them when hung up, thereby insuring a quick and perfect airing from any wet or moisture.

EVERY DESCRIPTION OF STABLE FURNITURE.

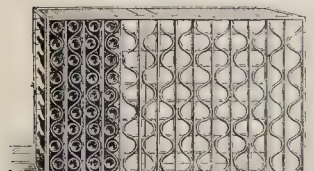
WROUGHT IRON WINE BINS.



FARROW & JACKSON

Beg to call the attention of Architects and Builders to their Wrought Iron Wine Bins, which are ADAPTED (as shown) either for BRICK ARCHED VAULTS or CELLARS with FLAT CEILINGS, the mode of fixing in either case being so simple, that they may be put up by any ordinary workman. They combine great strength with lightness and economy of space, and their DURABILITY has been satisfactorily PROVED DURING THIRTY YEARS.

The Shelves are formed of Plates of Iron laid on Bars, which rest on the Cross-bars of the Lattice Uprights, and are removable at pleasure.

Plans and Estimates furnished, and Cellars fitted complete in any part of the Kingdom. Also their

TUBE for GAS; Galvanized ditto, for Water; High-pressure Cocks, &c. Manufacturers of Dr. Arnott's Improved Ventilators.
HULETT & CO. 55, High Holborn.

CAUTION to ARCHITECTS and BUILDERS. In consequence of complaints arising from the substitution of INFERIOR and SPURIOUS ARTICLES instead of
SMITH'S PATENT DOUBLE-ACTION DOOR SPRINGS;
SMITH'S PATENT WEATHER-TIGHT WATER BAR; and
SMITH'S PATENT WEATHER-TIGHT CASEMENT FASTENING for FRENCH WINDOWS

The above are most respectfully requested to observe that all GENUINE ARTICLES are stamped with the NAME and ADDRESS, SMITH, Patentee, 68, Princes-street, Leicester-square, London; and SUCH ONLY are WARRANTED.

THE PRIZE MEDALS,

(LONDON, 1851. PARIS, 1855. LONDON, 1862.)

Awarded to

COTTAM & COMPANY,

2, WINSLEY STREET, LONDON, W.

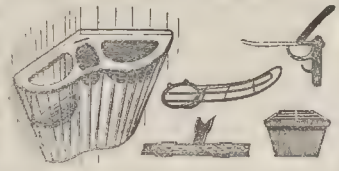
For progressive and general improvements in

STABLE FITTINGS AND HARNESS BRACKETS.

Awarded a prize at the Paris Exhibition,

Patronized by the English and French Governments, as well as by the principal Nobility, Gentry, and Hunting Establishments in the Kingdom

In use at her Majesty's Stables, Aldershott and Balmoral.



COTTAM & COMPANY, Winsley-street, W. are the original Inventors of the PATENT ENAMELLED MANGER, Water-trough, and Wire-division Rack, united to an iron top-plate, and forming one room of its and useful Fixture, having COTTAM'S Patent Noiseless Hinge Bolt and Collar Rein attached, which is taken to the back of the manger, and works with ease and freedom up or down the guide bar.

COTTAM'S NEW PATENT SEED BOX, an important addition to the above fittings, being simple in construction, light, and durable, promotes cleanliness, and is economical in its results.

COTTAM'S PATENT PERMANENT ATTACHED DROP COVER, for the above, is a most essential addition to their Fittings, as it covers in the way; can be placed and replaced in an instant; while its cheapness, simplicity, and utility in keeping the contents of the trough clean, and regulating the quantity to be taken, is quite sufficient to insure its use.

COTTAM'S PATENT SADDLE AND HARNESS BRACKET COMBINED

can be used with great advantage where space is an object, as it can be turned up out of the way when not in use.

COTTAM'S IMPROVED WROUGHT-IRON VENTILATING BRACKET preserves the shape and allows a free admission of air to the under parts of the saddle.

COTTAM'S IMPROVED SURFACE CUTTER, with perforated moveable cover, the use of which prevents accidents, and can be easily cleaned out.

COTTAM'S CAST-IRON SANITARY TRAP, from its improved construction gives a full water passage, and does not allow any smell to ascend from the drain.

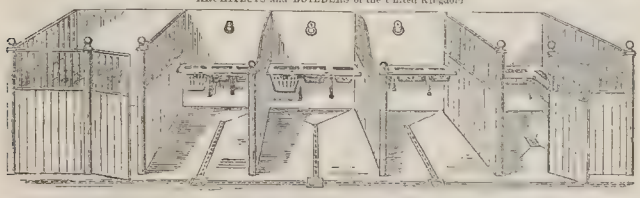
PATENT LOOSE-BOX FITTINGS, and every article for the harness-room and stable, kept in stock, plain, galvanised, and ornamental. Iron gates, fencing, hurdles, &c.

Illustrated Catalogues and Estimates gratis, upon application to

COTTAM & CO. 2, WINSLEY STREET, Oxford Street, London, W.

WHERE FULL-SIZED STALLS, LOOSE BOXES, AND HARNESS ROOM, &c. ARE FITTED UP, SHOWING ALL COTTAM'S PATENT IMPROVEMENTS, &c.

COTTAM & CO.'S only address in London, is 2, WINSLEY STREET, W.



N.B.—WINSLEY STREET IS THE STREET OPPOSITE THE PANTHEON.

INTERNATIONAL EXHIBITION, 1862.—CLASS 31.—PRIZE MEDAL AWARDED FOR

BARTON'S PATENT STABLE FITTINGS

AND ENAMELLED MANGERS.

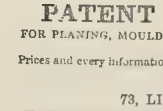
IRON-FOUNDERS, FURNISHING IRONMONGERS, GAS ENGINEERS, AND BELL-HANGERS.
Orders for EVERY DESCRIPTION of CASTINGS for ENGINEERS and BUILDERS promptly executed.
SPRING ROLLER BLIND MAKERS.
WILLIAM ASHDOWN, Manager.

HENRY DOULTON AND CO.'S
PATENT COMBINED SMOKE AND AIR FLUES.
BY THIS INVENTION PERFECT DRAUGHT AND COMPLETE VENTILATION CAN BE SECURED.

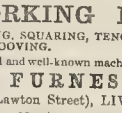
THE air-flue follows the line of the smoke-flue, the passages being quite distinct. The heat from the smoke-flue causes a current, which carries off the vitiated air admitted by junctions near the ceiling. The pipes or blocks are *all made to bond with ordinary brickwork.*

Where the blocks come together, each air-flue has a lip or projection, which enters the next block and completely shuts off the air-flue from the smoke-flue at the joint. This lip, with dowels at the opposite corners of the blocks, also holds the lengths firmly together.



Curves are made to suit any inclination.

Manufactured in terra cotta for smoke-flues equal to 12 in. 10 in. and 8 in. diameter, with ventilating-flues of proportionate size.



Small models will be forwarded to architects on application to
Henry Doulton & Co. High-street, Lambeth

DEVAUX'S VIEILLE MONTAGNE
THICK ROOFING ZINC.
This invaluable metal, if laid by Mr. TYLER on the new principle introduced by J. EDMISTON, Esq. F.I.B.A. will last as long as lead, at one half the cost
For Prospectuses, Samples, Models, and Estimates of Works to be done with the Roofing Zinc, in large or small quantities, in Town or Country, apply to
Mr. J. W. TYLER, 4, WOOD-STREET, WESTMINSTER, S.W.
If the Metal is laid by Mr TYLER, who has been so well known among Architects and Builders, superior skill and careful workmanship may be expended upon it, and a guarantee given for its durability, if the woodwork is prepared according to directions given.

PRIZE MEDAL.—INTERNATIONAL EXHIBITION, STAND 6129.
MUSGRAVE'S PATENT STABLE FITTINGS and HARMLESS LOOSE BOXES
MUSGRAVE'S PATENT IRON COW HOUSE FITTINGS and IRON PIGGERIES. These Inventions are confidently recommended as possessing many important advantages not to be found in any fittings made
At the late meeting of the Royal Agricultural Society at Leeds, MUSGRAVE, BROS. received a SILVER MEDAL at the two meetings of that Society previously held, "being the only prize conferred on any competitor in that class"

MUSGRAVE'S PATENT SLOW COMBUSTION STOVE. This Stove is the nearest approach to Warming by Hot Water, and an excellent Aid in Ventilation.

It will burn in Churches from Saturday till Sunday Evening, without attendance during the hours of worship. In halls will burn day and night for weeks, with little care Capable of warming a large apartment for twenty-four hours at a cost of Threepence; and deserving of special attention, because of its safety, healthfulness, and simplicity, and extreme simplicity
Full particulars will be sent on application to the Inventors and Makers
MUSGRAVE, BROTHERS, Ann-street Ironworks, Belfast.

PAPIER MACHE AND CARTON PIERRE WORKS,
49, RATHBONE PLACE, W.
GEORGE JACKSON AND SONS
(Established in 1780)

Beg the attention of Architects, Builders, Decorators, and the trade in general, to their large assortment of Enrichments for Ceilings and Cornices, in the Gothic, Elizabethan, Italian Renaissance, Louis XIV. XV. XVI. and many other styles; also rich or simple Panel Decorations, Elizabethan and Gothic Dados, Door Cups, Mouldings of all sizes, and to their varied selection of Centre Flowers for Ceilings, Gothic Bosses, Trusses, Column and Pilaster Caps, all executed in the highest style of art.

The large and lengthened experience of GEORGE JACKSON and SONS in decorations of Drawing and Dining Rooms, Libraries, &c. for Private houses, or of public buildings, in any of which they have had the honour of executing under Architects of the highest eminence, enables them with confidence to direct notice to that branch of their business.

Upholsterers are invited to inspect the large variety of Glass Frames, Tables, Cornices, Screens, Candelabra, &c. The large extent of their works, and the recent adoption of steam power for them, enable them to offer very superior advantages in materials and speed; while for design, quality, relief, and finish, they flatter themselves they stand unrivalled.

DESIGNS MADE FOR ANY WORKS

Revised and Corrected by New Calculations upon the present Value of Materials and Labour. Arranged by an Architect of eighteen years' practical experience. Measuring Surveyors. Illustrated and exemplified by Steel Engravings and numerous Woodcuts Royal 8vo price 8s. neatly bound.
London: published by T. KELLY, Paternoster-row; SIMPKIN and MARSHALL; and may be had of all Booksellers.
Of whom may be had, New Edition in Quarto, of the following Practical Architectural Works:—

1. PETER NICHOLSON'S PRACTICAL CARPENTRY, JOINERY, and CABINET-MAKING, Revised by TREDGOLD; being a new and complete System of Lines, for the Use of Workmen; founded on Geometrical and Mechanical Principles Ten parts at 3s. or in boards, 30s.; containing upwards of 120 Steel Plates, and numerous Woodcut Diagrams.

2. PETER NICHOLSON'S PRACTICAL MASONRY, BRICKLAYING, and PLASTERING (revised by TREDGOLD), both plain and ornamental; containing a new and complete System of Lines for Stone Cutting, for the Use of Workmen; the Formation of Mortars, Cements, Concrete, to which is added a variety of new designs for Mural Tablets, Tombs, Gravestones for Cemeteries, &c. &c.; and a description of the various materials employed. Ten Parts at 3s. or in boards, 30s., containing upwards of Ninety Steel Plates and Numerous Woodcuts.

3. TREDGOLD and NICHOLSON'S Theoretical and Practical Treatise on the FIVE ORDERS of ARCHITECTURE: containing plain and simple Rules for Drawing and Executing them, in the purest style, including an Historical Description of Gothic Architecture. Illustrated by upwards of One Hundred Steel Engravings, executed by Artists of first-rate talent, including numerous Diagrams, &c. Twelve parts at 3s. or in boards, 36s.

4. DESIGNS for COTTAGE and VILLA ARCHITECTURE: containing Plans, Elevations, Sections, Perspective Views, and Details, for the Erection of Cottages and Villas. By S. H. BROOKS, Architect. Beautifully engraved on steel, with Direction for Building, and the estimated Cost of each Edifice. Twelve parts at 3s.; or in boards, 37s.

5. DESIGNS for PUBLIC BUILDINGS, consisting of Plans, Elevations, Sections, Perspective Views and Details of Churches, Chapels, Schools, Almshouses, Gas Works, Markets, and other Buildings for public purposes. By S. H. BROOKS, Architect. Beautifully engraved on steel. Twelve parts at 3s. or 32s. boards.

6. THE HOUSE DECORATOR and PAINTER'S GUIDE: containing a series of Designs for Decorating Apartments with taste, and suited to the various styles of Architecture. By H. W. and A. ARROWSMITH, House Decorators to her Majesty. Ten Parts, at 3s.; or in boards, 32s.

7. THE HOUSE PAINTER, or DECORATOR'S COMPANION: containing a complete Treatise on the Art of House Painting, Graining, and Marbling, including the Origin of Colour, the Laws of Harmonious Colouring, the Manufacture of Pigments, Oils, Varnishes, &c. By W. M. HIGGINS, Esq. Accompanied by actual Specimens of Hard Wood Graining and Marbling. Ten Parts, at 3s., or in boards, 32s.

THE ENGINEERS' and MECHANICS' ENCYCLOPÆDIA, a new and enlarged edition, comprehending Practical Illustrations of the Machinery and Processes employed in every description of Manufacture of the British Empire. Illustrated by upwards of 2,000 Wood Engravings. By LUKE HERBERT, Civil Engineer, &c. The rapid progress of Mechanical Science has developed many of the important facts since the first publication, in 1836, of the Encyclopædia. The Inventions and discoveries recently made have engaged the sedulous attention of the Editor; for, as the value of each was tested by experiment, a description was accordingly prepared. By the selection of new articles and care in the revision of old ones, this edition has now become systematically enriched ... that it may be received as fully and faithfully expressing the existing state of Engineering and Mechanism, adapted to the wants of Practical Men." In two large 8vo volumes, cloth lettered, price 30s.

Preparing for publication, in Twelve Parts, price 3s. 6d. each,
THE FARM HOMESTEADS of ENGLAND: a Collection of Plans of existing English Home steads, carefully selected to illustrate the accommodation required under various Modes of Husbandry, with a Digest of Leading Principles in Construction and Arrangement.

The Bishop of London on the Parochial System—The Duke of North umberland and Church Extension—Stones of the Temple, No. IV. Gravestones, with illustrations—Churches Restored, &c. &c. Recent Grants in aid of Church Building—Quarterly List of Sermons, &c.
Also the Volume for 1862, price 1s. 6d limp cloth.
RIVINGTONS, Waterloo place, London.

Now ready, price 6s. in Roan Tuck Cover, Gilt Edges,
ADCOCK'S ENGINEERS' POCKET-BOOK, for the Year 1863. Being the Third after Bradley, or Last Year Centaur's Almanack and Diary Tablet of the times of High Water; List of the House of Commons; and Miscellaneous Information. Together with numerous and extensive Tables and Data for use in Mechanical and Civil Construction; Strength and Weight of Materials; Machinery; Mechanics; Hydraulics; Hydrostatics; Steam Engines, Chemistry, &c. Also, a List of the Members of the Institution of Civil Engineers, and of the Institution of Mechanical Engineers, with date of election, &c &c
London: SIMPKIN, MARSHALL, & CO. Stationers' Hall Court: and all Booksellers.

SCIENTIFIC RECORD of the EXHIBITION (PRACTICAL MECHANIC'S JOURNAL). Part 12, December 15, price 2s. contains: Electrical Instruments and Telegraph Apparatus, by C. W. Siemens, F.R.S. M.I.C.E.; Electro Deposition, by George Gore, esq.; Surgical Instruments, &c. by George Lawson, F.R.C.S. Surgeon Great Northern Hospital, &c.; Application of Photographs to Geodesy, by Sir Henry James, R.E. F.R.S., Photography and Photographic Apparatus, by Dr Diamond; Manufacture of Coal-tar Dyes, and Organic Preparations, by Wm. Odling, M.B. F.R.S. Illustrated by plate engraving of Messrs. Cooke & Sons' Turret Clock, and 70 woodcuts
London LONGMAN & CO Ludgate hill.
Proprietor's Offices (Offices for Patents), 47, Lincoln's-inn-fields, W.C.

Just published, Part I containing Five Plates, impl. 4to. price 8s.
MODERN ARCHITECTURE: ECCLESIASTICAL, CIVIL, and DOMESTIC. Illustrated by Views and Plans of Gothic and Classic Buildings executed since 1850.
By JAMES MURRAY, F.R.I.B.A.
This work will consist of Lithographic Views and Plans of Churches, Town Halls, Exchanges, Warehouses, Schools, Villas, Street Houses, &c. &c. and will be completed in Twelve Parts. Published Monthly. Subscribers' names to be sent to the Author, at 5, Warwick-green South, Coventry.

BUILDER'S PRICE LIST BOOK, 1863. Price 2s. 6d.
WILLIAM DAWBARN & CO Liverpool, have now ready their Builder's Price List Book for 1863, containing the prices of all Building materials, timber, slates, iron-ware, tiles, stone, glass, &c. &c. made up and corrected to the present date. The book contains sundry designs and useful calculations for builders generally
The price is 2s. 6d. to those who have no account open with W. D. & Co.; but persons desirous of opening an account, on giving satisfactory references, can have a copy posted free.

The Builder.

The Mausoleum at Halicarnassus Restored.

HE notion of perpetuating the memory of the great, when living, by the scale or splendour of the sepulchral receptacle, when dead, has prevailed amongst all nations from the earliest ages. Public gratitude and private affection have ever prompted this natural mode of expressing respect for the memory of national benefactors or cherished relatives; and from the gigantic pyramids of Egyptian dynasties, to the rudest gravestone of the village churchyard,

"Where heaves the turf in many a mouldering heap,"

the custom testifies to the universal sentiment.

Where more ennobling reasons, however, are wanting, pride of wealth or pedigree affords a powerful motive, and the costliness of the tomb is too often with the world an apology for the obscurity of the dust it covers. But in no instance on record has its splendour conferred so enduring a vitality upon the name of its occupant as in that erected by the second Artemisia, Queen of Caria, to the memory of her husband. But for this the name of Mausolus would have received no more than a passing record, as that of the dynast of a petty state of Asia Minor; whereas now it is for ever associated with all that is solemn, vast, and impressive in the architecture of the tomb. Lucian fully appreciates the cause of the celebrity of Mausolus, when, in one of his humorous Νεκρικοὶ Διάλογοι, or "Dialogues of the Dead," the shade of Mausolus is made to found his chief claim to memory upon having a prodigious monument raised over him at Halicarnassus, which had not its equal in the whole world. But it was not its size alone that ranked it among the seven wonders of the world, but principally the beauty of its form and excellence of its sculptured enrichments, being decorated, as the shade continues to say, with figures of men and horses, of the most admirable art, and wrought in the finest marble. Pliny, too, who alone furnishes anything like a description of it, though by no means a clear one, ascribes its chief merits to the sculptures of Scopas, Bryaxis, Timotheus, and Leochares; and Vitruvius reiterates the story, only substituting Praxiteles for Timotheus. "The Pyramids of Egypt and Walls of Babylon," says Mr. Fergusson, in his work now before us,* "were wonders only because of their mass or their durability. The palace of Cyrus or the Hanging Gardens of Babylon may have been rich in colour and barbaric splendour, but we know enough of Assyrian and of Persian art to feel convinced that the taste in which they were designed must at least have been very questionable. The Colossus at Rhodes and the statue of Jupiter at Elis, whatever their merits,—and of one, at least, of them we can believe anything,—did not belong to architectural art. The Temple of Ephesus may have been beautiful in itself, but it became a wonder only from its size, as the largest of Greek temples. But the Mausoleum, which covered not more than one-sixth or one-seventh of its area, could have been remarkable only because it was beautiful, or in consequence of the elaboration and taste displayed in its ornamentation."

Of all the themes that have engaged the attention and exercised the ingenuity of scientific men, none has elicited a greater variety of opinions than the restoration of this renowned masterpiece of antiquity from the scant description and conflicting dimensions of Pliny. How could a building only 63 feet in length, and shorter in width, have a circumference of 411 feet? How could a pteron, 37½ feet in height, and a pyramid above it, also 37½ feet in height, make up a total of 140 feet? Well might the speculations of architects have produced results so widely differing. Yet had not this description been extant, anything like a correct restoration would have been an impossibility, as neither the character of the design nor the magnitude of the work could have been inferred from the existing remains. The only other definite statement that has come down to us is that of Hyginus, a grammarian of the first century, and to which Mr. Falkener first called attention. Hyginus speaks of it as "*altum pedes* 80, *circuitus pedes* 1340." Vitruvius describes its locality, but neither form nor size, and simply refers to a work upon it by the architects Satyrus and Paytheus, doubtless then extant, but now lost. Pausanias and Lucian vaguely speak of its splendour; and Martial, more vaguely still, hints at some peculiarity in its form or construction, by an allusion to its "hanging in empty air."

All other notices, from Strabo to the Byzantine writers, are but incidental, but at the close of the twelfth century we find it still standing, and seemingly in good condition, as Eustathius then says of it, θαῦμα καὶ ἦν καὶ ἔστι "it was and is a wonder." Such are the aids given us by ancient writers.

But though all notice of the monument here ceases, we have reason to believe that it retained much of its pristine glory to a later period. For the rest, we know that it shared at length the destruction that fell upon the cities and monuments of Asia Minor; that in 1402 the Knights of St. John took possession of the town, then called Mesy, now Budrum, and supplied themselves with stone and lime from the tomb for the fortress which they constructed on the rocky peninsula in the harbour; that on the visit of Cepio, in 1472, remains of the monument were shown him, amid the ruins of the city; that in 1522 the remains were again employed for the repairs of the fortress; that from the time of Thévenot certain sculptured slabs, supposed to have belonged to the Mausoleum, are described by travellers as inserted in the castle walls; and that, finally, in 1846, Lord Stratford de Redcliffe obtained permission to remove them, and presented them to the British Museum, where they now are. The fixing on the site of the Mausoleum was the next step: to Professor Donaldson belongs the honour of indicating it, and to Mr. Newton that of determining it.

"What the squaring of the circle is to the young mathematician," says the author, "or the perpetual motion to the young mechanician, the Mausoleum of Halicarnassus was to the young architect; and, with the data at his disposal, the problem seemed as insoluble as the other two." Plans of all forms, square and round, oblong and polygonal, were projected to meet the circumstances, but had only one thing in common,—"they were all wrong; some more, some less so, but none seizing what now turn out to be the main features of the design."

So things might have remained had not the sovereign remedy that found a name for

"The nameless column with a buried base"

on the Roman Forum, supplied an aid to the finding a shape for the marble enigma at Halicarnassus. The story has lost its novelty, but not its interest; the problem is probably not yet solved, perhaps may never be, unless, indeed, the MS. of Satyrus and Phytheus should come to light.

The first result of the possession of these marbles was the publication of a memoir by Mr. Newton, in conjunction with Mr. Cockerell, in the "Classical Museum," in 1847, in which he endeavoured to determine what has since proved to be the true site of the building. Passing by the speculations which the herd of commentators upon Pliny and Vitruvius have indulged in, he pauses upon the chief features of the restorations of such higher authorities as Caylus, Choiseul Gouffier, Quatremère de Quincy, and Leake, all more or less objectionable, but all of which, nevertheless, were based on the "inartificial scheme" of placing the thirty-six columns round a solid structure in a single row,—since found to be correct. Incorporated with the memoir were the remarks and the restoration of Mr. Cockerell, the best that had hitherto appeared, and which may be considered the type of what has followed. It consisted of a cella, with eight columns on the flanks, and six on the fronts, the flanks being doubled; or, in technical language, was peripteral, dipteral, pycnostyle in the flanks, systyle in the fronts. Not to be outdone in ingenuity, however, M. Texier afterwards propounded a circular plan upon an African model, and Mr. Fergusson an octagon upon an Indian type.

Mr. Watkiss Lloyd next suggested certain improvements upon Mr. Cockerell's design. Objecting to the length of the cella, he remedied it by continuing the dipteral arrangement all round; but to do so had to take a column from each flank,

* "The Mausoleum at Halicarnassus Restored in conformity with the recently-discovered Remains." By James Fergusson, F.R.I.B.A. London: Murray.

leaving an odd number. For elevation he took away the attic and gave its height to the podium, the proper place, as he thought, for the sculptures of Leochares and his companions, but of which Gerhard, of the *Archæologische Zeitung*, considered those of Budrum had never formed part, their beauty not being above mediocrity, and their dimensions not compatible with such a situation.

The next restoration worthy of note was that of Mr. Falkener, published in the "Museum of Classical Antiquity," who unhesitatingly adopted the general features of Mr. Cockerell's suggestion and Mr. Lloyd's amendment. Accepting the Budrum slabs as belonging to the frieze, he, *ex pede Herculem*, entered into minute calculations of the probable heights of the various members of the order from the mean of ancient Ionic examples, and by the same method arrived at the intercolumniation. But the main feature of his restoration consisted in a novel interpretation of Pliny's *circuitus*. Arguing from analogy, he rejected the notion of the 411 feet applying to the circuit either of tomb or enclosure, but applied it to the *latus longius* of the *peribolus*, and, by allowing 259 feet to the *latus brevius*, obtained the *circuitus pedes* 1340 of Hyginus.

And now that great event occurred in the history of this long argument which was to consign to oblivion many an old theory, level to the ground many an absurd fabric, and supply a foundation to work upon more substantial than the slipshod description of the most versatile, most uncritical, and most credulous of compilers. The spade had achieved what the pen had failed to effect; the objections of Spratt and Ross had vanished like mists before the sun, and the standard of Newton was erected in the centre of the "*platea ampla longitudine facta, in qua media mausoleum egregiis operibus factum est.*"

It was upon the 1st of January, 1857, that the first spadeful was upturned on the true site of the Mausoleum, and the first restoration that marked the new era was that of Lieutenant Smith, the officer commanding the engineers attached to the expedition. An authority in art, at the close of 1858, thus records his opinion of it:—"The utter overthrow and the dispersion of the materials of the tomb have indeed rendered it impossible for us to discover beyond dispute what the design originally was. But the fragments are so numerous and so characteristic, the accounts handed down to us from antiquity are so clear, and the analogy of other sepulchral monuments of the same date leaves so little room for doubt of the correctness of Messrs. Newton and Smith's suppositions, that it may fairly be said that these gentlemen have set at rest satisfactorily and for ever the discussion as to the general outline of the building, as they have unquestionably done as to its position."

The details, however, of the restoration were not to be permitted to slumber so easily. The restoration by Mr. Pullan, founded upon that of Lieut. Smith, and incorporated in Mr. Newton's work (reviewed in our pages in March last), and indorsed by the latter, has found a formidable opponent in Mr. Fergusson.

The main points in Mr. Pullan's argument are: that the quadrangular cutting on the site of the Mausoleum contained the foundations of the tomb itself, as described by Pliny; and that his *totus circuitus* of 411 feet refers to an area contained within the larger circumference of the quadrangle; that the fragments of wheel and portions of horses belong to the group of the quadriga; that the steps found on the north side of the *peribolus* are parts of those of the pyramid. Making Pliny's dimensions the basis for the whole, he adopts the generally received form of a pteron or peristyle standing on a podium, supporting a pyramid crowned by a quadriga; and divides the total height of 140 feet by giving 37 feet 6 inches to the pteron, 37 feet 6 inches to the pyramid and quadriga, and the remaining 65 feet to the podium. In support of his theory, in the passage "*supra pteron pyramis altitudine inferiorem æquavit*," he changes *altitudine* into *altitudinem* by the addition of a letter, and thus creates the substantive wanting. This is certainly dealing with the *letter* if not the spirit. Logically, "*pyramidem*" may be inferred; but practically, *partem;* and if so, must it of necessity refer to the pteron, because the only part previously mentioned? We think not. By this means Mr. Pullan's podium becomes enormously disproportioned to the peristyle. With regard to plan, he constructs a building of which the platform at the top of the pyramid is 25 feet 6 inches by 20 feet 5 inches, the *cella* 63 feet by 62 feet, surrounded by a peristyle 100 feet long from centre to centre of columns, from east to west, and 80 feet from north to south, the *pteroma* being double the width at the fronts to what it is at the flanks. The *podium* he makes 119 feet by 88 feet 6 inches at the die, thus projecting almost four times as much beyond the pedestal at the fronts as at the flanks; the most disagreeable feature of all.

Exact information being wanting with regard to the lower part, he commences with the top. How the size of the platform, the height and spread of the pyramid, the height of the order, position of the columns, dimensions of the cella and peristyle, position of the lions, size of the podium, internal arrangement of the tomb, domical structure of the roof, and all the other points of the restoration were arrived at, are detailed by Mr. Pullan in the sixth chapter of the book, and in Mr. Newton's summary in its favour in the seventh.

Mr. Fergusson's first objections were expressed in our pages at the close of 1859, in anticipation of Mr. Newton's book, but were then confined to a new interpretation of the words "*in metæ cacumen se contrahens*," by supposing the pyramid to have been curvilinear instead of straight, a doubt of the similarity of width of the treads having given rise to it. After an answer from Mr. Pullan, also in our pages, and a rejoinder from Mr. Fergusson, the matter dropped. Mr. Pullan's restoration was published, and Mr. Fergusson's dissent assumed a fuller embodiment. In his preface he disclaims for his essay all pretensions to being a full account of the Mausoleum. Like David, he meets his Goliath with but a sling and a stone, opposing a thin quarto volume to the ponderous folio of his antagonist. All he has attempted in the present instance is to recapitulate and explain the various data which have recently been brought to light, and to show in what manner they may be employed, so as to perfect the solution of the riddle which has so long perplexed the student of classical architecture.

The first impression from Mr. Fergusson's design is that one condition at least has been attained—beauty; the first from Mr. Pullan's is that that condition is entirely wanting. The first feelings of pleasure or disappointment over, the uncomfortable conviction grows upon us that the exuberant invention in the one and the total want of it in the other, have equally missed the mark, and left the problem unsolved. With all this is a feeling of congratulation that in many essential points they accord with each other; and that in spite of difference of opinions, they are both much nearer the mark than their predecessors. Facts are incontrovertible, and the following results of the excavation must form a groundwork for all in future to build upon, viz.: the area laid bare of 127 feet by 108 feet, paved with blocks of green stone, and sufficiently corresponding with Pliny's dimensions of the pteron; the portion of chariot-wheel and horses, that may presume a height of 13 feet or 14 feet for the group; the general form of the pyramid from the indisputable evidence of its steps; the restoration of the entire order, and the coincidence of the height of the same with the 27 cubits of Pliny; the peripteral arrangement of the thirty-six columns, eleven to each flank, nine to each front; the application of the 63 feet to the longer side of the cella, that of the 411 feet to the circuit of the whole structure, and that of the 1,340 feet of Hyginus to the circuit of the peribolus, the existence of which is also ascertained; lastly, the identity of the slabs from the castle with others found *in situ*. These leading data govern both restorations, but with what different results!

To the three materials existing for a restoration, *Scripta*, *Reliquiæ*, and *Exempla*, Mr. Fergusson adds *Rationes*, or the system of definite proportions in Greek architecture, a system first propounded by Cesare Cesariano, in his version of Vitruvius, in 1521, in which he showed how a system of triangles explained the dimensions and peculiarities of design of Milan Cathedral. This system, and others founded on it, have been applied to numerous other Gothic cathedrals, with more or less success.

"It has, however," says the author, "long been suspected that the Greeks proceeded on a totally different principle; but materials did not exist for a satisfactory elucidation of the question till Mr. Penrose published his exquisite survey of the Parthenon and other buildings at Athens made for the Society of Dilettanti, and Mr. Cockerell the result of his explorations at Bassæ and Egina. In the first-named work, its author pointed out with sufficient clearness some of the principal ratios of that celebrated building, which his survey enabled him to verify, and for others he supplied dimensions which, for completeness and accuracy, left nothing to be desired. With these new materials, Mr. Watkiss Lloyd undertook the investigation, and by a long and careful series of comparisons he has proved that the time-honoured doctrine of the Vitruvian school—that the lowest diameter of a column was the modulus of every other part of a building—had no place in Greek art; on the contrary, that every part of a Greek building was proportioned to those parts in juxtaposition or analogy to it, in some such ratio as 3 to 4, 4 to 5, 5 to 6, and so on,—not by accident, but by careful study; and the whole design was evolved from a nexus of proportions as ingenious in themselves as they were harmonious in their result."

All this, however, has been set forth in our pages: and the application of this system to the present subject we have not space to expatiate upon; but the author has gone into it with great minuteness, and it is well worth a careful study. The result is interesting, but the coupled columns at the angles will prove an objection to many nevertheless.

A chapter on Greek measures introduces another point which the author considers of great importance; and the difference between the Greek and English foot, though minute, is of moment in the calculation. The dimensions of Pliny are, of course, in the former; those quoted in the excavations in the latter. The length of the Greek foot is best calculated from the Roman, and the latter was ·972 English; therefore, as the ratio between the Greek foot and the Roman was as 25 to 24, we find that 101·25 English feet are equal to 100 Greek feet. This being almost identical with the mean between two slightly different results obtained by Mr. Penrose in his measurements of the upper step of the Parthenon and the Naos, the author uses it throughout the work. As regards what he considers one of the most important elements for the restoration, namely, the steps of the pyramid, the utmost minuteness is of consequence, and considering it a most wonderful coincidence that Mr. Pullan's wider step of 21 inches, and his narrower one of 17 inches, English, should come out without fractions either way, after minute personal measurements at the Museum, he adopts the latter dimension as correct, but uses the former as a dimension of 21 inches Greek, or 21·2625 English inches. After this arguing upon the probability of the Babylonian cubit—acknowledged of 21 inches—being used in Caria, he urges, upon the strength of the widest step being the modulus for the whole building, the convenience of considering the measure of 21 inches as equal to 1 Babylonian or Halicarnassian cubit, and calling it so accordingly.

Next in importance to the steps of the pyramid are the fragments of the cymatium. Several of these were found, averaging 21 inches in length, and each having a lion's head, or the mark of one, to cover the joint, and each head therefore 3 feet 6 inches from centre to centre. The closeness of these heads suggests the notion of every other column

only having one over its centre, thus making the intercolumniation 8 feet 9 inches. But, besides being unexampled and complicated, the author cannot make it suit any arrangement of his pyramid steps. Assuming eleven intercolumniations by seven for the sides of the pteron, we obtain 96 feet 3 inches by 61 feet 3 inches from centre to centre of angle columns, to which, supposing the sides of the pyramid to be in the ratio of 4 to 5, we cannot fit it. Assuming, on the contrary, ten intercolumniations by eight, we should obtain 87 feet 6 inches by 70 feet; and adding 2 feet 9 inches each way—the projection of the first step of the pyramid beyond the centre of the angle column—we should have for its base 93 feet by 75 feet 6 inches; therefore, with the evidence before us, neither of these suggestions seems tenable. Advancing 1 cubit beyond this we come to 6 cubits, or 10 feet 6 inches Greek from centre to centre of every column, and the lions' heads then range symmetrically one over each, and two between each pair.

The addition of a plain piece of cymatium between every two of the stones actually found would have reduced the excessive number of heads to the ordinary, and fixed the intercolumniation at 10 feet 6 inches absolutely; for a stone found with a lion's head upon it 1 cubit from the angle creates a difficulty, as it does not fit with the arrangement. But no such plain pieces were found. The principle of definite proportions, however, again comes to the rescue:—

"As we have just found that six pyramid steps, or 6 cubits, are equal to one intercolumniation, so six intercolumniations, or 36 cubits, is exactly 63 Greek feet,—the '*sexagenos ternos pedes*,' which Pliny ascribes to the cella or tomb; it is further proved that this was not accidental, by our finding that twice the length of the cella, or 126 Greek feet, or 72 cubits, is or ought to be the total length of the building, measured on its lowest step. This, as before mentioned, Mr. Newton quotes, in round numbers, as 127 feet English; but as neither he nor any of those with him had any idea that any peculiar value was attached to this dimension, they measured carelessly and quoted loosely. My own conviction is that it certainly was 127 feet 6½ inches English, which would be the exact equivalent of 126 Greek feet. At all events, I feel perfectly certain that the best mode of ascertaining the pyramid step would be to divide this dimension, whatever it is, by 72."

With regard to the pteron, the evidence demands the allotment of eleven columns to the flanks, and nine to the fronts, as adopted by Lieut. Smith and Mr. Pullan. But, ten intercolumniations of 10 feet 6 inches give 105 feet; which, with 2 feet 9 inches at each end for the projection of the first step of the pyramid beyond the centres of the columns, makes 110 feet 6 inches,—a dimension to which it is almost impossible to extend the pyramid; and, moreover, with a cella only 63 feet long, leaves 21 feet at each end, from centres of columns to cella to be roofed over, a difficulty which the Greeks could scarcely have surmounted. After trying several expedients, Mr. Fergusson solves the question by coupling the angle columns, or giving them half an intercolumniation, or 5 feet 3 inches from centre to centre.

On the subject of the *lacunaria* we can say but few words. Of the transverse beam between the architrave and the cella only one fragment was discovered, 4 feet 6 inches in length. A lacunar stone was also found, 6 feet 2⅝ inches long, 2 feet 8¾ wide, and 10 inches thick. The details of this stone prove the length of one side of a panel to be 4⅜ feet, and as the space between Mr. Pullan's transverse beams of the flanks is 7 feet 10 inches, it must have been a shorter side, and the *lacunaria*, therefore, oblong, and running lengthways with the *cella*. Now the length of this stone being 6 feet 2⅝ inches, the space between the centre of the columns and the architrave of the *cella* on the flanks may be taken as 8 feet 6 inches; and the width of the peristyle, from centre to centre of columns, being 80 feet, allowing 6 inches for the pilaster on each side, the width of the *cella* would be 80 feet short 18, or 62 feet. The length of the *cella* being 63 feet, it is virtually but not actually square, and the "*brevius a frontibus*" just observed by a foot. To meet the wide span of 17 feet at the fronts, he concludes that the transverse beams and *lacunaria* were supported by main beams of large dimension, level with the architraves.

Such is Mr. Pullan's scheme. By Mr. Fergusson's arrangement the span at front and rear is 2 feet 8 inches less, therefore these main beams are not required. As to the lacunar stone, he finds no difficulty in finding a place for it, and lays small stress on its evidence. He obtains four large square panels at the angles, but on the other hand has long ones in the fronts, and short ones in the flanks, whilst Mr. Pullan's are the same size throughout.

But to attempt to explain the various calculations by which the author obtains his conclusions would be to re-write his essay, as it is a book of figures with but little narrative; and as his object has been to render his arguments as concise as possible, to condense them further cannot make them clearer, but may mar their meaning. We have given the gist of one or two of them as specimens of his masterly grasp of his subject, and for the rest must content ourselves with their results. The general idea of the pyramid pretty well coincides both in Mr Pullan's and the author's restorations. The former obtains a platform 25 feet 6 inches by 20 feet 5 inches, and a lower step 105 feet 5 inches by 85 feet 5 inches English; the latter a platform 20 feet by 16 feet, and a lower step 100 feet by 80 feet Greek. The former places the two narrow steps at the top, the latter at the bottom, and doubles the height of the lowest one to raise them above the cymatium, with which addition the pyramid is 1 foot higher than Mr. Pullan's. Upon this platform Mr. Pullan at once places his chariot group, without the presence of an intervening pedestal, in spite of want of precedent, poverty of the conception, and impossibility of seeing more than a portion of the crowning feature of the structure. Mr. Fergusson, on the contrary, with the Lion Tomb at Caidus before his eyes, elevates his group upon a pedestal of such area as shall just contain it and no more. Of the beautiful effect produced by this interpretation of the *metæ cacumen* there cannot be two opinions, but its influence in the division of Pliny's 140 feet extends to the whole design. Mr. Pullan makes the pyramid, *with the addition of the quadriga*, equal to the pteron, but has to give 65 feet to the basement. Mr. Fergusson makes the pyramid, *with the addition of the pedestal*, equal to the pteron, and the pyramid pedestal and quadriga equal to the basement, which thus becomes only 51 feet high, and thus meets two readings of Pliny at once. But so singularly do his dimensions dovetail, that after making the entablature of the basement a proportionate height, he was surprised to find he had again obtained the height of the pteron (37 feet 6 inches) for the remainder. If this solution of Pliny's meaning can be reconciled with the evidences that we possess, and the author believes that it can, the huge basement that so sorely tries our faith assumes proportions far more consistent with probability; but for the matter of its arrangement, the most we can say is, that in the absence of all proof as to what it was, he has given a charming notion as to what it might have been.

This is undoubtedly the part most open to criticism, as he had but little to guide him beyond his imagination, which, fortunately, is a fertile one; but the tombs of Mylasa and Xanthus seem to point to another treatment. The story told by Guichard, in his work on the Sepulchral Rites of the Ancients, of the descent of the Knights of St. John into the tomb, in 1522, and the architectural wonders they saw there, has given the clue, in Mr. Fergusson's mind, to the mystery. Considering the monument altogether exceptional, he makes the building as ornate within as without, and in place of the two circular vaulted chambers, without light, air, and ornament, with which Mr. Pullan occupies his pteron and his podium, presents us with two spacious quadrangular halls of equal size, lit by openings, and with trabiated ceilings supported by columns. The walls of the cella are pierced by four windows at each side, and a door at one end leading on to the pteroma. As regards the basement, the side walls of the lower chamber, which carry those of the cella, assume the form of massive piers with alternate openings, which admit a subdued light borrowed from the external wall which supports the peristyle, and which is likewise formed of corresponding piers and openings,—a peristele (from *στήλη*, a stele) beneath a peristyle (from *στυλος*, a column),—the space beneath the *pteromata* forming a corridor encircling the lower hall. For the actual tomb of the monarch, the excavated stairs and the big stone at the west end may indicate the whereabouts.

The sculptures found, besides those of the chariot group and the three friezes, consisted of a fragment of a colossal equestrian figure, fragments of several statues larger than life, fragments of some twenty lions, and some portions of square tablets. For the chariot group, he thinks it a question if, instead of standing parallel with the pedestal, it may not have faced the south side—the principal approach. The friezes he allots, one to the order, one to the basement, the third—the chariot race—to the cella. The statues he places on the peristele—one to each opening. The lions, standing, are placed on pedestals, which form part of a continuous broken stylobate round the podium, seven on each flank, — five to the west front, two to the east. That they played an essential part in the design is evident from their number. Here, then, they do so; in Mr. Pullan's design they do not. In addition to these twenty-one, the author adds two of larger size, couchant, on each side of the portal, and four more on pedestals at the angles of the roof. On the eight larger pedestals at the angles of the building he proposes to place prancing Amazons, but suggests for the four facing the main approach the restitution of the celebrated Monte Cavallo groups, which *possibly* formed part of the statues of which Cicero accused Verres of robbing Halicarnassus.

In concluding, we cannot divest ourselves of the conviction, that though the distance from the truth is greatly lessened, the goal is not yet attained. We should, nevertheless, be loath to place the solution of the problem amongst those things that Time has fatally obscured:—"*Res vetustate nimiâ obscuras.*"

NEW MATERIALS FOR THE LIFE OF THOMAS BANKS, R.A.

WHEN my father entered into an engagement with the late Mr. Murray, of Albemarle-street, to write the well-known "Lives" which bear his name, he sought assistance at all hands. Lavinia, the only child of Banks, the sculptor, became one of his correspondents. She was the widow of the Rev. Edward Forster, and was, as her letters evince, a clever woman:—

To Allan Cunningham, esq.

"Paris, February 12th, 1830.

SIR,—I hasten to acknowledge having been favoured with your letter of the 6th instant, but am as yet unprepared to give a satisfactory reply either to the first or the second part of it. I am fully aware of my obligations to Mr. Chantrey for having so long given house-room to the models, &c., belonging to me, which Mr. Rossi entrusted to his care, and which it never was my intention should have encumbered his premises so long; but various circumstances have hitherto prevented me from taking any measures towards their removal, and I am now perplexed to know what to do with them, or where to remove them. I doubt not that many may now be injured, and possibly of but little value. I have been searching among my mother's papers for a list of them, which I doubt not Mr. Rossi transmitted to her at the time of their removal, but without success; and I am sorry to say her memory is now so defective as not to be able to assist mine at all as to the individual contents of the hampers, &c. The moulds, as nearly as I can recollect, were pre-

served as being those of busts of Horne Tooke and Warren Hastings, which it was thought might be of some value in future; but those, of course, I cannot have a wish to retain, as being much too cumbrous for any one not having extensive premises. I should be sorry to part with any of my father's models; but I regret to add that I cannot at this moment fix on any friend whom I could trouble to look over, and select and pack them. All the terra-cottas were models made by my father in Italy, and are valuable to me. I feel much indebted to Mr. Chantrey for his kind offer of assisting in the selection of such as appear to possess the most merit. Some of them I have an affection for, as being associated with recollections of my early childhood; and I still hope to meet with a list of the whole, so as to designate those I should grieve to have disposed of.

I will write by this courier to my friend Mr. Philip Hardwick, of Russell-square, and consult him on the subject: perhaps he can suggest some means of *housing* them, until I can visit England myself, a measure I have wished to put in practice ever since the death of my husband; but the increasing infirmities of my poor aged mother render it impossible that I should leave her, even for a day. I cannot, therefore, absent myself for any time, however urgent the cause of it might be.

On the *second* subject in your letter, I shall have much pleasure in communicating to you whatever I can; and will endeavour to collect my thoughts on it, and give you what information I can glean. The little sketch in *The Gentleman's Magazine* was drawn up by me, but I cannot recollect exactly in what year, and I have no copy of it. My poor mother's memory is now so impaired, that I find I cannot rely on any information from her, and I am almost ashamed to confess that, from my having lived so long out of England, many recollections are obliterated, which a continued intercourse with the friends of my youth would naturally have kept up, had I remained among them.

Yet I love to dwell on everything connected with the memory of a father whom I had so much reason to be proud of, and to be affectionately attached to, and I shall perform the little task you have assigned me with real pleasure, though not, I fear, with sufficient ability to prove of much service to you.

We have not any letters of his, or of any correspondents. I will look if there be not a few scattered observations on the Antique, written during his residence at Rome. I can, if you wish it, transmit to you some passages from my *deeply-lamented friend* Sir Thomas Lawrence's letters to me, expressive of his veneration for my father's talents, which may be interesting in such a work as yours.

There is a bust of my father, I should think, among the models at Mr. Chantrey's. There is also a very good picture of him by Northcote, which I think Mr. Hardwick can give you information of,* for I do not at present know in whose possession it is. Mr. Dance made a drawing of him which was etched (engraved) in his collection of Portraits, and I have a slight chalk profile of him, done a few months before his death by Flaxman, when we were passing an evening at his house. This is the most valuable of all in point of likeness, but how could you have it? I am, &c., LAVINIA FORSTER."

Flaxman sat to Banks; the head was engraved for my father's Life of Flaxman:—

To Allan Cunningham, esq.

"I will endeavour to send you, in the course of the week, the drawing of my father by Flaxman, which I think so infinitely preferable to any other resemblance of him, that I should wish it to be engraved, rather than that in the possession of Miss Flaxman, which I recollect was done some years previous to mine, and which my mother reminds me, by an extraordinary return of memory, was drawn one evening at my house in North Audley-street. I will send it by the conveyance you point out."

To the same.

"I send you my father's portrait by Flaxman, in which the only defect is want of height in the forehead, and consequently of capaciousness in the upper part of the head; if that could be added in the engraving, it would be perfect.

You will also find the catalogue of his works, and the list of the different articles you received from Mr. Rossi in 1822.

I inclose a list of the articles I am most desirous to retain. Others will probably be selected by Lord and Lady Nugent, and by Mr. Hardwick.

I have no letters whatever, nor do I believe my father was ever in habits of correspondence with Flaxman; he admired him greatly, and thought most highly of his genius, but used to say, all his pleasure in his society was destroyed when Mrs. Flaxman was present, for she was affected and pedantic."

What follows relates to the original model of the *Boothby* Monument, now in the Soane Museum:—

"Mrs. Forster presents her compliments to Mr. Allan Cunningham. She has heard from Lady Nugent respecting the removal of some of the models Mr. Chantrey has been so good as to take charge of for her; and has decided on requesting Mr. Soane to accept that of Sir Brook Boothby's daughter, and writes to Mr. Hardwick to this effect by to-day's courier."

The following letter, full of interest, explains itself:—

To the same.

"Paris, March 1, 1830.

"Sir,—In compliance with your request I have endeavoured to recollect various little incidents that may tend to illustrate my father's habits and occupations, but fear you will find them very imperfect, and probably too much mingled with *self* to be made use of without considerable pruning; but I have noted them down as they have occurred to me, and I regret that I have not now any one at hand to assist me in retracing some of the early events of my life, which might have been interesting as connected with my revered parent. My mother's memory is now so lost that I cannot rely on anything she relates unless I also have a recollection of the circumstance. Not having either any memorandum of the little biographical sketch which appeared in the *Gentleman's Magazine*, I cannot now retrace the order or the number of his public works, which I believe are therein enumerated. To that, of course, you will refer for principal facts, and I will do my best in giving you some further information, relying on your indulgence for the style as well as desultory manner in which it will be given. I never knew the name of my grandmother before marriage, nor does my mother recollect it. She resided at Hampton Court with her second son, Mark Banks, who was an architect and had a house there, in consequence of his situation in the Board of Works. The youngest son, Charles, studied sculpture, and was instructed principally by my father; but he died young, and was not, I believe, very industrious, therefore nothing remains of his talents in his profession.

My mother's maiden name was Wootton; her father died when she was a child, and her mother was left with two unmarried daughters, having a small landed property in that part of the then *vicinity* of London, known by the name of May Fair. Two or three years after their marriage my father and mother went to Rome, he being sent thither as a student at the expense of the Royal Academy; and finding his residence there pleasant, he continued four years longer than the time usually allowed by that institution, remaining in all seven years. On his return to England he took a house in Newman-street, in which he continued to reside until his death; but finding his talents not sufficiently appreciated during the first few years after his return from Italy, he determined on making trial of Russia; and took with him a beautiful statue of "Cupid tormenting a Butterfly," for which the design had been made in Rome. This he disposed of to the Empress Catherine II., who had it placed in her summer palace at Czarsiozelo. He also executed for her a bas-relief, emblematic of "The Armed Neutrality;" but finding his health much impaired by the climate, and preferring his native country, he unexpectedly returned, just as my mother was preparing to join him at St. Petersburg, with me. It was after his second return to England that he modelled the colossal statue of "Achilles mourning the Loss of Briseis, which now graces the hall of the British Gallery in Pall-mall, and was presented to that institution by my mother after my father's death. One instance of his fortitude and strength of mind under misfortune may be adduced from his patient resignation on the apparent destruction of his hopes of distinguishing himself in the eyes of a British public, in the demolition of that figure. It had been the laborious occupation and incessant study of nearly twelve months, to complete the model; and when cast in plaster it was conveyed to Somerset House for the purpose of being exhibited in the exhibition of the Royal Academy, but on its way thither the sledge or carriage on which it was conveyed met with some accident, and the figure was shattered into a thousand fragments. He returned at his usual hour to dine with his family, bereft of every hope that this statue, on which his expectations of future celebrity had been fondly built, could ever be restored to its original form; he did not impart his vexation to any one; he returned to the Academy to endeavour to assemble the scattered pieces, and by unremitting labour succeeded in getting them together; nor was it until his hopes revived of recovering its pristine appearance that he informed his wife of the accident that had occurred. The statue was to have been executed in marble for Colonel Johnes, and placed in the hall of his princely house at Hafod, in Wales; but subsequent circumstances prevented the completion of that order, although a block of marble of suitable dimensions had been procured from Carrara expressly for its execution. Other works, however, were undertaken and completed for that distinguished amateur, some of which were unfortunately consumed when that noble mansion was destroyed by fire. One of these was a group of 'Thetis dipping Achilles in the River Styx,' placed over a magnificent vase in the conservatory, the heads being portraits of Mrs. and Miss Johnes. The owner of this beautiful place was very partial to my father, and loved the simplicity of his character. For several successive years he was a visitor at Hafod during part of the summer, and there revelled in undisturbed enjoyment of the sublime scenes with which that picturesque spot abounds.

When in Rome, he executed a basso-relievo for the late Marquis of Buckingham, representing 'Caractacus pleading for his Liberty before the Emperor Claudius.' It is placed in the entrance-hall at Stowe, in Buckinghamshire (the terra-cotta model is at Mr. Howard's, in Newman-street). The exquisite design for a monument to the memory of the daughter of Sir Brook Boothby, which was erected in the church of Ashbourne, in Derbyshire, excited a very marked sensation at the time it was exhibited at Somerset House. The marble figure was placed in the centre of the council-room, and attracted a crowd of admiring spectators. When her Majesty Queen Charlotte, attended by the princesses her daughters, visited the exhibition, as it was customary for the Royal Family to do previous to its being opened to the public, they were particularly interested by this lovely little composition, stood over it for a considerable time in silence, and were affected even to tears. While the work was in hand, Sir Brook used to come almost daily to watch its progress, and often wept as he stood beside my father while he was employed on it; for it was one of his productions on which he bestowed much of his own labour, finishing almost every part of it in the most careful manner with his own hands. Mr. Chantrey borrowed of my mother the drawings and original designs for this composition, when about to execute his monument to the memory of two children, placed in Litchfield Cathedral.

My father's greatest delight and solace, after his own laborious studies were over, was to promote the improvement of me, his only child; and even during that part of the day when his presence was required in his study, he would devote a great portion of the morning to sitting by my side, while I was practising my piano; for I was sadly idle, and little deserving of such incessant attention and pains. He was passionately fond of music, and desirous that I should excel in that accomplishment, for which not only did he sacrifice his own time, but was unsparing in every expense which could tend to advance me in it. You will find among the models in Mr. Chantrey's possession a little figure of an angel in the act of adoration, which he designed for the top of my harp, and carved it in wood himself, that it might be, as it was, quite perfect. Nothing could exceed its beauty when just finished in the wood; but the sharpness of its execution was much impaired by the gilding. The harp was worn out and destroyed, but I have this precious remain in my possession, having had it displaced from the instrument of which it was so original and tasteful an ornament.

In drawing, too, my father omitted nothing that his own superior judgment could suggest; and, that I might not learn it superficially, he would make me sit by him in his study to draw from plaster, and thus be under his immediate eye. This circumstance ought, perhaps, to have enabled me to give a more accurate account of his manner of working than, I fear, can be of any use to you; but I did not then appreciate either my own advantages or the merits of such a father. In composing the subjects he had to execute for commissions, he appeared to have more facility in expressing his ideas

* Will Mr. Hardwick give the readers of the *Builder* "information" of this picture?

in clay than on paper; for there are not, in proportion to the works he executed, many drawings of his extant; his habit having been, most frequently, to model his sketches, and then repeat them on a larger and more finished scale two or three times, until he made the finished one from which the marble was to be worked. He always retouched the marble himself, putting the last touch to the flesh particularly, and leaving it with the roughness created by rather a large file, which he thought approached nearer to the grain of the skin in nature than when too smoothly wrought up. I have known him occasionally devote a long Sunday morning, when he could be quiet and undisturbed, to working on the marble; and always at the hour the workmen were absent he employed himself in putting the master-touches to the works in hand. He objected to the perfect whiteness of the marble in its natural state, and often employed a slight tint of coffee to stain it and give a softness to the lights and shades. This I remember more particularly his using to the Cupid that he took with him to Russia, and in an exquisite kneeling figure which was executed for a monument to Miss Rowley, and sent to Ireland.

Of his most intimate friends among artists, and those in whose society he chiefly took delight, was Hoppner, for whose rising talent when a young man he ever expressed the highest admiration, and for whose success when [1795] a candidate for the R.A. he was particularly anxious. He continued most warmly attached to him until his death.

Cosway he was in the habit of passing his evenings with frequently, and enjoying with him the inspection of his valuable portfolios of ancient drawings. His friendship with him had commenced almost immediately on his return from Italy, in consequence of the intimacy subsisting between our family and that of Miss Hadfield, who afterwards married Mr. Cosway. My father and mother became acquainted with her at a very early period of her life, at Florence, and being attracted by her talents and superior accomplishments, invited her to pass some time with them at Rome, from whence she, with her mother and sisters, accompanied us to England.

Fuseli was on terms of most intimate friendship with my father, and often passed hours with him of a morning in his study, to watch him while modelling. Although their style of composition was so widely different, they entertained a mutual admiration for each other's talents, and during his last illness, Mr. Fuseli would often come and sit with him to talk on subjects of art, and while away some of the tedious hours of suffering which my poor father had to endure; for he had placed himself in the hands of an ignorant empyric, whose violent measures certainly hastened his end, and caused him the greatest torture. He and Fuseli, when young and fellow students in Rome, used to be very fond of comparing figures from five points placed at random, and I have several of their sketches made in that way. It is probable that one of these first suggested to him the idea of The Fallen Titan, which he afterwards executed in marble, as his *deposit*, on being elected Academician, for I have some of these very early sketches, done while he was in Italy; and probably he had not till then had an opportunity of executing the subject, which had for so many years dwelt on his mind. I perfectly remember, on the occasion of that statue being worked, his saying in conversation, that he conceived the subject to exist in the block of marble, *à priori*, and that it was called forth by the sculptor's hand.

My father was also in habits of great intimacy with Horne Tooke for many years, and was an almost weekly visitor at his hospitable board, going on a Saturday evening, and passing Sunday at Wimbledon, when he used to meet many of his own opinions in politics, which at one period engaged his attention almost exclusively, and even endangered his liberty. I remember at the time of the arrest of Tooke, Hardy, &c., on a charge of high treason, an officer coming to my father with an order from the Secretary of State, for him to accompany him to his office. I chanced to be in an adjoining room, and the door not being closed, heard what passed. My father only requested to be allowed to go into his study to give some directions to his workmen, and was then ready to attend his summons. He said nothing to any one of his family of the object that called him from home, fearful of exciting my mother's apprehensions, and thinking that any intelligence on the subject would be best imparted by himself. I bore in silent anxiety the suspense of some hours, but to my inexpressible joy I heard his well-known knock at the door, towards dinner-time, and ran to greet his return, which was rendered doubly happy to us all from his having been instantly and honourably acquitted of any treasonable designs. In his visits to Wimbledon, he used to take long and solitary walks to some favourite spot of picturesque beauty. Ever alive to the attractions of nature, he preferred seeking her charms undisturbed by any companion, and would wander alone for many hours in the morning, enjoying in the evening the intellectual feast that awaited him, in the society of his host. Horne Tooke loved his frank simplicity of character, nor was his admiration unreturned. One of the first busts my father ever modelled was that of his illustrious friend. I think Sir Francis Burdett possesses it in marble. Another bust which he may be said to have studied *con amore*, was that of Warren Hastings, for whose character he entertained the highest veneration. I have often heard him express his admiration of the fine expression of his features, and more particularly of the uncommonly grand form of his forehead, which, with that of Horne Tooke's, he considered the finest he had seen in modern heads.

He was remarkably taciturn and spoke but little, yet that little was ever to the purpose. He was always encouraging to a young artist, and I have never known him reject the performance of any beginner, however poorly he might think of it; but have wondered at his patience in continuing to correct drawings that were brought for his inspection, when there appeared so little hope of improvement. He would often say, 'This and better will do, but this and worse will never do;' and he always recommended industry and persevering application, without which no great end could be attained. He was a most minute observer of nature, and I have often seen him stop in his walk to remark an attitude, or group of figures, that caught his notice; and he would trace its form in air with his finger, as if drawing on paper. He would in the same manner observe folds of drapery, and no doubt note them in his mind, to be referred to when occasion might require.

During the latter years of his life, he spent much time, and was at considerable expense in forming a collection of drawings and engravings by the old masters, and attended all the sales of such objects with great assiduity. His collection, which is a very valuable one, is in my possession, and constituted his principal occupation and delight after I married and removed to a home of my own, which deprived him of his accustomed and favourite evening's amusement in music. The late lamented president [Lawrence] was aware of the value of this collection, and was very desirous of obtaining tracings from some of the finest drawings, but as I could not meet with any artist to make the tracings he required in Paris, I sent him at various times parcels of drawings for his inspection, all of which were scrupulously returned, with the exception of a few by Albert Durer, which, at my request, he selected to keep. In return for this, he gave me last summer a most lovely portrait of my eldest daughter, drawn in his most exquisite style. He told her it would be the last he should ever attempt, for he found it too trying for his eyes to do anything so much smaller than life; and I have reason to believe that that of Miss F. Kemble was the only one he did after the one in my possession, finished in June, 1829. He also sent me, with a little engraving from his picture of Mr. Lock's son, a very small drawing of his, done when he was about eight years old, written under it, in a child's hand, 'Thomas Lawrence, Devizes,' and in his own hand at the time of sending it, 'Done when three weeks old, I believe.' I have transcribed many parts of his letters to me, which I thought might be valuable, as elucidating his own ardent and enthusiastic admiration of the works of the early masters. If I have done more than is necessary, you will excuse it, as also my inserting such passages as are so highly flattering to myself. I may surely be pardoned for being proud of compliments received from such a hand! But you will make use of such parts only as may be useful to your purpose.

* * * * *

To return to my father. Simple and frugal in his general style of living, from which he did not deviate even when fortune had begun to smile on his talents, he was, nevertheless, liberal to excess in everything that related to the arts, and his hand was ever open to alleviate distress, although his name might not court applause in *public* subscriptions. He sought the silent and lonely sufferer, and administered relief in private, sometimes without its being even suspected from whom the succour was obtained. Latterly, he became very strict in his religious tenets, which opened the way to numberless applications from those who attended the same places of worship which he did, though perhaps with less pure motives than himself. He spent considerable sums in either assisting them in difficulties, or promoting their plans for extending their sect. Yet notwithstanding his liberal expenditure, both in their service, and in collecting works of art, he left a handsome provision for his widow.

I do not know that I have anything to add to this little sketch that may prove interesting to you; but I hasten to despatch it to-day, with all its imperfections, in case there should be any point on which you may wish for more explicit information. I have not been able, on account of the distance from my residence, to send the drawing to the Rue de l'Ecole de Médecine, but hope to be able to do so to-morrow or next day, with the various extracts I promised from Sir T. Lawrence's letters, the list of models, &c. I beg you will not scruple to omit any part of what I have written that may appear to you irrelevant to the subject. I need not, perhaps, have said so much about myself, but as being the principal object of his affection and interest throughout his life, I thought you might wish to include me in the account of his domestic habits; and grateful affection for so excellent a parent has probably led me beyond what was requisite; but you will use only what suits you best.

Mr. Chantrey has probably had a visit from Lord and Lady Nugent, to look at my father's models, for they are kind enough to say that they may be able to give some of them stowage. I will mark the list of them, specifying which I am most anxious to preserve.—I am, &c.,

LAVINIA FORSTER."

Anastatius Hope has a right to be heard touching a work of art;—the well-known "Mourning Achilles," by Banks, in the hall of "The British Institution."

To the Rev. Edward Forster, South Audley-street, London.

"Esher, 22nd April, 1805.

Sir,—No doubt you will have been surprised at my not acknowledging the honour of your letter of the 17th sooner. The fact is that I happened to be on a little excursion in the country, and only returned to Esher, whence I now write, yesterday morning.

I feel myself utterly at a loss to express how very highly I find myself flattered with the offer of Mrs. Banks and Mrs. Forster. I have always considered Mr. Banks as one of those few artists who were an honour to this, and would have been to any, age or country; and your thinking my little collection of sufficient merit to be adorned by one of his finest works is paying it a compliment indeed, which it has seldom received even in words. It, however, only occasions a renewal of that regret which I experienced once before in Mr. Canova's offering me a cast of his Perseus; and though I am well aware of the *immense* difference there is between the copy of an original existing elsewhere and an original model, I still have to lament that my space is so confined as to oblige me to limit myself entirely to marbles. Of these I already possess more than I can conveniently place; and I expect a colossal statue from Rome which I am totally at a loss to find room for. I cannot help indulging a hope that my not being able to avail myself of the highly gratifying offer I receive may be the means of Mr. Banks's statue finding a place more worthy of its merit than my roof could have afforded.

I request you will present to Mrs. Banks and Mrs. Forster my best respects and most grateful thanks, and have the honour to be, sir, your most obedient and obliged servant,

THOS. HOPE."

Chantrey went to the thinning and destruction of Banks's *models* with a remorseless hand. He had no kind of feeling for poetic flights in marble. My father stepped in and secured the two small casts of "Achilles" and "Venus," to which he has done justice in his Life of Banks. They are now in my possession, and merit all that he has said of them.

A large and very noble alto-relief by Banks, not mentioned by my father, may be seen in one of the ugliest churches in the environs of London,—Mrs. Petrie dying in the Arms of Religion, and supported by Faith and Hope. It is in Lewisham church, in Kent. Banks's monument will repay a visit,—fine—Flaxman not finer. The beautiful Thetis bas-relief, mentioned by my father, is now in the National Gallery, and richly deserves the space it occupies.

PETER CUNNINGHAM.

MEDIÆVAL MONUMENTS TO MODERN HEROES.

WHEN Edward I. determined to erect a lasting memorial to his devoted queen at every halting-place of the funereal cavalcade on its long route to the Abbey of Westminster, neither he nor the artists employed by him sought to imitate the style of the fine monuments of the pure Norman period, nor those of any other by-gone epoch. The art of the day, in its own spirit, in its own peculiar phase of development, in its own most marked characteristics, was alone called upon to furnish suitable designs and devices. It was the artistic spirit of that special age, in which living tears were shed for the early death of Eleanor, that was called upon to embody its own original skill in a series of worthy memorials which should remind a far distant posterity of a loss which the nation had sustained in that unpropitious year, 1291, which had deprived it of a generally beloved queen. It was the very essence of the intellect of that age, as displayed in its peculiar forms of art, that was required to show itself to posterity in the act of marking an irreparable loss by the erection of a series of suitable and lasting monuments. If the forms of art peculiar to preceding epochs had been adopted in those monuments, either through the absence of sufficient contemporary skill, or the accidental existence of a morbid taste for antiquated styles of art, the celebrated Eleanor Crosses would not possess, in an artistic point of view, a tithe of the interest which they now inspire; carrying us back unerringly, as they do, to the epoch at which they were erected. The attempts to revive the massive spirit of ancient Egyptian architecture during the Greek dynasty of the Ptolemies, though perhaps satisfactory enough in that age, as meeting the desires inspired by a passing fashion, prove themselves but very poor and shallow copies, when compared, by critics of the present day, with the Titanic models of which they are such weak and poorly accentuated imitations. In Rome, also, in the age of Hadrian, when it was sought to introduce the worship of several Egyptian divinities, the statues of Egyptian style with which the new temples were embellished became in the hands of Roman artists very tame representations of the ancient models. It is true that they were sculptured with great manipulative skill, and wrought up to the highest possible degree of finish in the rarest and most costly marbles; and yet, as we know them by the examples that may be examined at the present day in the museums of the Vatican, they appear wretchedly devoid of the true character of Egyptian art, and entirely without that fine aroma of originality and high antiquity that still clings about the vast antique monuments which they were vainly meant to rival if not surpass.

The fact is, that a *true* style of art is an integral, and a very main part of the general, social, and historic expression of every well-defined epoch. It is one of a set of features that requires the sympathetic accordance of all the others to heighten and complete its real value. The institutions, the character, the costume of an epoch, all agree with a true form of art which has been evolved under their influence, and which has placed its own impress upon them in return.

We are, during the prevailing rage for imitations of Mediæval art, doing precisely what the half-Egyptianized Greeks were doing under the dynasty of the Lagidæ, and what the sculptors of Hadrian were driven to do in order to impart splendour to the pseudo-Egyptian worship introduced by the emperor. We are creating works which our posterity will, in a similar manner, compare with their ancient models, and condemn as unreal and as not stamped with the true artsignet of the age in which they were produced. That much talent has been shown in the modern attempts to adopt every form and detail of Mediæval architecture to present use, every one will readily concede; and also that many of our artists appear to be working through a conscientious study of old styles of art towards a new and national style; but, in the meantime, the prevailing Mediæval mania, in the shape of slavish reproductions, not only of main forms, but of every intricacy of detail of past styles, when applied to the monuments and memorials to heroes and worthies of our own day, is creating artistic inconsistencies, to say the least, which are of the most objectionable character. Placing the portrait-statue of a man of our day beneath a Gothic canopy in the style of the fourteenth century, presents one of the most unreconcilable forms of incongruity to the eye of a thoughtful critic. It is as though the marble effigy of a Paladin of the reign of Edward III., with crested helm, and plate armour, and embroidered surcoat, and jewelled baldric, were to be removed from beneath the rich tabernacle work of the ancient Gothic canopy of his tomb, and the modern statue of a man of our own day put in its place. In fact, to surround the monumental portrait of a modern personage with the architectural decorations of the fourteenth century is as ridiculous as it would be to clothe the modern statue itself in the trunk hose and the gigantic ruff, and all the other toilet luxuries of the reign of Elizabeth, merely on the ground that they would form, like the Gothic canopy, more picturesque accessories. Incongruities of this kind tend towards the utter destruction of the historic chronology of art.

The monument to Walter Scott, at Edinburgh, is one of the first and most conspicuous of modern monuments of the class alluded to. It might at the first glance be mistaken for one of the memorials to Eleanor, so nearly are some of the principal characteristics of that interesting series of monuments imitated in the modern work. The modern marble figure beneath the Mediæval canopy does not seem to belong to it. In face, in costume, in artistic treatment, it is thoroughly of our own day, while all the decorative surroundings are of a style four centuries old; and though evidently quite new, their newness does not bring them into any better accordance with the features and general contour of the great novelist of the nineteenth century, as exhibited in the statue under description. It could scarcely be argued that, because Walter Scott sometimes wrote of Gothic times, he should have a monument of sham Gothic to agree with the sham Gothic of his historical novels, because the idea would not involve a compliment to the great author; and there is no other possible defence of the artistic incongruity that has been perpetrated.

But of all our recently erected Mediæval monuments to modern worthies, not one combines so great a sum total of incongruity, both in general conception and in all its various details, as the monument to the officers educated as boys at Westminster School, who fell in the Crimean war, and during the Indian rebellion; though, taken as a mere modern exercise in the reproduction of Gothic design, it is one of the best things that our modern Mediævalists have produced. But its utter discordance with the times, and with the events and persons which it is intended to commemorate, is such, that neither foreigner nor native, not let into the secret, would ever be able, from the general aspect of this monument, or from any of its very numerous features, to guess its purpose; and when, after digging out its meaning from the inconspicuous and, to modern eyes, almost illegible black-letter inscription, the expression of its purport in any of its features would still be exceedingly difficult, and it may be said impossible, to trace.

But only let the inscription be permanently removed from that curiously ornamental columnar design, and the riddle might defy the cleverest guesses of the most learned critics of this or any future age to unravel. To quote a passage from a contemporary journal, a careful and conscientious critic might, after due examination of every part of the structure, perhaps "come to the conclusion that the work was a careful restoration of an ancient monument erected by the Black Prince or his father, to commemorate the institution of the order of the Garter;" . . . . . or "seeing the circlet of shields about half way up the column, which looks very like the shields of the barons in the parchment margin of the original Magna Charta, he might imagine that the object before him was a trophy erected at that epoch, which had, in churchwarden fashion, been newly polished and beautified. But giving up that notion as untenable, he might at last notice the St. George and dragon at the top; when he might, in despair of a better interpretation, jump to the conclusion that a curious discovery relative to the supposed tomb of the saint had been recently made in that place by some enthusiastic archæologist, and that it had been determined to raise a splendid memorial to the national saint in order to mark the exact spot of the interesting discovery."

It may be urged that after the removal of the inscription from any monument whatsoever, it would be difficult to say what it was intended to commemorate. But it is not so. Taking another columnar monument as a strictly analogous test, and supposing that no inscription existed,—the column of Trajan may be cited as a comparative example which would prove the contrary. A spectator has only to glance at the progressive drama elaborately carved in marble which spirally unfolds itself as it rises from the base to the summit of the column, to perceive at once that a magnificent memorial of the triumph of Trajan was the object of the work. The attacks of intrenched camps, the struggles of compact Roman legions against hordes of barbarians in Dacian and other costumes, the hasty construction of temporary bridges over rapid rivers, and many other incidents of war, one conspicuous figure being always present, in which we at once recognise the well-known features of Trajan, render all inscription superfluous. The inscription is nevertheless there, and still nearly as perfect as when freshly left by the chisel of the Roman sculptor; and indeed it is desirable that an inscription should always form part of a public memorial, while at the same time a monument should not be so designed as to become an unsolvable riddle without it.

The memorial proposed to be erected at Manchester to the late Prince Consort is open to objections similar to those urged against that to Sir Walter Scott. There is a member of the Royal Family of England, of the nineteenth century, in the robes and general dress of his own day, placed beneath a canopy of Italian Gothic, that might have been copied from one surmounting the effigy of a Colonna or Frangipani of the fourteenth century. The new Drinking-fountain in the Market-place at Maidstone is composed of a somewhat similar canopy of English Gothic, beneath which is a modernly-conceived statue of our present Queen; forming another example of the mixing together in an incongruous manner of the artistic feeling of the thirteenth century with that of the nineteenth.

That an architectural canopy, as a protection and ornamental accessory to a statue, is in itself a pleasing and appropriate device, none will deny. But why not design a canopy which shall be consistent with the general feeling of modern art, instead of one almost diametrically opposed to it.

The monument erected to Sir Humphry Davy on Leskundjack Hill, near Penzance, is another example of the incongruous muddling up of times past and present. Here is the effigy of one of the chiefs of a science exclusively modern—of one of the great discoverers in the entirely new region of chemistry—placed on the top of a column which, from its pretended style, might be assumed to belong to a period anterior to that of the alchymist. It surely was not impossible to identify a somewhat similar erection (as to proportions) with the advanced spirit of modern discovery in the higher branches of positive science, instead of making it seem to belong to an age in which even the rudiments of those modern branches of science were unknown, and, indeed, unguessed at.

It is not that the architectural portion of the monuments we have alluded to, when considered from a special point of view, is not excellently well conceived and designed: quite the contrary. The Westminster memorial is exceedingly clever. The Leskundjack tower has a simple grandeur about it that is very remarkable; and Mr. Worthington's design for the Manchester memorial to Prince Albert is one of the cleverest reproductions of the Italian Baldochino style of the thirteenth century that has yet been made; but the works alluded to are all inconsistent with the purpose in view. Our age must learn to stamp the national memorials of its great events and great achievements with its own seal, and not with one that may be taken for the forgery of some signet of the past.

Let us keep our noble Gothic monuments, our noble cathedrals, and ancient family halls from decay as long as possible; and in the matter of churches, the Gothic style appears so suitable, and the chain of associations connected with churches in that style not having been broken through, there can be no great incongruity in building new churches in the general features of that style, leaving to the individual genius of our architects the unfettered power to gradually break through the trammels of precedent, just as the Gothic architects themselves did, thereby securing to their style five centuries of continuous expansion into different phases of character, always elegant and original.

In public monuments to men of the day, however, the matter is very different, and so it is also in the matter of our civic buildings. They should accord with the spirit of the age, and not, by any features too directly borrowed from the past, meet posterity with an artistic expression that is not our own. The left-off suits of our forefathers may possibly be in some respects more splendid than our own; but, as that is no reason why, in our family portraits, we should appear tagged and tasselled, frilled and mantled, and laced and embroidered, as our ancestors were; so, in the

case of our public statues, there can be no good reason for the adoption of Mediæval canopies, enriched with servile imitations of Gothic vaulting and groining, and with the corbels, and crockets, and bosses, and traceries of the thirteenth or fourteenth centuries. It is a kind of artistic masquerading that is below the dignity of the age. Moreover, practices of this kind tend to destroy the historic chronology of art. We have the arts of 1450 muddled up with those of 1830; 1350 mixed up with 1850, and 1250 mixed up with 1860; for there has been a tendency, as soon as one Gothic period was copied out, to go farther back to ransack another, and another, till no truly consecutive history of art (worth the telling) could result from a critical examination of our national monuments; insomuch that, if another D'Agincourt should attempt in England to write "L'Histoire de l'Art par ses Monuments," the result would be a mass of confusion; unless, putting utterly aside all the servile imitations of former periods of art, he should take as his example only such works (and we are not altogether without them) as exhibit a genuine tendency towards originality of conception and design. There would be still another method of treating the artistic history of England,—by dividing our last ten centuries of artistic development into two kinds of periods, distinguished as active and originative, and dormant and imitative; in which system our own epoch would certainly fall into the last-named category, exhibiting a few striking exceptions, as all periods of debasement generally do. But, while this conclusion may appear somewhat discouraging, we may console ourselves with the conviction that an artistic age is already dawning, which is evidently destined to be one of activity, and one of renewed creative power.

THE LATE M. CARISTIE, ARCHITECT.

THE profession in France has very recently lost one of its oldest representatives in M. Caristie, a member of the French Institute, and honorary and corresponding member of the Institute of British Architects, a man of great erudition, and an architect skilful in design for the restoration, and in the actual conservation, of ancient monuments. Auguste Nicolas Caristie was born at Avallon, in the department of the Yonne, on the 6th December, 1783; and when he died, was just completing his seventy-ninth year. He studied under Vaudoyer and Percier; and he gained in 1813, the grand prize of Rome. He received medals on the occasions of the Exhibitions, severally, of 1822, 1831, and 1855. In 1840 he was elected of the Académie des Beaux Arts, in the place of Huyot. He filled the important public offices of an inspector-general and vice-president of the council "des bâtimens civils," and was specially charged with the third and fourth *circonscriptions* of the public buildings of Paris, including the Institute, the Palais d'Orsay, and the crypt of the Invalides; and he was a member of the permanent commission "des monuments historiques." He was also a member of the municipal council of Paris, and an officer of the Legion of Honour.

Amongst the foreign societies of which he had been elected a member, was the Royal Academy of Belgium.

Of his ideal restorations of ancient buildings, one of the best was the restoration of the so-called Temple of Serapis at Puzzuoli, recently taken as an authority by M. Hittorff for some of the features of plan of his restoration from a Pompeian wall-decoration, of a building, "hospitium," for the treatment of the sick. M. Hittorff's paper was noticed and illustrated in our last volume. M. Caristie's principal, actually built, work was the Expiatory Monument, or "Monument de Quiberon," near Auray and Vannes, on the coast of Brittany, which was erected by the Bourbons to the memory of 950 *émigrés* and Royalists, who formed the expedition to Quiberon in 1795, and fell there, or were shot at a place not far distant. If we do not mistake, there are three monuments of these events,—all in the same locality,—namely, one in the form of a Grecian temple, one within a church, and that attached to the nunnery of the Sœurs de la Sagesse, which last we believe to be the work referred to as by Caristie. The subject of our notice, however, was best known to English architects by his ably-executed structural work of restoration or conservation of the Arch of Orange, a Roman monument of much importance to architectural students. M. Révoil, the present diocesan architect of the Bouches-du-Rhône, was one of M. Caristie's pupils.

STAINED GLASS WINDOW FOR GARRISON CHURCH, WOOLWICH.

THE engraving represents one of a series of five windows that are proposed to be erected to the memory of officers who fell in the Crimea, in the apse of the new Garrison Church now erecting from the designs of Messrs. T. H. & Digby Wyatt, at Woolwich. The subjects contemplated are to illustrate the petitions of the Litany—"By Thy Holy Nativity. By Thine agony and bloody sweat. By Thy precious death and burial. By Thy glorious Ascension. Good Lord, deliver us."

One of Series of Windows for Apse of Garrison Chapel, Woolwich.

These will be typified by events recorded in the Old Testament, one of which, viz., "The Feast made by Abraham at the weaning of Isaac," is shown in the window of which this is the engraving. Messrs. Lavers & Barraud, of Endell-street, London, are the artists employed.

The church is described as Byzantine in style, decorated externally with coloured bricks, Bath stone columns, caps, and corbels, and a couple of granite pillars supporting the front porch. The contractors are Messrs. Smith & Co., of Pimlico.

LABOURERS' COTTAGES.

IN my concluding remarks on Mr. Taylor's paper at the Society of Arts I am reported to have said, Mr. Rawlinson "hoped the Society of Arts would give all the aid in its power; not that cottages should be built which the poor man was able to pay for, but such as would enable him to live as became a Christian, and properly to perform his duty to society."

Some persons may infer from the general tenor of my remarks, as reported (and, as I believe, accurately reported), that it is my desire to urge, as a national work, the building of cottages out of national funds, for the whole of the badly-housed poor, regardless of any adequate pecuniary return in the form of rent; that is, that I entertain wild Socialist notions of maintaining the poor at the pecuniary cost of the rest of society. I can only say, I have no such ideas. All experience teaches that indiscriminating and wholesale charity may be one of the greatest possible curses, both to the recipients and to the givers: the best form "charity" or assistance by the aid of money to the poor can take is to do something which shall be of permanent benefit to the poor man, and which something he could not possibly do for himself; but, being done, shall enable him better in future to help himself. The poor man cannot provide himself with a properly constructed dwelling in which to reside with his family. The fearful results of residence in defective dwellings you have shown in the *Builder* over and over again. You have never, in any instance, overdrawn the picture of human misery; nor, in any of your inferences, gone beyond the actual horrible contingencies. I can also assert, that of my own knowledge, your pictures of "Town Swamps" are true;—true of this vast metropolis; true of the whole of Great Britain; true of the whole of Europe; and, no doubt, of the whole world. Civilization rests on a substratum of human misery, the offspring of neglect and defective house accommodation; leading to disease, to poverty, to pauperism, to vice, and to crime. If the poor cannot lift themselves out of this slough of despond,—and history is full of evidences that they cannot, and our own reason tells us the same,—then it must surely be the duty of a wise Christian Government to devise means to enable the poor to live as Christians; that is, as members of civilized society. To remain apathetic is to leave as the base on which civilization rests the smouldering but active lava-fires of vice ready to heave at any exciting convulsion and overwhelm the whole.

I will not preach levelling doctrines, nor advocate universal suffrage, but universal Christianity. I find that defective house accommodation leads to defective health and to defective morals. Defective health produces misery, poverty, and premature death in the weakly: defective morals lead to vice and crime: poverty ends in pauperism: vice leads to the lunatic asylum; and crime leads to the gaol. A nation suffers loss both directly and indirectly in consequence of all the misery, ignorance, pauperism, vice, and crime, engendered out of defective house accommodation. It must, therefore, be a national duty to assist in removing, as far as may be practicable, the prime cause of some of the most terrible evils society now endures.

In my opinion, rent could be paid if sickness is lessened, bodily strength to labour is increased, and the Christian virtues to strive and to endure have the chance of growth. Society is not safe with a substratum of disease, pauperism, and vice. Society will not be safe with a substratum of receivers of bounty for which no equivalent is given. Society can only rest safely on an *independent*, healthy, and virtuous Christian community.

ROBERT RAWLINSON, C.E.

PLANS FOR THE IMPROVEMENT OF THE CONDITION OF THE YOUTHFUL WORKERS AT THE POTTERIES IN STAFFORDSHIRE.

THERE are few social questions more difficult than the right and useful employment of the youth of both sexes, so that injustice may not be done by working the undeveloped powers before the sinews, bones, and muscles have been sufficiently formed; that education may be attended to; that a due amount of care should be taken in manufactures and large works to prevent accidents, and to make arrangements which will be likely to prevent evil in cases where young men and girls are thrown much together in various descriptions of labour. Within the last half cen-

tury there has been much good done in this way. The employment of females in coal-mines has been prohibited: the condition of children, boys and girls of tender years, in the cotton manufactories and elsewhere has been mended; and those employed in the bleaching-grounds have been cared for.

It has for long past been thought that the same attention which has been shown to the classes above mentioned is very much required by the large number of young persons who are engaged in the pottery works of Lancashire, Northumberland, and elsewhere; and it has been regretted that both the physical and educational condition of not only the children but also others engaged in the Staffordshire Potteries, is of a very unsatisfactory description. For the purpose of considering this question, meetings have been held at Burton-on-Trent and at Hanley. At the first-named place the Earl of Harrowby took the chair, and addresses were delivered by various gentlemen of influence, most of whom were interested in this branch of manufacture. The evil of the present state of affairs was generally acknowledged; and although a strong desire was shown for improvement, there seemed some difficulty and difference as to how the necessary amount of good was to be effected.

After some observations by the chairman and Mr. Adderley, the member for the north division of Staffordshire, the Rev. H. Sandford, her Majesty's Inspector of Schools, said the difference had often struck him between the number of children attending schools in the towns and rural places in this country. In eleven schools in the rural districts there were 135 children over twelve years of age, while in twenty-two of the Pottery towns there were only 127. This showed how the children were drafted from schools, or from no schools at all, and sent to work at manufactories at a very early age. He was of opinion that good was only to be done by the half-time system. Mr. J. Edge could not see how the half-time system could be applied to the Potteries. He thought they should bring their influence to bear to prevent children going to work before they were of a certain age, and before they could read and write. At present children went to work at seven or eight years of age, and before they had any useful education. He thought they should not be employed until they were ten years of age at least.

Dr. Aldridge said that there was a great prevalence of scrofula, a variety of skin diseases, and also of consumption, in the Potteries, caused by the nature of the work of the potters. He also alluded to the low average of age to which those workers arrived. Potters came to him who in appearance were at least fifty or sixty years of age; but, on inquiry, they were found not to be more than thirty or forty. Mr. Maddocks was convinced that legislation was necessary, but did not see how the half-time system could be applied to the Potteries. He referred to the improvidence of parents, and that it would be better to prevent the children from going to work before they were twelve years of age. Mr. Adderley thought that this plan would be better than resorting to the half-time system, and suggested that it was a matter which rather concerned the parents than manufacturers. He admitted, however, that when trade was good there was a difficulty in attaining a sufficient number of boys, but that the half-time plan would add to this inconvenience. The Earl of Harrowby said that a limit to age would create the same difficulty as regards the number of boys available. Mr. W. Moore said that one objection to the half-time system was that the children were associated with the men in labour, who would have great objection to have fresh boys in the middle of the day. Mr. Wedgwood had been long of opinion that the work to which boys were put in manufactories was not fit for them. Everybody would admit that for boys to work fourteen or fifteen hours a day, running in and out of intensely heated rooms, was not right. There were two ways of remedying the evil: one was to have relays of boys; the other to limit the age at which they should be employed. If they limited the hours, it would be best to limit them to half a day: if, on the other hand, they only limited the age, they created the same difficulty as in the first case: they would still limit the supply of boys.

Mr. Aynsley said that, on an average, the potters did not work more than ten or ten and a half hours in the day. They were improvident men, who neglected their work for two or three days in the week, and worked night and day for the purpose of making up for lost time; and the boys were obliged to work with them. After other remarks, Mr. E. J. Ridgway said that there were many light branches in the trade which little girls were well able to do; and if they were put upon half-time, it would be a good thing for them to be so employed. If they restricted the employment of children to those above twelve years of age, a great many of them would be running about the streets, and doing nothing else until they were old enough to be employed.

After a conversation it was determined, in order to arrive at the opinions of all parties, that public meetings should be held in all the towns. [We fear that the working potters will not be able to take much part in those meetings; but some means should be used to learn what the majority of them say on a subject which very much concerns them and their children.]

In Hanley, at a meeting of manufacturers and overlookers, a general opinion in favour of the half-time system seems to have been expressed.

FIRE!—WATER! WATER!

SUCH were the cries which were heard in the Soho district about midnight on the 26th of December, when a fire, fatal in its consequences to six persons, broke out in Portland-street, in one of those houses which are now for the chief part let in tenements to several families. The flames appear to have spread with great rapidity; this being accelerated by some injudicious person forcing open the shutters of the shop below, and thus fanning the fire by the increased draught.

Clark, the conductor of the fire-escape, stated to Mr. Low that he was called, at about half-past eleven o'clock, by several persons, and immediately started with his escape, and reached the scene of the fire in about a minute and a half. On arriving, Clark found the fire issuing from the broken shutters of the shop. As soon as the fire-escape was fixed to the second-floor window, two or three men from amongst the crowd rushed in, and amongst them succeeded in rescuing two children; and Clark, at much risk and some damage to himself, managed to bring away a third child. It being "boxing night," the mob which suddenly assembled was very rough and troublesome. But the engines seem to have arrived with praiseworthy rapidity. The St. Ann's parish engine, the powerful land steam-engine by Shand & Mason, and numerous others of manual power, were soon on the spot; but though all, including the steam-engine, were ready for action, *ten minutes—some say more—elapsed before a drop of water was to be had.* Some thousands of people had assembled. The police, fire-escape conductors, the firemen and their engines, were all at their posts—*but where was the turncock?* This is a question which calls for a clear answer. We want to know whether, in the hurry and confusion of the scene, no one had thought of rousing this functionary? Perhaps it was not well known where the turncock lived; or his house may have been at a distance; or it is just possible that he might have been keeping the holidays; a turncock is as liable to be frail in this way as any other man. After the rescue of the three children, it became known that, besides the children in the room below, there were six others in the upper part of the house, through which the flames were sweeping; and, notwithstanding, no water from the New River Company was to be had. It is clear that in connexion with metropolitan fires we want some better arrangements in this respect, for there should always be a supply of water waiting for the fire-engines, instead of the engines being obliged to wait for this element, which should be always ready in thousands of gallons to be thrown during day or night, into any part of the metropolis. From time to time, when the evils arising from the present system of working the water mains have been shown, and loss of life and property has resulted from delay, we have directed attention to the circumstances, and pressed the necessity of change in connexion with the fire brigades. Steam-engines, both on land and water, are coming into general use; and a system of electric telegraph will, ere long, have been made complete between the various stations of the brigade; but the turncock's office seems to be carried on in the same old-fashioned and imperfect manner as it was in the days before the locomotive and the electric telegraph came into use. We are aware that in the management of the mains there is a difficulty as regards the supply of water in cases of fire. But why is the law requiring them to be charged at *high pressure* set at nought?

On the present sad occasion, Emily Spencer, aged 16; Samuel Spencer, aged 11; Sarah Ann Spencer, aged 12; Joel Walter, aged 8; Edward Spencer, aged 7, and Alfred Spencer, aged 3 years, all children of the same parents, were suddenly put to death.

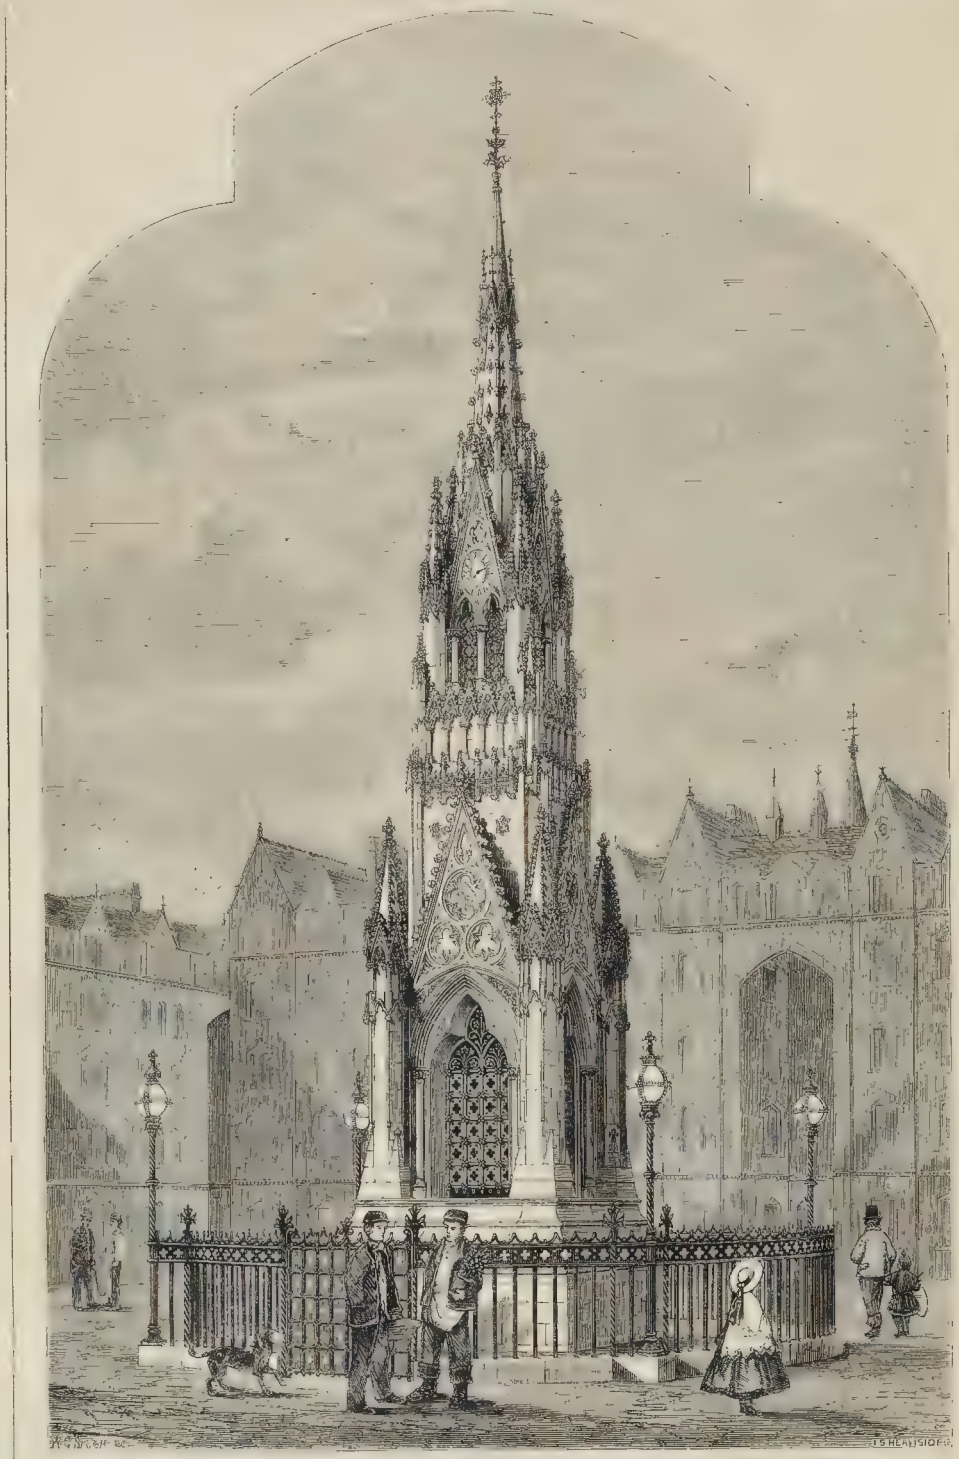
After mentioning this loss of life, and describing the damage which has been done to the several premises, Captain Shaw, the chief of the fire brigade, says, "So much damage was done by a stranger pulling the shutters down." It is reported that this person has been taken into custody.

THE LATE MR. FOXHALL, ARCHITECT.

MR. FOXHALL was so much respected by many members of the profession for his integrity and charity, that, though it was not his fortune to adorn the country with many fine buildings, we cannot allow his death, which unfortunately occurred about a fortnight since, to pass without some record. Mr. Foxhall was born in London on the 26th of May, 1793. He was articled to Sir John Soane; his father, who had made a large fortune in trade, and Sir John being old friends. In consequence, Soane, when making his will, inserted young Foxhall's name as residuary legatee. Through circumstances he came into possession, not long before his death, of a much larger sum than Sir John had contemplated. His practice was principally confined to the appointments he held. He was district surveyor of St. George's, Hanover-square; and surveyor to the London estates of Sir John Sutton, bart., and of his Grace the Duke of Norfolk. He built the Roman Catholic chapel at Southampton, and one with large schools at Westminster; several houses in London and its neighbourhood,—among them the group of buildings forming the corner of Bond-street and Conduit-street. Mr. Foxhall was one of the earliest members of the Institute of British Architects.

GREENHOUSE ROOFS.

THE circulation given to the prescription we published for making defective glass roofs watertight, viz., a mixture of resin and tallow, has led a number of persons to write to us, recommending the use of different plans of glazing which might prevent the necessity for any such expedient. Two wiseacres, indeed, go so far as to ridicule the *Builder* for mentioning a remedy for such a defect, when they, the aforesaid wiseacres, each know a plan by means of which a glass roof can be made to remain watertight;—much as if they should laugh at a surgeon who taught how to set a broken leg, on the ground that he should only tell his listeners by what means to keep a whole limb. A more rational correspondent speaks well of an advertised plan (Nixon's). He says,—"According to this invention the sash bars are made 7 feet long of wood inclosed in zinc, having an open tube on each side, the glass being slid down the tubes from the top or bottom according to circumstances. The bar is constructed on a principle that *allows for expansion and contraction*, without which no skylight will remain waterproof: it is also self-ventilating." Another points attention to Showell's waterproof glass roofs, of which we spoke a few weeks ago. In this, plates of glass with turned up edges rest on iron purlins, the edges of the glass where they meet being protected by a metal cover.



"The cost, including Hartley's three-sixteenths fluted glass, with the addition of the patent form and covers, &c., will be about 1s. 2d. or 1s. 3d. per foot." All we desire to say is, that persons about to erect a conservatory, or other glass house, should themselves inquire into the merits of these plans.

CLOCK TOWER, COLUMBIA-SQUARE, BETHNAL-GREEN.

THIS clock-tower has been built by Miss Burdett Coutts, for the convenience of the tenants of Columbia-square. It is situate in the centre of the quadrangle, and contains a striking clock with four dials, to which access is obtained by ornamental iron gates on its north and south sides. Upon the alternate sides are panels containing inscriptions which relate to the accommodation, &c., of the surrounding buildings.

The tower is 12 feet square at the base, and 35 feet high to the top of the vane; and it is composed entirely of Aubigny stone of good quality. The various details and carvings have been executed with care. The contractor was Mr. R. C. Baker, of Park-street, Camberwell.

The works have been completed from the designs of Mr. H. A. Darbishire, at a cost of about 900*l.*

CLOCK TOWER, COLUMBIA SQUARE, BETHNAL GREEN.—Mr. H. A. Darbishire, Architect.

THE NATIONAL PROVIDENT INSTITUTION, GRACECHURCH STREET, LONDON.—PROFESSOR KERR, ARCHITECT.

THE NATIONAL PROVIDENT INSTITUTION, GRACECHURCH STREET.

WE present in this number an engraving of the new offices of this Institution, at the corner of Gracechurch-street and Eastcheap, just completed under the charge of Professor Kerr, and of which occupation was entered upon within the last three weeks.

To speak of the history of the institution itself is not required of us; but it cannot fail to be interesting to every person who sympathises with the philanthropy of our age and country to note that the "Friendly Society" which has now erected for its business a building of this magnitude and pretension, was established little more than five-and-twenty years ago, in a second-floor room in Nicholas-lane, with very humble accompaniments indeed. The institution, in a word, is a life assurance office on the principle of absolute mutuality. We believe it never required one shilling of subscribed capital from the first; and its income at the present moment is said to reach 350,000*l.* a year; the value of securities in its strong-room being proportionately large.

The edifice now completed has been in progress for the somewhat lengthened period, now-a-days, of two years. The late strike of masons fell with its full weight upon the undertaking; but all's well that ends well. The general contract has been carried out by Mr. Myers; Mr. Grissell, Mr. Shaw, and Mr. Barrett have severally been connected with the ironwork; Mr. Stewart has been decorator; and the name of Mr. Ruddock deserves mention in connexion with carving-work, and, indeed, sculptural art of great skill. The whole of the works seem to merit approbation for substantiality. Upon the good principle of giving credit to the hand as well as the head, we are authorized to say that much of the success of the work is due to the care and good craftsmanship of the foreman, Mr. Shillito.

There are five stories in the building, namely, the basement, for muniments, &c.; the ground-floor, public office; other offices on the first-floor; a second-floor to be let off; and above this the messengers' rooms. The basement contains a large deed-room, solicitors' examination-room, and accommodation for books, papers, and stationery, all arranged in order, as also the lavatory, &c., for the clerks. Light and air have been provided for throughout; and in particular the deed-room has been contrived for dryness, not by iron or lead lining and gas-burners (an excellent expedient for the express *creation* of damp), but by the simple measure of providing the ordinary means of warming and ventilation,—a door and window to be opened at pleasure, a fire to be lighted when required, and a few common air-flues. The slate fittings for papers are remarkably complete throughout the basement generally. The access is from the public office by a continuation of the principal stair. As for the ground-floor, it is merely one large open expanse, more than 50 feet square, the whole of the division walls above being supported on about half a dozen iron columns. Here Messrs. Smee have fitted up a complete and elegant series of mahogany counters and desks, on either side of the central line which passes from the entrance-door in front to the staircase immediately opposite, at the back. On the first-floor this staircase lands in a spacious central vestibule. The board-room occupies the front over the entrance, the medical officers' rooms adjoin at the corner, and the secretary's and chairman's rooms look on Eastcheap, all entered, of course, from the vestibule. Here there are also several waiting-rooms. The second-floor has a separate entrance at the extremity of the Gracechurch-street façade, with a separate entrance at the back. It has been already said this story will be let as chambers. The uppermost story has also its special entrance at the extremity of the Eastcheap façade, and its separate stair; the rooms being appropiated chiefly for the residence of the messenger. The three staircases are grouped in contact at the back part of the site, and the architect has arranged them for intercommunication (both present and prospective) and no less for perfect separation, with much care. It thus appears that simplicity of plan has been the great object internally; and accordingly it is found by visitors that the inspection of the arrangements is a thing of a very few minutes.

The exterior design will explain itself, but it is sufficiently peculiar to warrant us in requesting the architect to explain his views, which he does thus:—Being firmly attached to the classical party, he holds that classic architecture alone is calculated to give lasting satisfaction in a London commercial building. At the same time he sees no reason why the spirit of the picturesque should not be openly acknowledged. Once more he suggests that modern English taste will be found to favour permanently in decorative art only such forms as shall be delicate and graceful in detail rather than bold and heavy,—playful rather than severe; certainly simple rather than complex. The so-called Italian model of general design is adopted, with its simple horizontal lines; simplesymmetries, simple arithmetical proportions. Uninterrupted arcuation throughout, recessed porch and balconies, a special treatment of the splayed angle, a high-pitched roof, undisguised chimneys and dormers, and some lesser features of similar tendency, supply the picturesque element. Mouldings of a Greek type, carvings in every case simple, and comparatively flat, decoration concentrated, and features generally small, give a delicate character to the whole, which is equivalent in effect to elaborate ornament, without suggesting that ostentation which the English mind always desires to avoid.

What may be called the focus of the effect is the entrance porch. The key-stone of its wide outer arch is the shield of the institution: this carries a carved stone clock-case, surmounted by a vase, and supported by a pair of well-sculptured figures in full relief, being the heraldic supporters of the institution,—Justice as a woman (whether this is not Charity, however, or some other female virtue, is doubtful), and Strength as a lion. Heralds say the head of the lion should be next the shield, but we will let the architect have his own way. The sides of the archway are formed with three pairs of red granite shafts with foliated capitals, and the successive soffits, together with the semicircular panel above the door, are delicately carved in flat water-leaves and shells, the depth of the recess being in all 5 or 6 feet. The windows have massive mahogany casements throughout; the entrance doors are of the same, with very nicely-carved spandrils; and around a massively-moulded mahogany door-frame there is a lining of white marble, which forms a delicate finish. A very little gilding is introduced in the porch.

The stone is Portland; the roof is covered with green Westmoreland slates; a slight iron cresting, still of Greek character, runs along the ridges; the glazing, it need scarcely be said, is of British plate, in single squares. The floors are Barrett's fire-proof.

The endeavour after novelty of design is not confined to the exterior; and the iron-work of the ground-floor especially is carefully studied, with the object of producing a highly ornamental effect without resorting to sham in any way. The columns, of cast-iron, have delicately-foliated capitals, carved brackets, enriched base mouldings, and so on, all of iron fitted on the plain casting.

The girders are the every-day box girders, of rolled iron, but no less ornamental. The sides are filled in with cast-iron panels, perforated in a pattern, fastened to the top and bottom flanges and the boxes over the columns covered with well-carved medallion plates, all in symmetrial lengths. The rivet-heads on the soffit are also covered with cast-iron paterae, screwed on. The iron-work is thus, at little cost, rendered the most ornamental feature in the interior, and its effect of lightness is universally remarked upon.

Credit is due also to the architect and Mr. Stewart for their having taken considerable pains in making the experiment whether colour decoration may not be introduced into places of City business. The attempt is one that requires more than ordinary discretion; but when we bear in mind that the National Provident Institution is largely identified with the "Friends," that the decorator himself is a member of that most respectable and unimpassioned body, and that the architect in this case has frequently stood up as a champion of the little-colour-if-any school, we may be satisfied that as little colour as possible has been here ventured upon. It is enough for us to point out that the attempt has been fairly made, and to say that we believe "City men," who must be the judges, do not disapprove.

As regards that satisfaction of the client which every architect considers to be his boast when unreservedly accorded, it must be a satisfaction to Mr. Kerr to know that at the annual general meeting of the Institution, held on the 22nd of December, when there were assembled a large number of that British public which always claims full license to be allowed to differ, there seemed to be no difference upon the approbation of the building. For our own part, we point to it with very great pleasure as one of the most successful works of its class in the city of London.

HOLBORN VALLEY.

IMPELLED by the tendency of public opinion, and by the many colossal works now meditated in new causeways, bridges, and underground railways, the Committee of Improvements, as representatives of the corporation, have set themselves seriously to consider how to bridge over the worst of City grievances—Holborn Valley. It is proposed to raise the driftway 12 feet 6 inches at the lowest part, commencing at Hatton-garden and terminating at a corresponding elevation on Snow-hill, on the traverse route from about the site of the old Fleet Prison; an ascending gradient being formed, extending into Victoria-street to about the point where Cowcross-street crosses that line of desolation. The whole of this *terra di lavoro* would thus become trotting-ground; and by so small a reform of their ancient ways, the corporation would save in one year, for the community at large, at least one half of the money expended in consummation of the work.

If the loss of time and labour incurred by the carriages, omnibuses, and teams be taken into account, the computation of benefit resulting from the embanked street now meditated must confer upon civic commerce advantages beyond estimation; but, viewing the waste and ruinous state in which corporate property has lain dormant for fifteen years, the outlay must prove most valuable even as an investment. What but its inaccessibility, coupled with the *incertitude as to future plans* for raising the route, or for bridging over the valley, could have continued such a site in the very heart's core of the City, as "the abomination of desolation" for so long a period?

The improved system of subway for water and gas mains ought certainly not to be omitted in the causeway.

Owing to the same want of centralized power, the valuable property in Victoria-street, Westminster, has been equally long a disgrace to the western division of the metropolis: both these sites offering extraordinary incentives to invest money in reproductive building, have astonished all visitors to London, more especially Parisians, who have seen in a capital of far less commercial wealth, boulevards, public structures, and monuments arise where antiquated slums defiled the position.

It is to be hoped that the spirit evinced in the meeting of the Improvement Committee, as announced by the press, will not be suffered to slumber; and that this commencement may be made in the reforms of structural London, as the first instalment of what is due to a great and forbearing people, who have suffered with fortitude straits and obstructions in every quarter, to bar the concentrated traffic of the universe.

The strong desire to grapple with this great metropolitan project, as expressed by the chairman of the Improvement Committee and the corporate surveyor in the interview with Mr. Cowper, induces the hope that the work may be soon taken in hand. Although the underground line will take much of the passenger-traffic, and goods transmitted by railways; still this great leading thoroughfare needs reform all the more, since it is the point where all the lines converge and concentrate; besides that, as is invariably the case where new routes are opened up, the traffic of intercommunication by short traverses is trebled or quadrupled.

QUONDAM.

DIET, FAMINE, AND PESTILENCE.

IN the journal of a political mission to Affghanistan, in 1857, by Mr. H. W. Bellew, medical officer to the mission, a useful work, which has recently been published, we find the following instructive notes:—"Our time has been spent mostly within the limits of our Residency; the mission only moving out for a few hours' exercise daily, either for a ride at sunrise, or for quail shooting in fields outside the city walls. On these occasions, whilst traversing the filthy lanes of the city in our egress and ingress, we had full and painful proof of the sufferings of the people from the combined effects of scarcity and pestilence, for epidemic small-pox, which first made its appearance in the city shortly before our arrival, was now raging with terrible virulence, and greatly multiplied the horrors of the famine. Almost every house had its doomed, dying, or dead, whilst the houseless lay naked in the public thoroughfares,—a most sickening and disgusting mass of sores and corruption, in the silence of death, or in the ravings of delirium, or the pangs of starvation, filling the already foully-tainted atmosphere with most piteous moans and cries, a feast to myriads of flies. . . . ." The

other parts of the description show a more terrible picture than the above. "But," says Mr. Bellew, "most fortunately the pestilence, which was so rife in the city and surrounding villages, hardly existed within the citadel," a fact for which, the medical officer says, "no satisfactory explanation could be found." We, however, think that the reason is sufficiently obvious, for he says that it was somewhat *cleaner* than the rest of the city, and *less densely peopled*: "it was impossible to prevent a constant tide between it and the infected quarters." Its inhabitants, also, consisting as they did of the troops and adherents of the heir-apparent and their families, were better supplied with provisions than the generality of the townspeople. This would also have a beneficial influence; "but yet," says Mr. Bellew, "not sufficient to account for their almost total immunity from the disease, unless one is allowed to suppose that the well-cared for native is less predisposed to the contagion than the starved, so as in a measure to be protected from it. Besides, the fact of most of the natives of this country having already had small-pox in their youth, either by natural means or inoculation, may have had some weight in protecting the better classes from a second attack."

In this instance we have another example of the effect of sanitary provisions; for we find that, in the citadel, which was comparatively clean (although it may not have been all that could be wished) and the people were better cared for, notwithstanding that the pestilence raged around, and there was constant communication, the inhabitants escaped without any great extent of damage.

GENERAL MEETING OF INSTITUTION OF CIVIL ENGINEERS.

ON the 16th ult., Mr. John Fowler, Vice-President, in the chair, the annual general meeting was held.

The tabular statement of the transfers, elections, deceases, and resignations, showed that the number of elections had been 72, of deceases 15, and of resignations 2, leaving an effective increase of 55, and making the total number of members of all classes on the books on the 30th of November last, exactly 1,000. This was an increase of nearly 20 per cent. in the last five years, of which about 6½ per cent. occurred in the past session.

The abstract of receipts and expenditure, as prepared by the auditors, showed that the current subscriptions had exceeded those of the previous year by from 7 to 8 per cent., and that the income arising from the several stocks held by the Institution was much larger than formerly. With regard to the expenditure, there were several exceptional charges; and the very large sum of upwards of 1,000*l.* had been paid on account of printing the minutes of proceedings. Still, however, the total disbursements had been less than the receipts from subscriptions and fees alone, without including the other sources of revenue.

During the year the "Miller" bequest of 2,000*l.*, invested in 2,133*l.* 6s. 8d. Consols, which had been left for the general purposes of the Institution, had been received; and also the "Errington" bequest of 1,000*l.*, now standing in Great Northern Railway Company 4 per cent. Debenture Stock. It having been found that there was a considerable balance of dividends arising from the "Telford" fund, which had not as yet been expended in annual premiums, it was deemed advisable to consult the honorary solicitor on the subject. Acting on the recommendation of Sir Roundell Palmer, Her Majesty's Solicitor-General, this balance, amounting to 1,669*l.* 8s. 6d., had been invested in the purchase of 1,775*l.* 19s. 8d. Consols. The funds now under the charge of the Institution were—General Funds, 8,133*l.* 6s. 8d., yielding an annual income of 292*l.* 12s., and the Telford, Manby, and Miller Trust Funds, together amounting to 8,194*l.* 12s. 11d., which produced, in the last financial year, 141*l.* 6s. 8d., 9*l.* 12s. 6d., and 119*l.* 6s. 11d. respectively. There were, besides, the balance of dividends arising from the Telford Fund, represented by 1,775*l.* 19s. 8d. Consols, the current balance at the bankers', of 458*l.* 8s. 2d., and on deposit on account of the Building Fund, a sum of 447*l.* 7s., making a total of upwards of 19,000*l.*

After the reading of the report, Telford Medals were presented to Sir Charles Augustus Hartley, Messrs. J. H. Müller, J. Paton, J. Abernethy, and J. Bailey Denton; a Watt Medal to J. D'A. Samuda; a Stephenson Prize of twenty-five guineas to Sir C. A. Hartley; Miller Prizes of fifteen guineas each to J. H. Müller and J. Paton; Council Premiums of Books to Captain Douglas Galton, R.E., and Messrs. J. Brunlees, H. C. Forde, C. W. Siemens, J. A. Longridge, and J. Oldham; and the Manby Premium in Books to Sir C. A. Hartley.

The following gentlemen were elected to fill the several offices on the council for the ensuing year: John Hawkshaw, President: J. Fowler, C. H. Gregory, J. R. McClean, and J. S. Russell, Vice-Presidents; Sir William Armstrong, N. Beardmore, J. Cubitt, T. E. Harrison, T. Hawksley, G. W. Hemans, J. Murray, G. R. Stephenson, C. Vignoles, and J. Whitworth, Members; and J. T. Leather, and F. Marrable, Associates.

CHURCH-BUILDING NEWS.

Nocton.—The new church at Nocton has been consecrated by the Bishop of Lincoln. Originally the church at Nocton adjoined the hall, which was destroyed by fire in 1834; but, as additional accommodation was required by the inhabitants, a new church was erected something less than a century ago, near to the village. This church, which was dedicated to St. Peter, must have been built of material unable to resist the weather, for we find that in 1860 it was in a somewhat dilapidated state. As the church was not nearly of sufficient capacity to contain the inhabitants, it was determined to pull it down; and the Dowager Countess of Ripon offered to erect on its site at her sole expense a memorial church to her late husband. Plans were prepared by Mr. Scott; and Mr. W. Huddleston, of Lincoln, builder, was selected to do the work. The new church has been dedicated to All Saints; the late Earl of Ripon's birthday falling upon that day. The church, though built on the old site, is extended on the west, south, and east. It is in the Early Decorated style, and consists of nave, chancel, mortuary chapel, and vestry, with heating vault underneath. The lower part of the tower forms the entrance or porch, on account of the whole village being situate on that side. The tower is roofed in just below the belfry windows, and is intended to be carried out at some future time and surmounted with a spire, the height of both being 120 feet. The exterior of the church is of native walling stone, hammer dressed; and the whole of the dressings, both internal and external, are of Ancaster stone. On the south side of the nave the foundations of a future aisle have been put in, and the arcade is placed in the now south wall, so that the whole of it can be removed with very little trouble. The clerestory windows have also been introduced on the south side. The whole of the roofs are of Memel timber, pane drawn between the rafters. The nave and chancel are covered with plain and ornamental Broseley brindled tiles, and surmounted with an ornamental Staffordshire ridge. The mortuary chapel and the vestry are covered in with lead; the whole of the inside walls being finished in rough stucco. The nave and chancel seats are of pitch pine, and all are open; the seats in the chancel being carved, stained, and varnished. The chancel floor is of Minton's encaustic and glazed tiles: the remainder of the floors are of Garrett's four-inch black and red, laid in patterns. The whole of the windows are glazed with smooth cathedral glass, slightly tinted, and ventilated with Moor's patent: the tracery is glazed in geometrical patterns. The screen between the vestry and chapel is of metal and brass. The capitals of the pillars between the chancel and the mortuary chapel are carved,—one in imitation of the passion-flower, and the two respond capitals in imitation of the rose and the lily. All the carving, internally and externally, is in imitation of natural foliage. The internal shafts of the windows of the chancel, chapel, and west end of the nave, are of Derbyshire polished marble. The tower-door, tower, belfry, vestry, and heating vault, are all framed of pitch pine, covered on the outside with oak boards, hung with wrought-iron ornamental bands. The church-yard, which is four times as extensive as it was before, is enclosed within a stone wall of the same description as the church, with Yorkshire stone coping: the entrance-gates from the park and the road are of framed oak, hung with ornamental bands. On the east side of the church is a very fine old chestnut tree, supported by nearly 100 props: the branches cover a large extent of ground, the diameter being 100 feet. The cost of the church up to the present time, is upwards of 5,000*l.*; and, of course, the expense of the tower and spire will be considerable. A statue of the late Earl of Ripon has been placed in the chancel. The figure, which is in a recumbent posture, is dressed in peer's robes, and both it and the couch are in Carrara marble. The tomb was designed by Mr. Scott, and is of Devonshire marble and Bath stone. The whole of the work was executed by Mr. M. Noble, the sculptor. The whole of the monuments which were in the old church have been placed in the new one.

Washingborough.—The ancient church of St. John, Washingborough, after an extensive restoration, has been re-opened by the Bishop of Lincoln. Of late years large sums have been expended in the reparation of this edifice: in 1859, by the liberality of the incumbent, the chancel was restored at a cost of 500*l.*; and in 1861, the south aisle was rebuilt and an apparatus for thoroughly heating the church was introduced at a further cost of 360*l.*; whilst an additional sum of about 800*l.* has been expended during the present year. The completion of the restoration included the removal of the old roof of the nave and north aisle, and the substitution of a new one of Memel timber, covered with lead; the removal of the old gallery, and the re-opening of the western entrance beneath the tower: the whole of the plastering on the interior of the nave and north aisle walls has been removed, and the rubble walling pointed with dark-coloured mortar: the windows have been re-glazed: the inside masonry has been cleaned of its colour-wash and paint, and restored: all the floors have been taken up, re-faced, and re-laid; the deficiency being made up with new rubbed Yorkshire stone. The benches are part pitch pine and part Petersburg deale, and the pulpit and reading-desk are entirely of pitch pine. The whole of the woodwork of the roof, seating, and pulpit has been stained and varnished. The screen at the east end, and the screen between the chancel and vestry, are of English oak. The restorations were made by Mr. Huddleston, of Lincoln, under the direction of Mr. Goddard and Mr. Scott.

Lexden (Colchester).—The rector of Lexden intends making an appeal to the public to assist him in the erection of a new district church, which is considered to be much needed for the north-western portion of the parish of Lexden, where it adjoins the town of Colchester, and where a suitable site has been secured for that purpose from the National Freehold Land Society's allotment ground, in North-street, on the road leading to the Great Eastern Railway station. It is proposed to build a church capable of holding upwards of 200 persons, and adapted for future enlargement. The sittings will be all free. The first cost would be about 1,150*l.*, of which the purchase of the site requires somewhat more than 200*l.* Plans have been prepared by Mr. H. W. Hayward, of Colchester, architect. The position of the proposed church has been staked out on the intended site in North-street, at the corner of Colne-road.

Bray.—The church of Bray, after considerable repair and restoration, has been re-opened by the Bishop of Oxford. The work of restoration began above three years ago, in the chancel; and has been continued, with little interruption, to the present time. Large portions of the work have been accomplished by individual parishioners. Some of the expenses have been supplied by a rate, while a large sum has been raised by general subscription. The whole has proceeded on one uniform plan, designed by Mr. T. H. Wyatt, of London. The roofs are new throughout. The walls of the nave have been heightened. Unsightly masses of walls, which had obstructed the sound, and shut out all view of the chancel, have been removed, and the building has been strengthened by new arches and buttresses. A lofty decorated arch now connects the nave with the chancel. The north wall, which was in a dangerous condition, has been rebuilt. The old pillars, composed of chalk and rubble, have been cut away from under the arches on each side of the nave, and pillars of stone substituted. Low open seats, of one uniform pattern, have been placed throughout the church. An organ has been remodelled and adapted to a new position by Messrs. Bevington. A warming apparatus has been supplied by Mr. Haden, of Trowbridge. Six coloured windows by Wailes, O'Connor, Hughes, and Lavers & Barraud (two of them after designs given by Mr. E. Street), occupy the eastern and western terminations of the church. Three windows in grisaille work have been placed by Lavers & Barraud in the south wall. The stonework of many of the windows is new, but the old forms and traceries have been preserved. The works have been executed by Mr. Foster, of London, and Mr. Vickery and Mr. Silver, of Bray.

Lower Beeding.—The church here has been re-opened. The greater part of it has been rebuilt at the sole expense of Mr. W. E. Hubbard. By addition of two side aisles, and a lengthening of the west end of the church, a considerable in-

crease has been made to the number of sittings. The improvements have been made under the direction of Mr. Habershon, of London, as architect, by Mr. Patman, as builder. The usual obstruction occasioned by the pillars upon which the arches rest has been obviated by the introduction of double pillars of Purbeck marble, surmounted by capitals of Ancaster stone, carved with representations of fruit and flowers. The seats, which are of pine, are open and uniform. The roof is open, in the Tudor style, the ends of the hammer-beams being ornamented with shields, painted with a variety of ecclesiastical devices by Mrs. Hubbard. The triple window in the chancel is filled with stained glass, executed by Mr. Wailes, of Newcastle. The three great events in the history of our Lord, His crucifixion, resurrection, and ascension, form the subjects which are represented. It is also adorned with medallions, containing figurative emblems of the four Evangelists, the "Agnus Dei," &c. This window was the gift of Miss Hubbard (Mr. Hubbard's sister). The west window, also executed by Mr. Wailes, and presented by Mr. and Mrs. Stuart Rendel, contains in one compartment a representation of the Baptism of our Lord, and in the other His Blessing Little Children. The stained-glass windows at the ends of the north and south aisles were given by Mrs. and Colonel Boldero, as a memorial to the late Mr. H. Boldero, of South Lodge.

STAINED GLASS.

Chapel of St. Cross Hospital, Winchester.—The two upper Norman windows at the east end of the choir of this peculiarly interesting edifice have just been enriched with stained glass illustrating the resurrection and ascension of Christ. These windows have been designed and executed by Mr. Wailes, of Newcastle, under the superintendence of the architect of the Hospital, Mr. Butterfield. This is another step towards the thorough restoration of this fine old Norman church, which there is every desire on the part of the authorities, we are told, to carry out, did the Hospital funds permit.

Watford Church, Northampton.—A stained-glass window, by Messrs. Heaton, Butler, & Bayne, of London, has been set up by Lord Henley, in the east end of this church to the memory of the late Lady Henley. The window has five lights, and the subject of "Mary hath chosen that good part" occupies the three centre ones. In the side lights are the "Six Acts of Mercy." The family arms are introduced at the face of the centre light. In the tracery are the twelve apostles.

Sherborne Church.—A memorial window has been erected in the south aisle of the nave of Sherborne Church, to the memory of Mr. George M. Butt, late M.P. for Weymouth, and a native of this town. At the top of the window is the monogram, I.H.S. Underneath are ranged four angels, bearing shields, upon which are emblems of the crown of thorns, the nails, the hammer and pincers, and the sponge and spear. Below these are angels bearing scrolls. Immediately beneath, and in the centre of the window, are three large representations of incidents of the Saviour's trial and burial. On the left is Joseph of Arimathea: on the right is Joseph vindicating our Lord before the High Priest, begging the body of Jesus; and in the centre, Joseph laying the body in his own new tomb. Three guards are represented below these subjects, sleeping at the mouth of the tomb.

St. Peter's, Chester.—A memorial window to the late Prince Consort has been erected in St. Peter's Church, Chester. The subject is the "Last Supper," and the inscription at the base of the window runs,—"In memory of the great and good Albert Emanuel, Prince Consort, who entered into immortality Dec. 14, 1861." It was designed and executed by Messrs. Heaton, Butler, & Bayne. The same firm have in hand another Albert Memorial window for St. Michael's Church, Coventry, the subjects of which are from the life of Moses.

Thorne Church.—A stained glass window has just been erected in the parish church of Thorne, to the memory of the late Rev. E. Rudd, who was incumbent of the parish for upwards of fifty years. The subject of the window is the resurrection of our Saviour. The work was intrusted to Messrs. Clayton & Bell, of London, who were very much limited in price. The middle compartment represents our Lord rising from the tomb. In the light on the south side are the three Marys coming to anoint the body, and beneath them one of the Roman soldiers starting back with horror at the sight of the rising Saviour. In the light on the north side there are two angels rolling away the stone. In the tracery above are the figures of the four Evangelists. In the three lower divisions of the window there are also devices. The centre one is occupied by the arms of the deceased, and on either side are figures of angels bearing scrolls. The cost of the stained glass and stone-work together is 100*l.*

Selby Vestry.—The Feoffees of Selby have collected some of the different coats of arms from the windows of the Abbey Church, and placed them in the east window of the vestry. This glass is interesting from its antiquity. The royal arms are emblazoned as in the time of Richard I., and without the *fleur de lis* of France, which was afterwards quartered on the English shield. Some of the glass must, therefore, be about 700 years old; yet it retains its full brilliancy of colour. Along the margin of the new window is the inscription stating that it was "restored by the Feoffees of Selby, Robert John Parker, treasurer, 1861." There are two modern stained glass windows in the church,—one in memory of a departed Selby worthy, and another window has now been ordered (representing the history of Abraham), which will be placed in the north aisle, in memory of another Selby worthy, Mr. James Banks, who died a few years ago at the patriarchal age of ninety-two years.

St. Mary's Church, Ryehill, Newcastle.—On Christmas Day, a new stained-glass window was inaugurated in this church. The window is the production of Mr. H. M. Barnett, of Newcastle. It is erected over the communion-table in the church, being a gift of the congregation, in commemoration of the consecration of the edifice by the bishop of the diocese. The window, as described in the *Gateshead Observer*, includes fifteen groups of figures, or subjects, selected from the life of our Lord; and in the construction of the window regard has been paid to the effect of the light. The groups of figures are ranged in tiers, and are respectively as follows:—The Baptism, Adoration, Annunciation, Dispute with the Doctors in the Temple, the Sermon on the Mount, The Betrayal, The Last Supper, The Crucifixion, the Agony in the Garden, the Entombment, the Resurrection, The Incredulity of Thomas, The Ascension, Charge to Peter, and the Transfiguration. The upper portion of the window consists of two quatrefoils containing the sacred monograms I.H.S., and A O. Above are the symbols of the four evangelists, surmounted by the emblem of the Holy Trinity, on each side of which are two angels in a sitting position, one bearing the scourge, and the other a crown of thorns. Other two compartments of the window contain angels flying, one holding the cross, the other the pillar. Above all appears the Lamb, surrounded by a halo of rays. The whole of these subjects are balanced by the foliage ornaments—the grape, vine, and passion flower—which form the vesica containing these groups of figures. The backgrounds are all diapered with a variety of foliage ornaments in keeping with the minute sculpturing of the church. The carmine ground is also minutely ornamented; and it is mentioned that the window contains about 10,000 separate pieces of glass, each piece varied as much as possible in tint. The window was exhibited in the International Exhibition of 1862, being the only work of the kind from the north of England.

PROVINCIAL NEWS.

Campsey Ashe, Suffolk.—Works are going on at the Elizabethan mansion, the seat of Mr. J. G. Sheppard, under Mr. Salvin; and on the 23rd ult. Mr. Sheppard gave the whole of the workmen employed on the works an entertainment at the Green Man Inn, Tunstall, the chair being taken by Mr. W. Oldreive, the clerk of the works.

Bristol.—The block of buildings recently erected on the site of the old sugar-house, near the Stone Bridge, for the firm of Messrs. Waterman & Co., the extensive leather merchants and wholesale boot and shoe manufacturers, of this city, has been opened with a *soirée*, at which the *employés*, numbering upwards of 200, were present. The premises consist of two massive buildings, to which Messrs. Pope & Bindon, the architects, have given an Italian frontage, resulting in a building the appearance of which ranks with the most pretentious structures forming the many busy hives of industry in this ancient city. The front building consists of stock-rooms and cellarage; and in the rear is the manufactory, with the rough leather-room, riveting-rooms, and machine-room, and capable of accommodating 600 workmen.

Taunton.—The Memorial Hall, erected in connexion with, and contiguous to, Paul's Meeting, has been inaugurated. The church and congregation of the above place of worship had determined to commemorate the bicentenary of 1662 with a lasting memorial. At that time there was no room connected with the chapel suitable for the holding of meetings and the delivery of lectures. Besides this, extra class-rooms and school-rooms were required; and it was therefore determined that a hall should be built on a piece of land adjoining the chapel. The new Memorial Hall is a building of Italian character, erected with red brick and Bath stone dressings. The chief front is surmounted by a cornice, in the frieze of which are cut the words "Memorial Hall;" and under the sill of the windows is the following inscription:—"Erected A.D. 1862, to commemorate the two-hundredth anniversary of the Church of Christ worshipping in the adjoining Meeting-house."

Uppingham.—The old rooms, in connexion with the grammar-school here, have for some time past been found inadequate to the requirements of its present position and increased numbers. It was resolved by the governors of the school, at their meeting in April last, to erect at once new school-buildings. They consist of class-rooms and library, each measuring 28 feet by 22 feet, and of a covered playground, 32 feet by 28 feet, approached on two of its sides by an open arcade. The large school-room above these measures 88 feet by 28 feet. The height from the ground to the ridge of these buildings will be upwards of 56 feet; and, connected with the school-buildings, by an open porch, a chapel is being erected by subscription. The architect is Mr. G. E. Street; and, when the whole is completed, there will have been expended 40,000*l.*

Manchester.—The new road between Manchester and Northenden has been formally opened. The road, according to the local *Courier*, branches from the Didsbury road at Withington, and leads almost in a direct line to the church and village of Northenden, and is about two miles in length, and nearly level the whole distance. The river Mersey is crossed at Northenden by an iron bridge, and leads into the village close by the church. The road was constructed under the supervision of Mr. J. J. Mawson, of this city, civil engineer, by Messrs. Worthington, contractors; and the iron bridge was erected by Messrs. Ormerod & Co, of Hulme.——Attached to the London Hotel, Bridge-street, a spacious music-hall has just been erected, which is intended to be conducted on the same plan—both as to performances and accommodation for the public—as the Oxford Concert Hall, in Oxford-street, London. The new building is 170 feet long, inclusive of the stage; 90 feet wide; and 64 feet in height. There are two side galleries, with a balcony at the end opposite the stage. This is that which adjoins the hotel; and three tiers of boxes, having their entrance from the hotel, are here erected, which are intended for families and private parties wishing for reserved accommodation to witness the performances. The hall will be illuminated by a number of sunlights suspended from the roof; and the building will be fancifully decorated in the Chinese style. It possesses a proscenium and stage, the opening being 38 feet wide, and 47 feet in depth. The scenery and decorations are by Mr. Morley. Mr. W. Maugnall is the architect, and his designs have been carried out by Mr. Neill, of Strangeways, builder. The hall was to be opened on Christmas Eve.

SCOTTISH NEWS.

Leith.—Various new buildings have been erected and are in course of erection here. The Corn Exchange is now open for the transaction of business. The entire cost of the building amounted to about 7,000*l.* Other buildings of a less imposing but important character are also in course of erection. Amongst these may be mentioned a foundry, near the Junction-road, which will be the most extensive of the kind in Edinburgh or Leith. A large warehouse is also being constructed in Salamander-street; and a flour-mill at Hillhousefield is well advanced. The English church in Constitution-street, although in a state approaching completion as regards its outward appearance, is progressing very slowly. The slaughter-houses are now almost completed; and as they are at some distance from the crowded parts of the town, the public will be well rid of a nuisance. There are also a number of shops and dwelling-houses in course of construction. There is still a great want of convenient houses for the working classes, however. Several building societies contemplate the erection of dwelling-houses for the working classes in Leith, and the civic authorities are actively endeavouring to induce working men themselves to move in the matter.

Cupar.—The new Corn Exchange has been formally opened as a grain market. The building, which is calculated to hold 1,200, is 84 feet by 52 feet inside. The roof is arched by iron girders, ornamented, and the height of the ceiling at the highest point is 50 feet. The exterior of the building is of a plain description, with the exception of a spire, in the French-Gothic style, rising 136 feet from the ground. The architects were Messrs. C. Douglas & J. J. Stevenson, of Glasgow; and the contractors, Messrs. Wallace, builder; R. Adam, wright; Bryson, plasterer; Duncan, slater; Peattie, painter; Ramsay, gas-fitter, &c. The cost of the undertaking, including 1,000*l.* for the site, is about 3,000*l.*

Alloa.—The Alloa Grain Market, instituted in 1859, has been merged in the Alloa Corn Exchange. The new building is not only suitable for a grain market, but adapted for a hall for public meetings, lectures, and musical entertainments. It is capable of accommodating an audience of 700. The Exchange is situate in High-street, within easy reach of the railway station. The front, which is parallel with the west side of the High-street, is built in the Scottish Baronial style, with an entrance-door in the centre, under a projecting six-light mullioned window. The body of the hall is 86 feet long by 38 feet broad, besides which a gallery is erected over the entrance-door, and a committee-room adjoins the other extremity. The hall is lighted principally by a range of plate-glass windows on each side of the roof, and mullioned windows in each gable. The cost of erection is about 1,000*l.* Mr. Thomas Frame, of Alloa, was the builder.

Glasgow.—The monument in honour of the late Lord Provost Lumsden, in front of the Royal Infirmary, has been inaugurated. The statue is in bronze, and was modelled by Mr. John Mossman, of Glasgow, and cast in London. The figure, which is 8 feet 6 inches high, is draped in modern costume, and holds in the right hand an eye-glass, and in the left a scroll. It stands on a pedestal 10½ feet in height.

Dumbarton.—The Free Church congregation of this town have arranged to build a new place of worship in High-street, at the corner of Brewery-lane. The building, which has been designed by Mr. Honeyman, architect, Glasgow, is to be in the Gothic style, with a spire rising to a height of 110 feet. The building is to accommodate from 700 to 800 persons.

Hawick.—The town council have employed Mr. Bateman, C.E., the engineer of the Glasgow (Loch Katrine) Waterworks, to examine the town and neighbourhood, and report on the best means for obtaining an ample supply of water. Mr. Bateman has just sent in his report. He recommends the extension of the present waterworks, as being, on the burgh lands, sufficient to meet the present requirements of the inhabitants at the smallest cost, and the best water. The drainage ground extends to 233 acres; and taking the available rain-fall at the low estimate of 18 inches per annum, it would yield about 258,000 gallons daily. This could be collected in a reservoir to hold twenty-five millions of gallons, of 250,000 gallons per day for 100 days, in addition to what the springs will afford during that period. The cost of the reservoir, all works, land purchases, and connexion with present reservoir will be about 5,800*l.*; and the cost of distribution in pipes about the town will be from 3,000*l.* to 3,500*l.* As regards the sewerage, Mr. Bateman reports that the natural facilities are great, the river Teviot forming the channel into which the sewage waters must be discharged. The cost of sewerage would in all amount to about 5,000*l.* The council have remitted the report to the sanitary committee to consider it in detail.

SCHOOLS OF ART.

The Stourbridge School.—The annual meeting of this school has just been held; Mr. H. F. Vernon, M.P., in the chair. The report for the last year congratulated the friends of the school upon a continued increase in the number of students, and also in the number examined and passed by the Government Inspector of the second or higher grade. The number of students in the central school in 1861 was 120; in 1862, 141; number of students in glass trade, in 1861, 27; in 1862, 30; number in national and other schools, 1861, 680; 1862, 425; number passed and marked "fair," 1861, 18; 1862, 25; number passed in first or lowest grade, 1861, 20; 1862, 30; ditto in second or higher grade, 1861, 16; 1862, 18; medals awarded, 1861, 9; 1862, 10; prize students, 1861, 3; 1862, 5. The falling off in the pupils in national and other schools was owing to the Government giving certificates to masters of national schools, enabling them to teach drawing. This, for the present, reduced the number of pupils taught through the medium of the Schools of Art; but, by giving a largely-extended number of pupils of national schools a knowledge of the mere rudiments of drawing, the effect would, in the end, be to greatly increase the number of students in the Schools of Art. Under all the other heads the increase had reached a point never from the first opening of the school before attained. The council, continued the report, had, year by year, had the unpleasing duty of directing attention to the small number of students connected with the glass trade,—a trade necessitating, in order to arrive at excellence, the aid of art; but they had the pleasure of announcing that there were now in the school more students connected with the glass trade than there were in 1858 in all the schools in the kingdom. The Exhibition of 1851 proved that art had not been called to the aid of the English to the same extent it had to the continental workmen in glass; but the Exhibition of 1862 gave evidence that the English workmen had, in the intervening years, availed themselves of the assistance of art, and actually outstripped their former successful competitors. After the report had been read, the chairman proceeded to distribute the prizes and certificates.

The Bromsgrove School.—This school has also had its annual meeting. Mr. J. S. Pakington was in the chair. The report of the committee stated that the total number receiving instruction during the past year in drawing has been 231, being an increase of 16 over the preceding year. This number includes 138 from the national school, and 93 in the central school. Mr. Vernon, M.P., in moving that the report be adopted, said it was satisfactory in many respects: it informed them of the increase of students; the efficiency they had attained; and, lastly, it pronounced the institution to be out of debt. The chairman also expressed his satisfaction with the state of the school, and with the fact that the institution was liberally supported, and that it had contributed its full share to that general improvement in the public taste which now existed in this country. Mr. Pakington then proceeded to give a little advice to the students, conjuring them to avoid all extremes one way or the other,—to avoid attaching too much importance to genius, or putting too high an estimation on what is called the ideal.

RAILWAY MATTERS.

Great Malvern Railway Station.—The works of the new railway station at Great Malvern are rapidly approaching completion. The entrance is by a lobby, in which are situate the ticket windows of the booking-office. The platforms are spacious, and covered with an iron and glass roof of an ornamental character. The accommodation afforded by the new building consists of ladies' first and second class waiting-rooms, with dining-rooms *en suite*; second-class refreshment-rooms, kitchens, pantries, and large wine and ale cellars; telegraph office and station-master's office, which, by a bay window, takes in the view of the line both up and down; the porters' rooms, and all the necessary offices. The up and down platforms are connected by an underground way. The approach to the new Imperial Hotel is by a covered passage from this platform. A wooden turret is placed over the principal entrance, rising to a height of about 50 feet, and contains a clock. The walls are built of Malvern-hill stone, with Bath stone dressings. The style being Gothic of the period of Charles VI. of France. There is some good carving in caps of columns and elsewhere, by W. Forsyth, who has cleverly introduced the foliage of the plants of the neighbourhood. The buildings have been carried out from designs and under the superintendence of Messrs. Elmslie, Franey, & Haddon, architects, by the Messrs. Wood, of Worcester, builders.

Singular Accident at Manchester.—At the London Road Station, Manchester, in order to facilitate the erection of the new station, the contractors had erected a scaffold about 35 feet or 40 feet high, to the top of which a six or eight-horse steam-engine was elevated, for the purpose of raising the stonework. In the absence of the driver, this engine started along the runners; and before any one could reach the scaffold to stop it, it fell over the end of the framework and dropped into Store-street, a depth of 70 feet. Several passengers in Store-street had narrow escapes.

Gas in Trains.—The Scottish Central Railway has adopted gaslight in one of the passenger trains, between Edinburgh and the North. The trial has been successful. The gas is supplied from a large boiler at the Perth station, which is filled from the gas-works there. The supply for the train is kept in an india-rubber gasometer of about 6 feet square, defended by iron rods, and kept in a compartment of the break-van. When full it occupies the whole of this compartment; but as the gas passes away it is compressed by a weight on the top. The gas is conveyed into it from the boiler by a large tube in the bottom of the van, and is conveyed out of it to supply the carriages by a smaller tube, also in the bottom. This tube again passes up through the anterior part of the van to the roof; and the gas is thence conducted along the carriages by metal pipes, connected by india-rubber tubing, and passes down by brackets into large and strong glass globes in the various divisions of the carriages. The supply necessary for the double journey to Perth and back, which occupies somewhat less than eight hours, is about 260 cubic feet: and the expense, after the fittings are completed, is estimated at one-half of that of the ordinary oil apparatus. The system is now in operation on the Lancashire and Yorkshire, London and North-Western, and Great Northern Railways.

Miscellaneous.—The new railway-station in Rome, opposite to the Baths of Diocletian, has been opened. A fall of part of the mountain near San Germano took place the same night. The passengers in a train which was thus stopped spent the night in the train.——Indian soldiers are now being employed in making a tunnel under the Indus, to form a link in the great chain of railroad between Calcutta and Peshawur.——At Lisbon, on the 18th December, a train with 200 workmen was passing over the bridge of Sor on the Great Eastern Railway, when the bridge gave way and the whole were precipitated into the river. It is reported that 100 people were killed, and many others wounded.

ACCIDENTS.

Fall of a Tunnel.—A portion of the roof of the tunnel at Orkenshaw, on the Cleckheaton branch of the Lancashire and Yorkshire Railway, and about a quarter of a mile from the Low Moor station, recently fell in and blocked up the road. The portion which fell is about twelve or fifteen yards off the end nearest Low Moor. The earth and material covering the tunnel at that end was about 18 feet deep; and at the same point the tunnel was crossed by a common road which was temporarily obstructed by a chasm. Between seventy and eighty men were quickly set to work to clear away the *débris*, and the line is now again open for traffic.

Damage to a Church by Gales.—Saint George's Church, Leicester, has sustained considerable damage by the late gales. The vane fell from its pinnacle, carrying with it the iron rod and the stone which formed the apex to the spire, making a chasm in the southern roof of the tower, and nearly demolishing the stone stairs which lead to the gallery on that side of the church. This edifice has been somewhat unfortunate. In June, 1835, the east window was shattered to atoms by a destructive hailstorm. In 1846 the spire was struck by lightning. On examining the rod after the recent accident, it was found, according to the local *Advertiser*, that it did not go below the bottom of the stone which formed the apex more than a few inches, whereas it is usual to drop the rod into the stonework some six or more feet, securing the same by a proper stay and a nut screwed on to the bottom of the rod.

Fall of a Chimney Stalk.—At Glasgow, a chimney stalk 120 feet high has been blown down. Fortunately it fell in an easterly direction, as there was scarcely another way it could have fallen without almost certain destruction to human life.

Fall of Floors.—The flooring of the fourth story of a flag spinning manufactory at Broadford, Aberdeen, fell in lately. In its descent it carried away the other floors, and a number of workmen were buried in the ruins. Three are missing and supposed to be killed, and several are severely injured.

London, Chatham, and Dover Railway.—On Wednesday, part of a viaduct on the Metropolitan Extension of the London, Chatham, and Dover Railway gave way. The second station on the line is that at Clapham, and at about 200 yards distant the line crosses the Clapham-road and the Bedford-road by means of iron-girder bridges. Between these two bridges is a viaduct, consisting of nine arches of massive brickwork, standing in a field. All this structure appeared to be quite

safe up to the evening of Tuesday, when there were slight indications in the parapet of a subsidence of one of the centre piers taking place. On Wednesday morning, at about half-past six o'clock, the men on watch found that the pier began to sink rapidly, and before long it had subsided upwards of 4 feet into the earth, carried with it the next pier, and, as a matter of course, the centre arch and portions of the arches on each side. As to the cause of the subsiding of the pier no positive reason has yet been assigned.

Chester.—The Exchange and Town-hall of Chester have been destroyed by fire.

FOREIGN AND COLONIAL NEWS.

M. KRAUS, of Mayence, architect, has submitted to their Royal Highnesses Prince and Princess Louis of Hesse plans and designs for a palace about to be erected at Darmstadt.

The French Academy of the Beaux Arts, at its last sitting, elected as corresponding member M. Dupré, statuary, at Florence; M. Fonteca, painter to the king, at Lisbon; M. Vaagen, archæologist, at Berlin; and Mr. John Pye, copper-plate engraver, in London.

The excavations at the Palatine Palace of the Cæsars, at Rome, are being pursued with great activity. Water, according to *Galignani*, has sprung forth in abundance there, so that a fountain has been arranged. The amount granted yearly by the French Government for the researches is 40,000 fr.

A new bridge for the passage of railway carriages over the Rhine has just been opened to the public at Mayence. The length of the bridge from one side of the river to the other is 1,212 feet; and it is said to have cost 3,000,000 florins. This is the third bridge of the kind that has been built over the Rhine within a few years. The two others are at Cologne and Strasburg. It is said that two other bridges are shortly to be thrown over,—one at Mannheim and the other at Coblentz.

The last Cape mail states that the Dutch church at Malmesbury, built less than two years ago, at a cost of 6,000*l.*, fell in on November 15. It was supposed that the continuous rains had sapped the foundations. The various public works in the colony, which had been more or less interrupted by the severity of the winter weather, were being pushed on vigorously. The railway works were almost completed to Klapmuts. The line was about to be further opened from Stellenbosch to Bennettsville, a few miles short of the Paarl. The Wynberg Railway was also progressing favourably: a dispute had arisen between that company and the Cape Town and Wellington Company relative to the junction of the lines at Salt River and the traffic thence into Cape Town.

Since the Cathedral of Notre Dame, Paris, after having been closed several months, was opened to the public on the occasion of the solemnity of Christmas Day, it has been crowded with visitors. The decorations most noticed, according to the daily papers, are the choir, with its grand altar, statues of bronze and marble, two archiepiscopal thrones, carved woodwork, new gilt gates, stained-glass windows, and chapels. The mausoleum erected to the memory of Archbishop Affré, who sacrificed his life on a barricade in 1848, is now finished, after a labour of fifteen years. The statue of the archbishop, as large as life, is placed on a pedestal. He is represented falling on a barricade, holding an olive-branch in his right hand and a crucifix in his left. On the façade of the pedestal, which is of French marble, is a bas-relief, representing the entire scene of the death of the archbishop on the barricade. Workmen are still engaged in the Harcourt Chapel in placing a grand Madonna of Carrara marble on a pedestal. The statue, which is larger than life, was lately brought from a Carmelite convent at Rome. It is believed to be the work of a Florentine sculptor,—either Coysevox or one of the Coustons.

THE STAGE.

English Opera, Covent Garden.—The pantomime here is from the pen of Mr. H. J. Byron, who has catered for three other theatres also: it is founded on the suggestive story of "Beauty and the Beast." The introduction is very good, aided as it is by the Paynes, and includes some very striking "changes" and effective scenery. The moving about of large masses of trees could not be managed on any other London stage: these are wholly supported from below. The transformation scene, invented and painted by Mr. W. Callcott, under the title of "Moonbeam and Sunlight, or the Descent of Morn's first Ray," is the work of an artist: the sight of it alone is worth the cost of admission. On wood and water the moonbeam and sunlight are contrasted; the sun, of course, ultimately triumphing. Mr. Callcott is entitled to high praise. Miss Hiles, Mr. Weiss, and Mr. Perren are singing in two acts of the "Bohemian Girl" before the pantomime: and the reproduction of the "Lily of Killarney" is promised.

Princess's Theatre.—"Riquet with the Tuft" is a very amusing pantomime. Mr. E. L. Blanchard wrote the opening, and Mr. Beverley and Mr. F. Lloyd have prepared the scenery. The element of beauty preponderates, but that of fun, somewhat less cared for now-a-days, is not absent. A field of fungi which produce imps, a very lovely wood scene with water (the "lake of the lilies"), for a ballet of bouquets (producing some charming combinations of colour), and the transformation scene, are the great points in it. Mr. C. Seyton, who plays Riquet, shows much ability. Those who select the Princess's pantomime for the children's treat will not go wrong.

The Strand Theatre.—It is frightful to contemplate the injury done to the English language and the English drama, and the destruction of agreeable recollections effected, by the nightly performance of such a piece as the parody of "Ivanhoe," now being performed here. Slang, bad grammar, and the evil twisting of words, damage the ear throughout, and the absurdity that ends every piece of music with a nigger dance is carried to the extremity. Whether it be a solo, a duet, or a sestet, the performers think it necessary to terminate it with some variety of the double shuffle. Six times does this idiotically occur in the piece in question, if not more; so that what might be funny in one or two cases, becomes, from repetition, positively disgusting. Something should really be done to prevent the very clever burlesque actors here from doing further damage to public taste.

FROM IRELAND.

THE parish church of Loughinisland, diocese of Down, was reopened by the Lord Bishop, on the 11th of December, after the completion of additions and improvement. Two short transepts have been added, with open-timbered roofs, and double Early English lancet lights in each gable. The whole of the church has been repewed, and an unsightly gallery removed, under the direction of the Ecclesiastical Commissioners' architects. A chancel has been also added for the reception of a huge simicircular-headed window,—a memorial to the late Rev. Wm. Forde, formerly owner of the property in which the church is situate. The chancel has an open-timbered roof, and is divided from the nave by an arch of two orders, the inner order being carried on corbel shafts, with foliated capitals. The flat plaster ceiling has also been removed, and the roof cleaned, stained, and varnished; and Early English lancet lights substituted for the semicircular-headed wooden-mullioned windows formerly existing. A monument has been erected to the memory of the late rector, of Early English character; the carving executed by Messrs. Fitzpatrick, of Belfast; and a pulpit has been substituted for the former unsightly one, the architect for the latter works being Mr. Thomas Drew. The contractor for the whole is Mr. Geo. Stockdale, of Downpatrick.

St. Patrick's Cathedral, Dublin, still continues closed for an indefinite period, the restorations proceeding slowly. The parish church of St. Nicholas, formerly occupying one of the transepts, has been acquired by the Dean and Chapter, and is being rebuilt, and thrown into the cathedral once more. It is stated that the expenditure (at the sole cost of Mr. Benjamin Lee Guinness, the eminent brewer), up to the present amounts to 80,000*l.*

As yet competitors have received no tidings of the Cork Cathedral competition, although ample time for coming to a conclusion has elapsed. We believe that drawings are being packed up to return to competitors, from which it may be presumed that a selection of one or more designs has been made.

Belfast is determined to erect a cathedral for the diocese of Connor; and an energetic movement is being made with the bishop of the diocese at the head; and the subscription list is already in a flourishing state. Messrs. Lanyon, Lynn, & Lanyon, of Belfast and Dublin, have received instructions to prepare plans.

The works at St. Mary's Cathedral, Limerick (under Mr. Slater), have been completed.

Derry Cathedral has been extensively renovated, under the architects to the Ecclesiastical Commissioners; and Tuam Cathedral is to be rebuilt. It is very much to be regretted as one feature in the last scheme, that it is intended to demolish the present church, a fourteenth century building, containing very elaborate and beautiful traceried windows, and other remains of interest; although it is not intended to build upon its site; which, to say the least of it, appears unaccountable.

POLLUTION OF THE THAMES.

AT a meeting of the Metropolitan Association of Medical Officers of Health, held at the Government Offices, Richmond-terrace, Whitehall, Dr. Thomson (Marylebone) in the chair, this subject was brought under consideration by Dr. Burge (Fulham and Hammersmith), more especially in relation to these parishes. He presented to the meeting a report drawn up by himself on the subject, and which had been printed by the Fulham Board. It appears that the Metropolitan Board propose to construct works for the deodorization of the sewage of the western district of the metropolis at Sands End, near Cremorne-gardens, by means of which works nearly 10,000,000 gallons of sewage west of Ranelagh sewer will be subjected to deodorization daily. In consequence of this scheme the Fulham district memorialized the Metropolitan Board in August last, protesting against it as fraught with evils of alarming magnitude to health and property in the locality, as well as tending to pollute the river in general, which the Metropolitan Board are otherwise endeavouring to purify. The Metropolitan Board having replied to the Fulham memorial, a second protest was forwarded to the same Board, inclosing the report depicting the evils which would result from the scheme. Dr. Burge now urged upon the association the necessity of taking up the matter as one of metropolitan interest, with a view to expose its evils and prevent its accomplishment.

Dr. Challice (Bermondsey) thought the subject of sufficient importance to require a special meeting for discussion; for to throw a large amount of sewage into the river even after deodorization would cause a putrefaction throughout the same.

It was resolved that the subject be referred to the general purposes committee to consider and report upon at a special meeting.

ARSENICAL PAPER-HANGINGS.

THIS subject was discussed by the medical officers of health at their meeting on Saturday evening last. The subject was opened by Dr. Orton (Limehouse), who read a paper, full of facts, detailing the evils resulting from inhabiting rooms papered with the common light-green paper, as brought out in evidence before coroners' juries, especially in regard to the deaths of children; and birds also had been known to have died from a like cause. A gentleman present remarked that the evils, in his opinion, were rather of a mechanical than chemical character; or, in other words, that, unless the pigment was scratched or rubbed off, or otherwise inhaled from actual contact with the arsenical substance, no evil would ensue. Dr. Challice (Bermondsey) opposed that theory; for, if arsenic entered largely into the composition of paper on walls, harm must result, though not detectable by a practical chemist. He believed many cases of death attributed to diphtheria were the consequences of arsenic absorbed into the system from the presence of arsenical paper, independent of direct contact therewith. Dr. Liddle (Whitechapel) believed the best green paper had no arsenic; and if there were so much arsenic in paper as stated, or that it was such an evil in that form as alleged, they would hear more of its effects. Dr. Aldis (Belgravia) introduced Mr. Turner, a manufacturer, who exhibited specimens of beautiful light-green paper, destitute of arsenic, which could be produced as cheaply and in as great beauty and variety as the arsenical papers. Dr. Druitt (Mayfair) mentioned the case of a child's death which had been caused or accelerated by having its cot near a wall, the child having picked off the paper and put it into that universal receptacle, the mouth. Dr. Orton mentioned a proved case of twelve birds having died in a week from contact with arsenical papers. Dr. Thomson would recommend persons to have nothing to do with such papers. He had none in his own house, and believed the dark green contained no arsenic.

OUR PUBLIC STATUES AND MEMORIALS.

SIR,—How true and just are the observations in yours of the 13th ult., with reference to our public statues in this country! With scarcely two exceptions in London, viz., the statue in front of the open space of St. Paul's, and the Duke of Bedford, in Russell-square, we possess few attempts at giving importance to the statue and pedestal by subordinate sculpture. Where a statue is erected in a cathedral or church (and here they are out of place) there may be some reason for limiting the sculptor's art in the pedestal; but where a statue is placed externally in a large open area, and where it is of importance to give mass and grandeur to the composition, the pedestal should form an essential portion of the composition; and the aid of the architect should be called in to assist the sculptor, otherwise the whole design would be most wretched. As for placing statues on the summit of a column, it is a most egregious error. How beautiful is the pedestal to Charles I. at Charing Cross! W.

THICKNESS OF WALLS OF "CLOSET" BUILDINGS.

SIR,—I learn that the Metropolitan Board of Works are interfering to prevent the district surveyors from allowing 4½-inch walls in water-closet buildings. I hope they will pause before they put this obstacle in the way of sanitary improvement; and I beg leave to submit,—

1. That closets may be considered as attached or detached offices, and that rules of thickness of walls do not apply as for dwelling-houses.

2. That 4½-inch work has been the common custom under the late Act, and is so to a great extent under the present.

3. That in many cases space would not admit of more; and, further, that an unnecessary expense would be entailed; and

4. That for closets 4½-inch work is sufficient for all purposes. A BUILDING SURVEYOR.

THE LIVERPOOL EXCHANGE COMPETITION.

I AM in receipt of the conditions and instructions proposed by the Liverpool Exchange Commissioners for the guidance of architects who may choose to compete for their new buildings. These, apparently, have been prepared with great care, and a desire to insure fairness throughout; but I would, through your paper, respectfully suggest to the committee, that if it be their object in making the competition a general one to obtain the best suggestions for their work, this object must be considerably defeated by the very extensive requirements, in the way of drawings, which the conditions insist on. I imagine that very few of the leading architects could spare the necessary time, or would enter on such an undertaking, on the mere chance of obtaining any one of the premiums. 1,000*l.* is in itself no doubt a handsome premium, and might be considered sufficient remuneration by the fortunate individual who might obtain it. It strikes me, however, that the interests of the Exchange Committee would be much better secured by a different mode of proceeding, and a different distribution of the money which they propose to expend in premiums, and at the same time have the effect of saving an immense deal of labour and expense to the necessarily unsuccessful competitors.

I would beg leave, therefore, to suggest that, instead of the elaborate geometrical drawings and perspectives (twenty-two in number) which the committee now require, they should in the first instance invite a competition for merely *general designs*, which could be fully expressed by a 20-inch or 16-inch scale plan of each floor, with a general section to show heights, and a perspective sketch, to illustrate the style and treatment of the architecture proposed. All the more important points, such as general arrangement, style, &c., could be fully set forth in these drawings; and, at the same time, condensed in a convenient form for the consideration of the committee.

From the designs thus submitted, the directors to make a selection of say *ten*, which in their opinion embraced the most advantageous features; —that the authors of these ten designs be then invited to further compete in more detailed plans, &c., as at present set forth in the printed instructions, adhering of course to the general features of their original design;—that for the labour and expense thus involved, nine of the competitors should each receive the sum of 200*l.*; and that the architect whose design was considered the best of these ten should be employed to carry out the work (unless there be any reasonable objection against him).

This would appear to me to be a much more reasonable course to pursue in this or any other competition, where otherwise an extraordinary amount of labour must necessarily be expended altogether in vain; and I venture to say is a course which would prove much more satisfactory to competing architects; to those who, in the first instance, might be set aside, by relieving them from the labour and expense of elaborating ideas which would be considered unsuitable; and also to the ten selected, as providing a certain, though it might be inadequate, remuneration for their further labour. T.

*** A somewhat similar plan was tried at Liverpool in the case of the Public Library competition.—ED.

THE WORKS AT ST. MARY'S CHURCH, MINSTER, THANET.

SIR,—With your permission, I accept Messrs. Smith & Son's invitation to criticism;* but whether this will justify them in the eyes of the archæologist and public, I think the latter had better decide, for a person on his defence is not, according to English fairness, a judge in his own case. In a country possessing so many Gothic architects, a proper design might have been obtained for the use and adornment of a wall possessing—at the commencement of the work—such unmistakable marks of age. This north aisle wall *had* one of those old Norman seats of masonry, in its entire range from the inside of the old Pointed Gothic doorway to the north transept, consequently running under this square-headed window of 1350. (Query, 1520?) This venerable seat was part and parcel of the wall of the north aisle, and it must have been hard work severing it from its long attached principal. These seats are only to be found in old conventual churches, and are undeniable proofs of age. This distinctive mark in Minster Church was much prized by the historian and antiquary. This seat is *entirely* obliterated. What shall we call this?—restoration or destruction? By what strain on the inventive faculties can any person, not even claiming the title of architect, make a flat-headed window accord with this old wall. It could *not* have been the original window. As to the flatness of the internal arch being a proof of there always being a level-headed window there, the old Pointed Gothic doorway has an exactly similar arch; so that proves nothing. The roof of nave is also altered in appearance, the old lead being replaced by red-looking tiles. Perhaps this was a pecuniary consideration; not so with the old memorial stones, some of which are taken away; but I hope they will again find a place in the church, as some of the old extinct family names—as Jenkins, Kennett, Proud, and others, should be preserved, without too much attention to prettiness. Such memorial stones as John Potley raised to his wife, who died in 1715, I think should not be sold to assist building private walls with.

CORRESPONDENT OF "S.E. GAZETTE."

SIR,—Will Messrs. Smith & Son, who, fortunately for themselves, are builders as well as *architects*, kindly inform your readers whether they removed the old lead from the high-pitched nave roof in order to meet the expenses of the so-called restoration? or whether, from their careful researches, which they assert to have been so eminently successful, they considered that tile ought to replace it? Such careful restorers ought to have some reason for so materially altering and destroying the general character of this part of the building.

With regard to the flat-headed windows in north aisle, portions of which have been found in the walls, they in all probability replaced pointed windows of the same date as the walled-up doorway. If the miserable arcade at the east end of the chancel, inside, is a specimen of original design, it is to be hoped the architects will in future take some old examples and copy them faithfully; especially with regard to the seating, pulpit, and other fittings; or else get some architect under whose direction they have worked in their proper capacity of builders, to furnish them with drawings. A PASSER-BY.

CASES UNDER BUILDING ACT.

District Surveyors' Fees.—Messrs. Temple & Reynolds, of Metcomb-street, Belgrave-square, were summoned to Wandsworth Police-court, by Mr. A. J. Hiscocks, the district surveyor of Wandsworth, for the non payment of 5*l.*, being the fee for surveying an addition to a building at West-hill, called Melrose Hall, lately the residence of the Pacha of Egypt.

The addition in question was the erection of a fireplace by the side of the kitchen range, with a communication in the chimney, for the purpose of affording extra cooking accommodation during the stay of the Pacha. The defendants were summoned in the first instance for not giving the district surveyor notice, and a nominal penalty was inflicted. The defendants objected to pay so large a fee for such works. The surveyor claimed the fee according to the first part of the second schedule. The words are as follows:—"For every addition or alteration made to any building after the roof thereof has been covered in, the fee shall be half of the fee charged in the case of a new building." It further appeared that the full extent of the surveyor's fee was 10*l.*, Melrose Hall being beyond the limits chargeable for that fee: Mr. Hiscocks claimed a right to recover 5*l.*

The defendants did not now appear.

After waiting till the closing of the court, Mr. Ingham addressed the complainant, and stated that he should decide in his favour, as he found it was the custom to charge in the way mentioned; but Mr. Hiscocks was not to consider the decision final, for he (Mr. Ingham) was not certain of being right, and he was doubtful what meaning the Court above would put on the words "in case of a new building."

An order was then made upon the defendants for the payment of 5*l.* and 2*s.* costs.

* See Vol. XX., p. 872.

Books Received.

London: How the Great City Grew. By GEORGE ROSE EMERSON. London: Routledge, Warne, & Routledge. 1862.

THE greater part of this work appeared at intervals in the *Dispatch*, and Mr. Emerson has done well in adding to it and reproducing it as a compact little book. The history of London, as we have often had occasion to say, is full of interest; and those who have not made themselves acquainted with it by harder studies will find in this volume information pleasantly conveyed, that will give materials for thought and invest with interest every walk in the streets.

British Almanac and Companion, for 1863. London: Knight & Co., Fleet-street.

THE "Companion" in its thirty-sixth year is as various and instructive as ever. In "London in 1862" Mr. Charles Knight sets forth pretty fully the misconceptions of foreign writers who visited us during the Exhibition. Mr. John Plummer contributes a paper on "The Distress in Lancashire," with reference to its social and economic effects. Then there are papers on the products and industry of the British colonies, with reference to the International Exhibition; British Columbia; Logarithms for the Many; Fires and Fire Brigades (with the important reminder that the London water companies evade the law which requires fire-plugs and their mains "kept at all times charged at *high pressure*"); and last, but certainly not least, a judicious and interesting paper headed "Characteristics of the Present State of the Fine Arts in Europe, as shown in the International Exhibition of 1862" (though dealing only with one of the fine arts), by Mr. James Thorne. Speaking of the tendency towards the real and the true, he says, justly:—

"The only safe policy for the historical painter is to accept frankly the knowledge of his day, and treat his subject with the same conscientious regard to truth as the historian would treat it. But it should be clothed with poetry. Truth dealing with reality in the spirit of the historian, not of the antiquary, or the chronicler; of the analyst, not of the collector; of the poet, not of the commentator: accurate, exact, but not pedantically minute. And this verisimilitude would, if dealt with in manly simplicity, in no way shackle the imagination. Expression, colour, beauty, sentiment, emotion, are not dependent on these conventional vestments."

Mr. Thorne, speaking of some of our past landscape painters, asks "where, among our rising men, are those preparing or prepared to take their place?" The answer must be unsatisfactory: and applying the question as we would still further,—in the class of history and *genre* painting, we see little at present that is promising for the future of British art. What are our young men about?

The usual account of "Architecture and Public Improvements" is illustrated with small views of St. Stephen's, Spitalfields ("not on account of its beauty, but because, in its way, it illustrates the changes which are taking place in ecclesiastical architecture"); the Assize Courts, Manchester; the Jews' Hospital, Lower Norwood; the Kingsland Birkbeck Schools; and the National Provident Assurance Office, Gracechurch-street.

The New Forest: its History and its Scenery. By JOHN R. WISE. With Sixty-three illustrations, drawn by W. CRANE and engraved by W. J. LINTON. London: Smith, Elder, & Co., Cornhill. 1863.

HANDSOMELY bound, beautifully printed, and largely illustrated, this volume may be regarded as one of the very few gift-books published this season. It is in truth, however, more than a book for the season. Mr. Wise has brought to bear on his subject, learning, power of research, and good taste; and has produced what may be read with

vantage. An enthusiastic admirer of the beau- s of the forest,—"present at all times and ours, changeful in form, but the same in essence," he rightly calls on the Government to spare me of the finest trees, when felling timber, for e delight they will give to future generations. ie appendices include a glossary of some of the ovincialisms used in the New Forest (the first blished); a list of the flowering plants of the strict; and one also of the birds.

VARIORUM.

"Land Registry, 1862," edited by Mr. Jas. igg, and published by Waterlow & Sons, Parlia- ent-street, contains the statutes passed in 1862, uthorising the registration of estates with an defeasible title, and which ought to be known all purchasers. The object of the Act is to nder the dealing with land more simple and onomical than is now the case. The Act is rmissive only.——"Horse Warranty," by Peter owden (R. Hardwicke, Piccadilly), is described be "a plain and comprehensive guide to the irious points to be noted; showing which are sential and which are unimportant." It con- ins much information, in an accessible shape, at should be possessed by those who have horses. r. Howden makes one thing particularly clear— at there are very few horses which can stand a rict examination for the purpose of unqualified arranty; and yet, with a little attention to ractical detail, and the use of common sense, we ay obtain the tools for our work. As with men d women, perfection must not be expected: we ust balance qualities, not press too hardly on ie weak point; and, when we do find a good one, lake the most of it.——"The Churchman's amily Magazine" (Hogg & Sons, Fleet-street), intended to provide monthly, pleasant light eading for serious families. The first number, ow published, includes illustrations by Cope, illais, J. D. Watson, and others. The cover, by r. J. Leighton, is an amusing piece of eclecti- sm, involving in style the rustic, the Gothic, nd the Greek.——The January number of London Society" is the best yet issued.——

Miscellanea.

MR. PEABODY'S GIFT.—We understand that ie sum given by Mr. Peabody for the benefit of ie poor of London will be invested in more ways an one. Part will be expended in the erection f lodging-houses from the designs of Mr. Darbi- ire; for which a site has been obtained.

WESTMINSTER BRIDGE.—By a return issued ately it appears that the amount expended on Vestminster Bridge to the 14th of July last, was 93,189*l.*; of which 145,057*l.* were paid to con- ractors, and 248,132*l.* to other parties. The mount expended on the approaches was 109,054*l.* he whole of the expenditure has been supplied rom property belonging to the Westminster Bridge Commissioners and from votes of Parlia- ient.

ADULTERATION OF LINSEED OIL. — We learn rom "The Oil and Colourman," weekly trade ircular, that the subject of the adulteration of inseed oil, which was some time since brought fully under public notice in the *Builder*, is now ngaging the active attention of the trade; and hat a meeting of the principal merchants and thers interested in the seed trade has just been eld at the Baltic Coffee-house, with a view to rame regulations for the prevention of adulte- ation in linseed oil; when resolutions in accord- nce with this object were unanimously adopted, nd a committee appointed to promote the pur- ose in view.

PROPOSAL FOR A GRAND PUBLIC TELESCOPE.—Mr. William Distin, of Covent Garden, a corre- pondent, makes a promising suggestion in egard to future astronomical discoveries. He proposes that a joint-stock company (of course, n the limited liability principle) be got up for he purpose of constructing "a telescope of such nuge dimensions that in comparison with it even ord Rosse's would appear very small;" and con- idering that hitherto the larger the telescope the more extensive and wonderful the discoveries, here seems every hope that a still larger one than ord Rosse's would yield still better results. The ublic interest in such an instrument, which any ne would have the power to use for a small harge, would certainly be very great; and it is robable that an adequate return for the outlay night thus be realized. We hope some of our well-known astronomers will take an interest in he project.

"WEST SHANDON."—The architect of Mr. Napier's residence, on the Gareloch, published in our last,* was Mr. J. T. Rochead, of West George-street, Glasgow.

HENRY II. WARE.—The *Chronique des Arts* says:—"The problem of the origin of Henry II.'s earthenware has just been solved by M. Benjamin Fillon, an amateur of Poitiers. This mysterious pottery, which has been designated the 'Sphinx of Art,' was made at Ofron, near Thouars (Deux-Sèvres), with clay from Rigné. Two artists aided in the manufacture; the potter François Charpentier, and Jean Bernard, librarian and secretary of Hélène de Hangert-Genlis, widow of Artus Gouffier, a superior woman, who died in 1537."

TELEGRAPH ACROSS PERSIAN GULF.—A correspondent states that the Indian Council have decided on a submarine cable across the Persian Gulf, and that the whole management of the work is intrusted to one of their own officers, Colonel Stewart, R.E. The core will be gutta-percha, made at the Gutta-perch Company's Works, Wharf-road. It will be tested by Reid's process of pressure, equal to the depth of sea where the cable is to be laid. Mr. Henley, of North Woolwich, will make the iron sheathing, and the Government ships will submerge it. The whole will cost about 300,000*l.*

METROPOLITAN TOLLS.—On Wednesday, Dec. 24th, a deputation of five gentlemen, viz., Messrs. D. Nicoll, R. Yeo, R. Hackworth, Mosley, F.C.S., and the Curate of St. Mary's, Kilburn, waited upon Mr. G. T. Jenkins, barrister-at-law, of Avenue-road, St. John's Wood, to present that gentleman with a silver claret jug, subscribed for by a number of gentlemen and tradesmen principally residing in that locality, as a slight testimony of respect and admiration for that gentleman's spirited conduct in trying and successfully maintaining (after several failures by others) the right of the public to pass toll-free through the sidebars of the Swiss Cottage Gate, placed at the top of Belsize and Victoria Roads. Mr. D. Nicoll formally presented the testimonial in a few appropriate remarks.

COOKING FOR THE MILLION IN MANCHESTER. Among the schemes lately put into practice, are the working men's dining and coffee-rooms, in Nelson-street, Angel Meadow, where the Ducie Relief Committee offer the distressed operative a plentiful "ha'porth" of food; for he can procure a cup of good coffee, or a cup of tea, or plate of bread and butter for that sum; while for three halfpence he may have a bowl of broth or soup, a plate of potato hash, and a plate of potatoes. One penny will cover the cost of bread and cheese; while for twopence the poor fellow may enjoy the unwonted luxury of a plate of beef or bacon. This is an immense improvement on the "soup-kitchen" system, and should be introduced into Preston, Blackburn, and other towns. By such means as these the self-respect of the poor cotton-spinner may be preserved unimpaired. Let them pay a trifle, no matter how small the amount, and it takes away that appearance of almsgiving, towards which the Lancashire artisans, we see with gratification, evince such a decided repugnance.

CHELSEA VESTRY REPORT FOR 1861-2.—The usual Report of the Vestry of Chelsea Parish has been printed. It contains a minute and lengthened account of all the various subjects of parish and vestry interest, chiefly in the form of Appendices. The parish authorities have not overlooked the sanitary condition of the parish, and have taken proceedings for the removal of nuisances during the year in 78 cases affecting the state of houses, 208 the state of drains and closets, 126 water-supply, and so on; but none as regards ventilation, with which, unfortunately, parish authorities have not so much power to interfere as they ought to have, in regard to the internal economy of dwellings: they made an endeavour, however, to induce the London Apothecaries' Company to lower or open with railings the high and close wall of their botanic garden, so as to promote the ventilation of the locality, and hinted that they might open the garden as a promenade; but the Company refused to do either the one thing or the other. The Vestry might have urged the benefit of ventilation to the plants, if the Company cared nothing for its benefit to human beings. The churchwardens and overseers of the parish, we observe, have written a voluntary testimonial of thanks to Mr. C. Lahee, the vestry clerk, in a formal letter to the vestry, whom they congratulate on the possession of so valuable a servant.

* P. 928, Vol. XX.

THE EXHIBITION BUILDING.—The building has been formally handed over to the contractors, Messrs. Kelk & Lucas.

THE PNEUMATIC DESPATCH.—On 24th ult., the tube for the conveyance of letters, parcels, newspapers, and packages, on the pneumatic despatch principle, and which has been carried underground between the railway clearing-house of the London and North-Western Railway, in Seymour-street, Euston-square, and the North-Western District Post-office, in Eversholt-street, Hampstead-road, was completed. The engine-house is a brick building on the London and North-Western Railway Company's station. The engineers, Messrs. Rimmell & Clark, report to the directors that the tube will be ready for public traffic early in January.

DEMOLITION OF THE SOHO MANUFACTORY.—The celebrated Soho, at Birmingham, we learn, is to be destroyed, to make room for improvements in the neighbourhood. It was erected by Matthew Boulton in 1762-63-64. Here it was that Matthew Boulton gathered around him the talent, the skill, and ingenuity available in Europe. Here Watt brought his steam-engine to perfection. Here Rennie studied and worked, and also Flaxman and Wyon. Soho is also associated with many other well-known names, such as Eginton, the glass-stainer; Murdoch, the inventor of the first locomotive steam-engine, and the discoverer of gas-light; as also Priestley, Franklin, Small, Black, Edgworth, Darwin, Johnson, and others of "the Lunar Society."

INSURANCE OF WORKMEN'S TOOLS.—Sir: I agree with your suggestion that all employers should insure their workmen's tools, as the men cannot easily do it for themselves. I have done so for several years past without letting my men know it, in case some evil-disposed workman might be careless, or, perhaps, worse, in order to make a claim beyond the value of his tools. All carpenters' shops should be lighted with gas where possible, and no wood fires allowed for heating the glue-pot. A notice should also be put up that any man found smoking in the carpenter's shop should be liable to instant dismissal. With these regulations there would not be greater risk with builders' shops than with others where combustible materials are stored.—A BUILDER.

SHORTEN THE BACK LEGS OF YOUR CHAIR.—I will tell you a secret worth knowing. A thousand things not worth half as much have been patented and elevated into a business. It is this: If you cut off the back legs of your chairs, so that the back part of the seat shall be 2 inches lower than the front part, it will greatly relieve the fatigue of sitting, and keep your spine in better shape. The principal fatigue in sitting comes from your sliding forward, and thus straining the ligaments and muscles in the small of the back. The expedient I have advised will obviate this tendency; and, as I have suggested, add greatly to the comfort and healthfulness of the sitting posture. The front edge of a chair should not be more than 15 inches high for the average man, nor more than 14 inches for the average woman. The average chair is now 17 inches high, for all, which no amount of slanting in the seat can make comfortable.—*Lewis's Gymnasium.*

DISCOVERY OF MURAL PAINTINGS IN NORWICH CATHEDRAL.—In the course of erecting, in the south aisle of Norwich Cathedral, a series of mural tablets, the workmen have discovered in the three central arches of the arcade, beneath the window, some ancient mural paintings. According to a local paper, the easternmost one was the most perfect; and in the upper part, in capital letters, was distinctly to be read S C S. WLSTANVS. St. Wulstan, who was Bishop of Worcester (1062-1095), is represented receiving his pastoral staff from King Edward the Confessor. Of the king, however, very little remains but the head and shoulders. The painting in the next arch is very imperfect, and the name is illegible: the figure, which seems to be that of a female, and may represent St. Etheldreda, is represented kneeling, with joined hands, and arms extended, as if in supplication: there is a crozier at her side and a crown above her head. The third painting represents a bishop; for the outline of the mitre and remains of the pastoral staff can be distinctly traced. Here, also, unfortunately but a letter or two of the name remains. St. Wulstan was not canonised until 1203: these paintings, therefore (being all executed at the same period), cannot be earlier than the thirteenth century. Judging from the shape of the mitres, they belong to the fourteenth; but appear at some subsequent period to have been in part repainted, and were probably hidden from view at the Reformation. Drawings and tracings have been made.

THE THAMES TUNNEL.—During the week ending 27th of December, 27,297 passengers passed through the tunnel, paying in tolls, 113*l.* 14s. 9d.

QUEEN'S (WESTMINSTER) RIFLE VOLUNTEERS. On Friday evening, the 19th ultimo, the members and friends of the 10th company (Messrs. G. Trollope & Sons), or Second St. Margaret's, had their annual meeting at the Freemasons' Tavern. Nearly 200 *employés* of the firm sat down to supper. Captain Trollope was in the chair, supported by his partners, Captain and Adjutant Morris, Captain Rose, and many of his brother officers. By the permission of Earl Grosvenor, the band of the regiment attended, and an agreeable evening was spent.

ORIGIN OF PETROLEUM.—Dr. J. B. Edwards, in the *Pharmaceutical Journal*, remarks that the flow of oil from mineral springs is by no means new, either to science or commerce. Herodotus has recorded that the island of Zante furnished large quantities, while Pliny and Dioscorides describe the oil obtained from Agrigentum, a small town of Sicily. The Persian springs at Bakoum have yielded to the value of 600,000 dollars annually; and the earth oil from Rangoon, in Burmah, has been exported to the extent of 400,000 hogsheads yearly. The streets of Genoa and Amiens were formerly lighted by a petroleum obtained from Parma. In 1847 a spring was discovered in Yorkshire, which was successfully worked by Mr. James Young, of Glasgow, until exhausted, when he turned his attention to the distillation of coal, and discovered paraffine oil. The marvellous oil-springs of the New World, however, far surpass in extent and interest all previous discoveries; and the quantities already yielded, without apparently diminishing the supply, show that this will be a most important article of commerce for some years to come.

CHARRED TAN AS A DEODORIZER AND ABSORBENT OF NIGHT SOIL.—At the Maidstone Farmers' Club, Mr. H. Martin, secretary to the Central Cottage Improvement Society, has given some account of experiments of his with charred tan from tan-yards as an absorbent and deodorizer of night-soil. For use in rural cottages and other country residences, charred tan may be of service, at least where it is easily attainable; but the Rev. Mr. Moule's use of mere earth for such a purpose is certainly preferable, as being much cheaper and more practicable. Besides, charred tan is just charcoal; and no doubt the tan is not essential; and indeed charred peat, and other forms of charcoal, have been already used for the like purpose; but even charred peat has been found too costly; and as for tan, the supply must be very restricted, compared with the contemplated uses over all the country. Moreover, if charcoal, as is believed, destroys foul gases when used at a ventilator, it is likely to destroy the ammonia which Mr. Martin believes it only to absorb and retain; and an experiment at a gaswork is said to have shown that the odour expelled from his "black ash" was not that of ammonia at all.

THE NORTH STAFFORDSHIRE INFIRMARY QUESTION.—It having been found that, notwithstanding the erection of a new wing to the old building, the occurrence of mines beneath the site was undermining and dilapidating the hospital, and reducing it to a dangerous state, the governors proceeded to the consideration of what was to be done in the circumstances. It was at length resolved to purchase a new site for the hospital, and also to establish local dispensaries in aid of its objects. A site at the Mount was purchased, and some forty or fifty plans for a new hospital were also obtained. Such was the state of matters when an agitation against the removal of the hospital was got up in the Potteries, and meetings have recently been held on the subject. An endeavour has also been made to rescind the resolution come to by the governors and their committee, although a deposit of 300*l.* has been paid towards the purchase money of the site, and a very stormy meeting of the governors has been held with that view; but nothing definite was effected. In the course of the confused discussion which took place, some of the governors insisted that the present hospital was quite safe, and one (Mr. Peake) offered to bind it up effectually with iron rods; but another (Mr. Garner) stated that he thought the chief objection to the infirmary was not its instability, but the deficient supply of air and ventilation. There were only 670 cubic feet of air for each patient, whereas the smallest proper quantity was 1,500, and very often 2,000 were provided. Mr. Garner then entered into details for the purpose of showing the disastrous effects which had in former years attended the crowding of the hospital. The meeting broke up in great confusion without undoing anything that had been done.

THE ROYAL ACADEMY.—The silver medals in connexion with the Royal Academy for the present year have just been awarded to Mr. Henry Thomas, for the best drawing from life; to Mr. Francis Holt, for the best drawing from the antique; to Mr. Thomas Webb, for the best perspective drawing; and to Mr. George Hall, for a specimen of shadow drawing.

SANITARY CONDITION OF GRANTHAM.—Fever has been very prevalent in Middlemore-yard, there having been as many as fifteen cases in that locality, which contains only thirty-two small tenements. The road runs from Castlegate to the river, and is mostly in a very wet and dirty state; and some gentlemen, it is said, are exerting themselves with the object of having it drained and improved.

ELECTRO-TELEGRAPHIC PROGRESS.—The Syrian telegraph is now open as far as Ourfa, at the top of the Desert, beyond the Euphrates. A branch line extends from Diarbekir to that point, and will be carried on thence in a few weeks to Aleppo, whence communication will be established with Damascus and Beyrout. From the latter station a line will run down the coast connecting Latakia, Tripoli, and Alexandretta. Another line will run north to Karffa, Jaffa, and Jerusalem.

DIAMONDS USED FOR BORING INTO HARD ROCK. An instrument for this purpose is now being employed in France, made out of a tube furnished with a circular cutter of rough diamonds. It is caused to revolve, and as it enters into the stone the cutter scoops out a cylinder, which is afterwards easily taken out of the tube. Holes in hard granite for blasting purposes, 47 millimètres in diameter, and from 1·10 mètres to 1·20 mètres deep, are thereby bored in one hour.

SANITARY IMPROVEMENT OF DUNDEE.—A subcommittee of the Sanitary Committee of Police at Dundee recommend that the whole streets of the burgh be paved by the commissioners, or by owners of property, as required by the Police Act;—that, with scarcely an exception, the existing public conveniences be removed, and new ones be constructed on sound sanitary principles, and that there be a large addition to their number;—that ash-bins of an improved description, furnished with patent stoppers be extensively distributed through the closes and lanes of the town, and the present ash-bins repaired or removed;—that the closes, lanes, and courts of the town be daily scoured with water;—and that, as respects Lochee, the streets be paved or otherwise made good.

ENGLISH IRONWORKERS FOR RUSSIA.—Within the last two months a number of men have left the Dowlais and Rhymney Ironworks for Russia. A gentleman connected with the Government of that country came over and selected some of the best workmen connected with these works, and the wages agreed to be paid to them were from 12*l.* to 20*l.* per month, being double and treble the money they earned in Wales. It appears that large ironworks are about to be started in Russia; and, as metallurgy and iron-making are comparatively unknown, the far-seeing Muscovites no doubt thought it would be well to have some practical men from this country. One of the party is expected to return shortly, it having been determined to secure the services of a few Welsh colliers as well.

LIVERPOOL ART UNION.—At the annual meeting of the subscribers to this art-union, Mr. W. G. Herdman, the secretary, entered into an explanation of the circumstances which had led to a decrease in the sale of tickets in various parts of the kingdom, and, complaining of the misrepresentations made by some speculative art-unions established for the purpose of profit, urged that the members should memorialise the Home Secretary to interfere in the regulation of some of the art-unions, which, it was alleged, were putting forth misstatements as to the advantages which they conferred, with a view to deceive the public and increase their business. Mr. Ewbank, as an artist, condemned as disgraceful the conduct of some of the newly-formed art-unions in perverting the patronage afforded to the encouragement of art by Government to private purposes of gain. In giving a greater premium to their agents than other art-unions, such new schemes were guilty of robbery upon the public, by beating down the artist in the purchase of his paintings, and then palming them upon the prize-holders at their original price in the catalogue, such unions were chargeable with robbing the artists and the public also. The report stated that the income of the society during the year had been 1,060*l.*, and the expenses 245*l.* 7s. 10d.; leaving a balance of 815*l.* to be spent in pictures.

CHATHAM.—The Government authorities have entered into a second contract with Mr. K. Spicer of Strood, for the erection of the second portion of the Commissariat Establishment, Chatham, including officers' quarters, barrack-rooms, quarters for superintendent and non-commissioned officers, cook-house, bakery, brewery, stables, cart-sheds, road-making, &c.——The Roman Catholic chapel is progressing. It stands on an area of 100 feet by 50 feet. The inside of the church is divided into nave and side aisles. The architect is Mr. H. Clutton, London.

THE FEN DRAINAGE.—The wind and tide on Sunday last made a complete wreck of Mr. Page's dam at the entrance of the Norfolk Marshland Smeeth and Fen drain. The dam has now been in course of construction since October, and about 3,000*l.* have been expended upon it. At a meeting of the committee of the district at Lynn, on Tuesday, it was resolved to rescind the appointment of Mr. Page, as engineer, and the dam and bank have been entrusted to Mr. W. D. Harding, C.E., of Lynn, with whom a committee has been appointed to co-operate.

TENDERS.

For re-building 47, Parliament-street, 1 and 2, Derby-street, S.W., for Messrs. Watson & Overend. Mr. H. R. Abraham, architect. Quantities by Mr. E. W. Crocher and Mr. A. T. Abraham:—

	Portland Stone.	Lisbury Stone.
Cubitt	£18,999	£18,810
Lucas, Brothers	18,830	18,3 0
Trollope	18,389	17,842
Piper & Wheeler	18,490	17,990
Flint	18,173	—
Ashby	17,400	16,900
Holland & Hannen	16,849	16,300
Myers & Son	16,751	16,055

For rebuilding the Coppice Shiplake, near Henley-on-Thames, for Sir R. Phillimore, Queen's Advocate. Mr. Henry Clutton, architect. Quantities by Mr. E. W. Crocher:—

Macey	£3,833	0	0
Myers & Sons	3,391	0	0
Anson	3 380	0	0
Piper & Wheeler	3,191	0	0
Foster	3,180	0	0

For house, John-street, for Mr. C. S. Butler, M.P. Mr. Reddell, architect:—

Piper & Wheeler	£835	0	0
Amos	830	0	0
Livermore	819	0	0
Ashby & Sons	810	0	0
Heath	794	0	0
Scott	794	0	0
Pritchard & Son	785	0	0
Macers	720	0	0

For rebuilding No. 26, Widegate-street, Bishopsgate. Mr. James Harrison, architect. Quantities supplied by Mr. A. W. Q. Nicholl:—

Richardson	£847	0	0
Patman & Fotheringham	779	0	0

VENTILATION—PURE AIR.

Sheringham's Day and Night Ventilator

for the admission of Pure Air

THROUGH THE EXTERNAL WALL

With single pulley, from 6s each, with leading pulley, from 6s 6d. These Ventilators are arranged so that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is found requisite. HAYWARD, BROTHERS, sole Manufacturers, 187 and 188 (late 117 and 118), Union street, Borough, London; and of all respectable Ironmongers, Builders, &c.

TO CHURCHWARDENS, MILL PROPRIETORS, and OTHERS GEORGE FRITH, BUILDER, &c. Coventry, begs respectfully to call the attention of the above parties to his method of REPAIRING CHURCH SPIRES, CHIMNEY-SHAFTS, and other elevated structures, without the expense of building a scaffolding. Church spires taken down and rebuilt, painted, repaired, &c Chimney-shafts repaired, pointed, and new caps fixed. New vanes and all kinds of lightning conductors applied. Estimates given References to architects, engineers, &c. Circulars detailing the principle and containing testimonials sent free on application as above.

MARBLE AND STONE WORKS,

WALTON STREET, BROMPTON, S.W.

G. MITCHELL begs to inform ARCHITECTS, BUILDERS, &c. that he has the LARGEST and BEST-SELECTED STOCK of MARBLE CHIMNEYPIECES in LONDON, of which Books of Drawings and Catalogues can be had on application, post free. Specimens to be seen at the SOUTH KENSINGTON MUSEUM, at the INTERNATIONAL EXHIBITION, 1862. Class 10 C; and at the ARCHITECTURAL EXHIBITION, Conduit-street, Regent-street. ESTIMATES WILL MEET WITH PROMPT ATTENTION.

HUBBUCK'S PATENT WHITE ZINC PAINT.

BY their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London atmosphere.

ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Barytes from ten to thirty per cent. Whether sold under the name of "Improved Zinc Paint," or as the number Two or Three qualities, no workman can produce good work with such material. Workmen who have once used the Patent Zinc Paint will never willingly use any other Paint for their best work.

CHEAPNESS.—Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.

EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK & SON,

THE LIZARD SERPENTINE

COMPANY, LIMITED.

Works—CARLEON COVE, LIZARD, CORNWALL.
Offices—24, ST. JAMES'S-STREET, LONDON, S.W.

The works having been suspended for a considerable time in consequence of the death of the late proprietor, the Lizard Serpentine Company desire to inform Architects, Builders, and the public generally, that having entirely rebuilt the factory, and fitted it with the most improved machinery, they have now resumed operations, and will be happy to furnish estimates, and execute in the best manner any work intrusted to them.

Communications to be addressed to the SECRETARY, No. 24, St James's-street; or to Mr. THOMAS OAKDEN, 84, King-street, Manchester, who is sole agent for Liverpool and Manchester.

PORTLAND STONE and MARBLE

MACHINE SAWING MILLS.

SAWS of the best quality, of any length, width, or thickness, to order.

Manufactured by ELI RICHARDS, 35, New Park-street, Southwark.

The Trade supplied on terms as low as any house in the kingdom.

LITTLE CASTERTON FREESTONE.

Apply for prices, &c. to

OCTAVIUS N. SIMPSON, STAMFORD;

and see Specimens at the Office of

Messrs. PINDER SIMPSON & SONS, 29, Savile-row, London, and at the Museum of Practical Geology, Jermyn-street, W.

This stone (which is a perfect oolite), is raised in blocks of any portable size, and is about four feet thick in the bed. It will stand ANY WEATHER, is much used for water works, and for the building and restoration of churches. When used as ashlar work it is not necessary to place it bed-wise. It works freely with a tooth saw, and is wrought at a cheaper rate than any stone in the kingdom.

THE BRITISH and FOREIGN MARBLE

GALLERIES, Warwick House, 142 and 144, Regent-street; and 27, 28, and 29, Warwick-street, W.

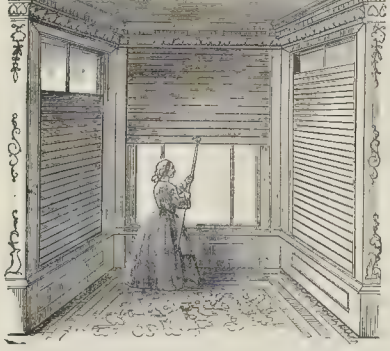
Information for using forwarded with lumps. Post-office orders or Cheques (London) promptly attended to. Estimates given for every kind of the above work.

REVOLVING SHUTTERS, TWO SHILLINGS PER FOOT.

BY HER MAJESTY'S ROYAL LETTERS PATENT.

CLARK & CO. PATENTEES,



And Manufacturers to the Honourable Board of Works,
15, GATE STREET, LINCOLN'S INN FIELDS, LONDON.
PRIZE MEDAL, INTERNATIONAL EXHIBITION, 1862.

CLARK'S Patent Self-Coiling Iron Shutters, 3/ per Foot.

CLARK'S Patent Self-Coiling Wood Shutters, 2/6 per Foot.

The utility of Revolving Shutters for closing Shop Fronts, Windows of Private Houses, Fireplaces, and every description of opening, is universally acknowledged; but the cost has hitherto prevented their general adoption. This objection Messrs. CLARK & CO. have met by introducing their PATENT SELF-COILING SHUTTERS, in Steel, Iron, and Wood, which, in addition to being less expensive than the ordinary shutters, have the advantage of being remarkably simple, and, consequently, not liable to get out of order. The Wood Shutters are constructed of laths of wood rebated together, having numerous mortises, through which pass a series of tempered steel bands, causing the Shutters to be Self-Coiling, and rendering them proof against Burglars.

CLARK'S PATENT SELF-COILING STEEL SHUTTERS, 3/6 per Foot.

The New Patent Revolving Safety Shutters are made of *Steel, in one sheet* (without either chain, links, rivets, or pins); the steel is corrugated transversely, which gives the appearance of laths, and enables them to be coiled into a small space. The corrugations render the Shutter exceedingly rigid, transversely and remarkably pliable, and self-coiling longitudinally. They are light, and can be pushed up and drawn down without the aid of machinery of any description. It is absolutely impossible for them to get out of order.

From the strength and hardness of the material of which they are composed, and being in *one sheet*, they cannot either be cut or broken through, as there is no opening or a lever or other instrument to be inserted as in the ordinary lath shutter, rendering them doubly secure, as any attempt to break through or open them will give an immediate alarm through the building. Their numerous advantages, coupled with the lowness of price, must insure their universal adoption, both in SHOP FRONTS and PRIVATE HOUSES.

These Shutters are Manufactured solely by the Patentees, Messrs. CLARK & CO. and are the only Revolving Shutters made that do not require machinery or gearing apparatus, while the cost is the same as the ordinary Lifting Shutters.

BRASS SASH BARS, STALL-BOARD PLATES, AND SUN BLINDS FOR SHOP FRONTS.

PROSPECTUSES AND WORKING DRAWINGS FORWARDED FREE ON APPLICATION.
Architects should be particular in describing the description of Shutter they require used.

15. GATE STREET, LINCOLN'S INN FIELDS.

BARTLETT, BROTHERS, & CO.

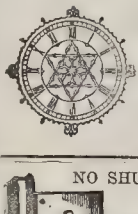
The PRIZE MEDAL for SUPERIOR PATENT SASH and BLIND LINES, was awarded to JAMES AUSTIN, at the INTERNATIONAL EXHIBITION, 1862.

AUSTIN'S IMPERIAL PATENT SASH and BLIND LINES
To BUILDERS, CARPENTERS, and BLIND MAKERS.
J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his
IMPERIAL PATENT FLAX SASH-LINES
of which he is now making four qualities, and he strongly recommends that in all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently cannot give so much satisfaction to the consumer
They can be obtained of all Ropemakers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country.
ESTABLISHED 1774

SASH WEIGHTS, 5s. per cwt. at Ashton Wharf, Blackwall, and at Hope Wharf, near the Church, Peckham-rye.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER, at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Foundry, Nails (wrought and cut), Copper, and Zinc; Patent Locks of all descriptions, China, Glass, and Wood Furniture, Bells of all kinds, with Patent shifting Spindles; Dr. Arnott's Ventilators, Sash and the New Registered Venetian Ventilator, so much admired, at 5s. 6d. each.
J. H. BOOBBYER (late STURCH & BOOBBYER), established nearly 40 years, for the supply of GOODS of the BEST MANUFACTURE, at the LOWEST PRICE.
14, Stanhope-street, Clare market, London.



TO ARCHITECTS, BUILDERS, and the PUBLIC Generally.—THOMAS WILLIAM COWAN begs to call their attention to Rae's Patent Self-cleansing DOMESTIC FILTER AND FILTER, which Dr. Letheby, Dr. Dundas Thompson, and most of the medical authorities, declare to be the only perfect water cistern at present in use. The improvement is applicable to old as well as new cisterns, which are made to any size and form, and of any material. T. W. Cowan keeps a large stock in hand, which may be seen at the Works. T. W. Cowan manufactures all kinds of Steam Engines, Boilers, Tanks, Girders, Iron Roofs, Patent Pipe Screwing Machines, Air Hammers, Hot air Apparatus, Brewing Apparatus, &c. &c.—KENT IRON WORKS, BRIDGE-STREET, GREENWICH, S.E.—Illustrated Priced Catalogues, post free, on application.

CHALK LIME BURNERS, AND GREYSTONE LIME MERCHANTS.
MANUFACTORIES AND WHARFS:—
3, CANAL ROAD, KINGSLAND ROAD, and FRINDSBURY, on the MEDWAY, KENT.

FREEN'S PATENT PORTLAND CEMENT, made at their Frindsbury Works, of unequalled Quality, Strength, and Colour, supplied to Shippers and the Trade, Wholesale and Retail.

F. & CO.'S IMPROVED ROMAN CEMENT and PLASTER of PARIS (coarse and fine), made at their Kingsland Works, and so universally known and approved of during the past half century, may be had (fresh ground daily) by Shippers and the Trade, Wholesale.

F. & CO.'S CHALK LIME, made at their Kingsland Works, of excellent quality and well burnt, may be had fresh from the Kilns as drawn daily.

GROUND GREY LIME for CONCRETE, ground by machinery, fresh as required, in any quantity.

GREYSTONE LIME.

PLASTERERS' HAIR. LATHS.

PLAIN PAN RIDGE and FOOT TILES.

CEMENT and TERRA-COTTA CHIMNEY POTS of every description and pattern.

KEENE'S and MARTIN'S CEMENTS.

SAND, POTTERY WARE, &c. &c.

Orders and Letters addressed to 3, Canal road, Kingsland; or to City Offices, 79, King William street, City, will receive immediate attention.

COLES, SHADBOLT, & CO.
CEMENT MANUFACTURERS,
LIME BURNERS,
BRICK MAKERS,
SLATE, TILE, DRAIN-PIPE, HAIR, LATH, and FIRE-GOODS MERCHANTS.
ST. JAMES'S and THORNHILL WHARFS,
CALEDONIAN ROAD, LONDON.

ROMAN CEMENT made at the above works daily, and had fresh from the kilns daily, a great advantage to dealers and sewer contractors, especially in winter time.

PORTLAND CEMENT, of the best quality, strength, and colour, manufactured in Kent. This cement will carry more sand than any of the cements so much of which is now brought into the market and sold as Portland.

PLASTER OF PARIS, both coarse and fine, of very superior quality and colour.

LIME. Grey Stone, Chalk, and Blue Lias Lime, well burnt, by the barge or yard, and may be had fresh ground daily, by steam power, for sale.

BRICKS from our fields in Kent, by the barge alongside, in the river Thames, or by cart from the above wharf, of good quality and moderate price.

A large Assortment of Glazed Stoneware Drain-pipes, Yorkshire Plain, Flat, and Paving Tiles, Hair, Laths, Chimney-pots, &c. always kept in stock.

BRICK FIELDS, LIME WORKS, CHALK, FLINT, AND BALLAST WHARFS,
FRINDSBURY, near ROCHESTER, KENT.

PLASTER OF PARIS.—The only London maker, the best and the oldest established (1830), is ROBESON, Mount Pleasant, Gray's Inn-road. The cheap country-made article is bought and sold by nearly all the dealers, agents, and pretending manufacturers, careless as to quality. Superfine and fine Plaster ground and dressed.

SOFT CHALK, of very Superior Quality will grind and wash with less than half the labour than any other known; free from grit or rubbish, at EPSOM LIME-KILN.—Two trains leave Kilns Epsom Station to all parts of the South-Western or the Brighton lines, within 15 miles at from 6s 6d. to 7s 6d. per ton, carriage free. References to persons using it. One trial will prove.—W. HORMAN, Ewell, Surrey.

GREY STONE LIME.
WILLIAM PETERS,
GREY STONE LIME BURNER,
WOULDHAM HALL GREY STONE LIME WORKS,
ON THE MEDWAY, NEAR ROCHESTER.
LONDON WHARFS:

Messrs. LARK, FLETCHER, & CO.
are prepared to supply the PORTLAND CEMENTS of the BEST QUALITY, and on ADVANTAGEOUS TERMS, either direct from the Manufactory, or from White Lion Wharf, Bankside, London.
N.B. Shipping Merchants' and Brokers' Orders promptly executed.

GREAVES'S BLUE LIAS LIME.
GREAVES & KIRSHAW, WARWICK, and
14, SOUTH WHARF, PADDINGTON, W.
L. M. TATHAM, Agent.
THE ONLY WHARF IN LONDON WHERE NO OTHER LIME THAN BLUE LIAS IS KEPT.
Delivered to any part of London, direct from the Works, by boat, rail, or cart, and to every part of the Kingdom, by canal or rail.

THE KEYNSHAM BLUE LIAS LIME and CEMENT COMPANY, Limited, are prepared to Supply their First-class Blue Lias Lime and Cement (manufactured by Captain Scott's patent process) in any quantity. Special Contracts made for large works.—All communications to be addressed to the Company, at their Offices, 2, Winchester buildings, Great Winchester-street, E.C.
N.B. A Prize Medal was awarded to Captain Scott, for his Cement, at the International Exhibition; and the Company received an "HONOURABLE MENTION" for the good quality of their Lime.

GLUE.—PRIZE MEDAL, 1862.

PROCKTER & BEVINGTON are compelled (in consequence of many imitations), to acquaint dealers and consumers, that they are the ORIGINAL and ONLY manufacturers of

IMPERIAL GLUE

who have obtained a Prize Medal.—Sold by all respectable ironmongers and oilmen.

Works: No. 124, Grange road, Bermondsey, London, S.E.

F. RANSOME'S NEW PATENT CONCRETE STONE,

Made without burning,

For which the Commissioners of the Exhibition of 1862 HAVE AWARDED THE PRIZE MEDAL, and which for SHARPNESS OF OUTLINE, BEAUTY OF APPEARANCE, DURABILITY, AND CHEAPNESS, stands unrivalled. Manufactured in BLOCKS of any dimensions, suitable for the construction of SEA WALLS, DOCKS, &c. as well as BUILDINGS generally. It surpasses every other material in its applicability to every description of ARCHITECTURAL EMBELLISHMENTS, CAPITALS FOR COLUMNS AND PILASTERS, CHIMNEYPIECES, TRUSSES, BALUSTRADES FOR TERRACES, GATE PIERS, CAPS, AND TERMINALS, Monumente, Tombs, and all kinds of Cemetery Requirements, &c. &c.

For prices, specimens, illustrations, and licenses, apply to Mr. FREDK. RANSOME, 30, Parliament street, Westminster, or Patent Stone Works, Ipswich.

TERRA COTTA and FINE STONEWARE POTTERY, warranted to stand Frost.

JOHN M. BLASHFIELD, STAMFORD POTTERY, STAMFORD, LINCOLNSHIRE, has greatly improved and continues the manufacture of TERRA COTTA and FINE STONEWARE for ARCHITECTURAL PURPOSES. He is able to make it of various new colours, so as to harmonize with Marble, Portland, and other Stones, and equal in hardness to Granite

A Medal at the International Exhibition was awarded, in Class 10, Section C, Architectural Objects, for "Perfection in manufacture and beauty of form." A Medal was also awarded for "Terra Cotta."

Moulded Bricks, String Courses, Copings, Cills, Tracery, Balusters, Capitals, Crosses, Jerusalem, Vases, Statues, Brackets, Consoles, Garden Edging, Guttering, six, nine, and twelve inch Paving Tiles, &c. &c.

Also Plain and Mosaic Pavements for Halls, Churches, Conservatories, &c. in all colours

DESIGNS AND ESTIMATES PREPARED.

MANUFACTORY, STOKE-UPON-TRENT.

BURHAM BRICK, LIME, and CEMENT COMPANY, BURHAM WHARF, BELVIDERE ROAD, LAMBETH.—The public are informed that the Company have taken the above Premises, and have ON SALE, GAULT BRICKS, TILES, POTTERY, DRAIN PIPES, GREY STONE LIME, PORTLAND and other CEMENTS, and BUILDING MATERIALS of all descriptions. Architects and Builders are respectfully informed that goods of any pattern or design can be manufactured at the Company's Works, erected on the banks of the Medway by the late Thomas Cubitt. They would also call the attention of the public to the very superior quality of their Portland Cement.

PRIZE MEDAL TO MAW & CO. INTERNATIONAL EXHIBITION, 1862

IMPERISHABLE TESSELATED PAVEMENTS, combining a highly decorative and economical substitute for ordinary floors of their perishable coverings. MAW & CO'S Pattern Book, designed by M. Digby Wyatt, esq., together with a special design and estimate of cost adapted to any given dimensions of hall, passage, conservatory, verandah, farm, &c. will be sent on application, at the Benthall Works, Broseley, Salop.

May be seen at the Exhibition of Building Inventions, &c now open at the Galleries of the Architectural Exhibition, 9, Conduit-street, free.

London Agents—W. B. SIMPSON & SONS, 456, West Strand, who have on view a great variety of Specimens of the Pavements.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for these WORKS is REMOVED to No. 21 Wharf, Macclesfield street North, City-road Basin, N. 2ndly, that the trade term, "TERRO METALLIC," is the exclusive right of the Proprietor; and 3rdly, that the "Reports of the Jurors," page 781, of the Great Exhibition, note the grant of a First-class Medal and rank the Manufactory known as long as "The Tile-ary," Tunstall, Staffordshire, as the first of the kind in the world.

BRYCESON'S ORGAN FACTORY, BROOK STREET, EUSTON ROAD, LONDON, N.W. Established 1796.—Apply for PRICED CATALOGUE of St. Cecilia, Sendamore, and other Organs usually in Stock. Also for the Tuning, &c. of Organs in all parts of the country. Church Organs of any size built, enlarged, or removed, as well as removed and WAREHOUSED DURING RESTORATIONS. PRIZE MEDAL, 1851

PATENT ASPHALTIC ROOFING FELT. D. ANDERSON & SON, BELFAST.

INTERNATIONAL EXHIBITION, 1862.

CLASS 35, NO. 6849.

The only Medal "for Stone Ware" has been awarded to

DOULTON & WATTS, LAMBETH POTTERY,

LONDON.

In expectation of a greatly increased sale, D. & W. have determined to introduce the annexed pattern of their ENAMELLED STONEWARE CLOSET PANS, at the price of the commonest description of earthenware

Experience has shown that this shape is the most simple and efficient, and that in strength, durability, and cleanliness it cannot be surpassed by the most expensive closets.

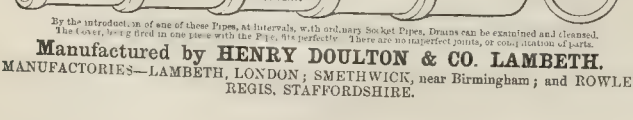
FIGURE D STONEWARE CLOSET PAN AND TRAP, 3s. 9d. COMPLETE.

The only PERFECT, SIMPLE, and really EFFECTIVE INVENTION by which Drains can be MINUTELY EXAMINED AT ANY TIME obstructions removed, and CAP-JUNCTIONS of any size inserted on the event of further connections being required without breaking pipe, ordered during the flow clearance

They require no more labour in the laying down, and are supplied at the same price as the ordinary Socket Pipes.

SALT GLAZED STONEWARE SOCKET DRAIN PIPES, INVERT BLOCKS, &c.

Every Article required for DRAINAGE and SANITARY PURPOSES supplied on the lowest terms direct from the BOURNE VALLEY WHARF, NINE ELMS, S.; or from the WORKS, near POOLE, DORSET.



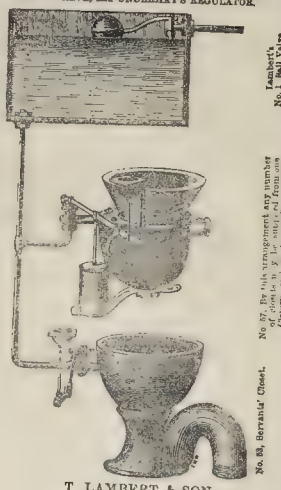
Illustrated Lists with full Particulars and Prices may be obtained of

WILLIAM STANDING, BOURNE VALLEY WHARF, NINE ELMS, LONDON, S.

A GOOD DRAWING-DOCK AND LANDING WHARF.

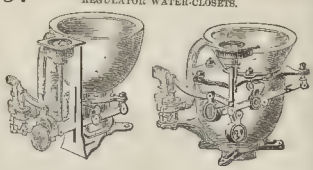
*** Specimens of CREEKE'S PATENT PIPES may be seen at the Architectural Exhibition, 2, Conduit-street, Regent-street, W

DOULTON'S PATENT OPERCULAR PIPES.



By the introduction of one of these Pipes, at intervals, with ordinary Socket Pipes, Drains can be examined and cleansed. The Cover, being fired in one piece with the Pipe, fits perfectly. There are no imperfect joints, or complication of parts.

Manufactured by HENRY DOULTON & CO. LAMBETH.



MANUFACTORIES—LAMBETH, LONDON; SMETHWICK, near Birmingham; and ROWLEY REGIS, STAFFORDSHIRE.

PAN CLOSET fitted with LAMBERT'S VALVE, and UNDERHAY'S REGULATOR.

T. LAMBERT & SON,
FOUNDERS, HYDRAULIC AND GAS ENGINEERS,
SHORT STREET, LAMBETH.

J. TYLOR & SONS' PATENT REGULATOR WATER-CLOSETS.

Valve. Pan.

The Regulator Valve gives perfect control over the supply of water to each closet, so that, however small the fall of water, perfect flushing is obtained. Any number can be worked by one supply pipe. No cisterns, valves, cranks, or wires required. The Closets can be seen in action at the Manufactory, and Illustrated Catalogues had on application to the Manufacturers, J. TYLOR & SONS, Warwick-lane, Newgate street, London.

UNDERHAY'S PATENT REGULATOR CLOSETS for constant or intermittent supply, dispensing with Cisterns, Service Boxes, Valves, Levers, Cranks, &c. &c. Much time is saved in fixing, and a better flush of water obtained in use

Pan, Valve, Self-acting, and Servants' Closets on this principle, may be seen at the Works. They are very cheap, their efficiency guaranteed, several of them have been sold, and no instance of failure has occurred

TO ARCHITECTS, BUILDERS, PLUMBERS, &c.

In consequence of the BANKRUPTCY of the late firm of C. BOTTEN & SON,

F. G. UNDERHAY

now prepared to execute HIS OWN ACCOUNT the Original Regulator Water Closets, Valves, Gas Meters, &c. on the same premises

CRAWFORD PASSAGE, CLERKENWELL, LONDON, E.C.

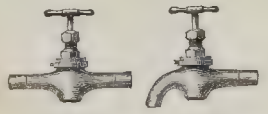
WARNERS'

Baths can be had of either Copper, Zinc, or Galvanized Iron. Prices from 27 Jos. each. J. W. & SONS also supply all Fittings requisite for the same.

TWO PRIZE MEDALS FOR BELLS HAVE BEEN AWARDED TO JOHN WARNER and SONS,

AT THE GREAT EXHIBITIONS IN 1851 AND 1862.



Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast of any size, note, or weight, singly or in Peals.

TUNED BY MACHINERY.

Old Bells recast or taken in Exchange.

An experienced Bell hanger sent to inspect, report, and advise on the state of Peals out of repair. Estimates furnished for New Oak Frames and Fittings, and for Repairing Old Ones

House Bells, Hand Bells, Alarm Bells, Ships' Bells, Horse, Cattle, and Sheep Bells.

No. 384. No. 383.

WARNERS' HIGH-PRESSURE COCKS

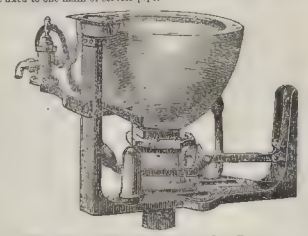
are made with Gland Stuffing boxes and Loose Valves. They can always be made sound after wear, and releathered with facility.

All Warners' Cocks are tested with 80 lbs. Pressure.

Improved Ball Screw-down Cocks, suitable for either Steam or Water, are recommended to the notice of Water Companies as an efficient substitute for the ordinary Sluice Cock.

JOHN WARNER & SONS

HAVE BEEN AWARDED A PRIZE MEDAL FOR THEIR NEW



CHIMING APPARATUS,

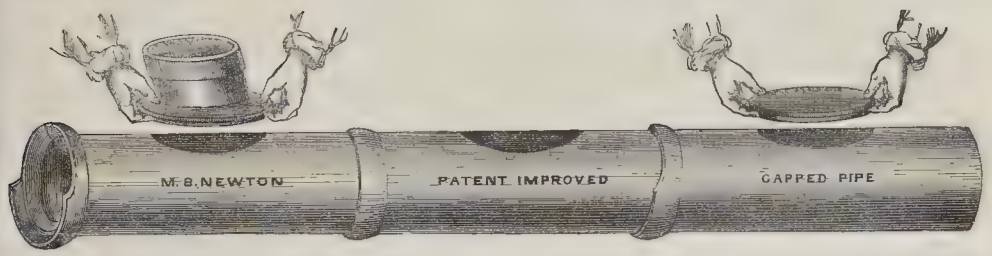
by means of which a lad may correctly play a great variety of chimes upon peals of six, eight, or more bells. Several have since been fixed, and give great satisfaction

Prices and further particulars furnished on application at the Manufactory, 8, Crescent, Cripplegate, London.

JOHN WARNER & SONS desire to draw attention to their PATENT PAN and VALVE CLOSETS, with Supply and Regulating Valve for High or Low Pressure.

The PATENT VALVE is connected with a Bracket, which may be attached either to a Pan or Valve Closet, as desired. The Valve being constructed to close gradually after the handle is down, gives a sufficient supply of water to cleanse the basin, and leaves enough in the pan to ensure an air-tight joint. Any number of these closets may be fixed to one main or service-pipe.

No. 1458.—Warners' Spring Valve Closet on Iron Frame, with Vulcanized India Rubber Valve, and Patent Supply Valve attached, Plain Handle, and White Basin £3 15 0
Sunk Handle, extra 0 3 0
Blue Basin, extra 0 1 6



No. 1484.—Warners' Bright Pan Closet, with Patent Supply and Regulating Valve attached, Plain Handle, and White Basin £2 0 0
Sunk Handle, extra 0 2 0
Blue Basin, extra 0 1 0

The above prices are subject to a liberal discount.

THE ABOVE ARE WHOLESALE PRICES, SUBJECT TO DISCOUNT.

JOHN WARNER & SONS, 8, CRESCENT, CRIPPLEGATE, LONDON, E.C.

The ABOVE INVENTION WILL RECOMMEND ITSELF to Architects, Engineers, and others interested in Drainage, for its SIMPLICITY of construction; there being NO COMPLICATION OF PARTS.

The "Manhole" is sufficiently large to admit of the DRAIN being THOROUGHLY CLEANSED WITHOUT A SINGLE PIPE BEING REMOVED.

It DOES NOT at all INTERFERE WITH THE FLOW OF WATER in the Drain.

It IN NOWISE WEAKENS THE PIPE; and

It ADMITS of the ready INSERTION OF A JUNCTION by removing the "Manhole" cover, and replacing it with a loose Junction Arm.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter FROM SIR RAYMOND JARVIS, Bart VENTNOR, ISLE of WIGHT.—Second Testimonial.—"March 10th, 1852.—In reply to your letter received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state with much satisfaction, it answers perfectly. Many builders and other persons have lately examined it, and there is not the least appearance of difference since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."

N.B. From this testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

HANWELL GREEN, MIDDLESEX.—Valuable Freehold Land, Dwelling-houses thereon, at present producing 112l. per annum, capable of great improvement.

MR. FRED. GODWIN will SELL by AUCTION, at the MART, on THURSDAY, JANUARY 8th, 1863, at ONE o'clock, in one lot, under a power of sale and after recovery in regulement, a valuable investment; comprising a large PLOT of LAND, and FIFTEEN BUILDINGS and SHOPS thereon all well tenanted, producing 112l. per annum. The property has two frontages, shops on the high Road, and is close to the passenger station of the Great Western Railway; and parties who look out for a sale may be had fourteen days prior to the sale, of Mr. T. F. CREW, 7, Staple-inn, Solicitor, Holborn, Solicitor; at the principal Inns at Ealing, Hanwell, and Uxbridge; of Mr. SQUIRES, Auctioneer, Hanwell; of Mr. BATTEY, Builder, Boston-lane, Hanwell; at the Mart; and at Mr. GODWIN'S Offices, 3, Hatkin terrace, Belgrave-square, S.W.

WOODFORD RAILWAY.—The GROVE, WANSTEAD.—Portions of this beautiful Estate are now TO BE LET for Building purposes, and Villa Residences are much required in the locality. Soil gravel, situation healthy, and water excellent. The Snaresbrook Station is 400 yards only from the Estate, and the City is reached in twenty-five minutes. The Leases will contain such restrictive clauses as may be deemed necessary to secure a specified time. LAND also TO LET at Blackheath, Tottenham, Kingston; some very eligible SITES in the Grove-road, Mile-end, a few of which are already let to shops, and large and very CHEAP PLOTS TO LET, at Ealing.—Apply to Mr. KNIGHTLEY, Architect, 25, Cannon-street.

PHILBROKE ESTATE, at Leytonstone, on the Woodford and Loughton Railway, twenty minutes from Broad-street and Bishopsgate Stations.—This valuable FREEHOLD ESTATE, in the most rising part of the Station, healthy and picturesque locality, gravelly soil, excellent drainage, water and gas in the roads, is now offered for building on the estate, it is proposed TO LET in Plots suitable for building detached and semi-detached villas. Repeated applications have been made for houses in the neighbourhood.—For terms, apply to Mr. ATHEY, at the Surveyor's Office, Philbroke Estate, Leytonstone, Essex.

CRYSTAL PALACE (close to).—Valuable BUILDING SITES TO BE LET or SOLD, within a few minutes' walk of Sydenham Hill Station, forming a handsome roadway of considerable width. The supply of houses in the neighbourhood of so far made out to the demand, the position being undoubtedly one of the most favourable and convenient in the vicinity of both its healthy salubrity, picturesque scenery, proximity to the Crystal Palace and Park, facility of access to the City and West-end, will always insure to the locality a high rank in popular estimation, and remunerative rentals may consequently be relied on for any houses erected on the property, on the estate, on the setting back required for carriage entrances by a bold curve to the roadway.—Apply on the Estate, to Messrs. FOX & BOUSFIELD, Agents for the Estate, 31, Coleman-street, City

BUILDING LAND, well Timbered, with House, Stabling, &c. TO BE SOLD, at Acton, Middlesex. Upwards of 1,000 feet gravel soil, of extensive area sloping to south, double frontage; less than a quarter of a mile from a first-class railway station giving access to all parts of London. Good water supply and drainage.—May be viewed, and the owner's address obtained on the property, Grove House, Acton, Middlesex.

TO BUILDERS.

BUILDING GROUND TO BE LET, on Lease, ninety years, situate in the improving neighbourhood of Pancras-road (close to the Great Northern Hotel), where there is a great demand for shops and private dwellings. A most eligible frontage for eight or ten shops, and adjoining land for thirty or forty fourth-class houses. Sewers and roads nearly complete on the whole estate.—Apply to JOHN POOLE, Wheel Works, Pancras road, King's Cross.

FREEHOLD SITES FOR BUILDING, and FREEHOLD HOUSES, can be obtained in the best part of Prince Albert's-road, near Kensington Gore, in front of the Royal Horticultural Gardens.—Apply to C. J. RICHARDSON, Architect, 17, Prince Albert's-road, N.W.

BUILDING LAND TO BE LET.—HACKNEY, close to the Railway Station, for fourth-class Dwelling-houses

NORWOOD, on Merton Hill, for Shops and Dwelling houses.

PERRY HILL, Sydenham, for Shops.

Advances if required, case if required.

Apply to Mr. F. K. GREEN, 25, College-hill, Cannon-street, E.C.

WANTED, on Lease or to Purchase, BUSINESS PREMISES in the vicinity of London, with a good Dwelling House and 1 Foreman's Cottage, to have a siding on station or navigable river; a good supply of water from main or well, with a few acres of ground for drying purposes, are indispensable.—Forward particulars and terms to D. F. BAXTER, Accountant, &c. 2, Guildhall chambers, Basinghall-street, E.C.

TO BUILDERS or CAPITALISTS.—To BE LET or SOLD, a valuable FREEHOLD BUILDING SITE, near London Bridge, having a frontage of upwards of 60 feet to the river, and an area of 10,500 superficial feet. A lease will be granted for a long term at a low ground-rent, or if purchased two-thirds of the purchase-money might remain on mortgage. Warehouse accommodation, with river frontage and great demand in the locality, and very large rentals would be obtained, with a comparatively small outlay. — For further particulars and cards to view, apply to Messrs. WILSON & SCOBLE, 141, Leadenhall-street, E.C.

TO BUILDERS and OTHERS.—TO BE SOLD or LET, on BUILDING LEASE, part of a very valuable FRONTAGE, to a high road in a favourite suburban district, where houses are in great demand, offering an unusual opportunity for a man of enterprise and small capital to safely and quickly realise a large and desirable profit.—Apply to H. PEACHEY, Esq. Surveyor, 1, Parliament. None but persons of good character will be dealt with, and to such liberal advances will be made.

TO BE SOLD, the LEASE of a BUILDER'S PREMISES, situate a few miles from London, containing large yard, workshops, sheds, steam-engine, saw-mills, and dwelling-house, close to a railway station—Apply, by letter only, to A. D. Office of "The Builder."

TO BRICKLAYERS, PLASTERERS, &c. TO BE DISPOSED OF, on reasonable terms, the Premises of the Proprietor taking a larger business, consisting of ONE SHOP, in the showline, 2 cellars in the Lobby, and three in a station on the South Western Railway. Every convenience for entry, a good large trade. The house and premises are in good repair, and rent very moderate.—Apply to T. W. Printing office, Chobham, Surrey.

TO BUILDERS.—TO BE DISPOSED OF, within a short distance of the City, an Old-established BUILDER'S BUSINESS, having a good yard and connexion. There is an unexpired term of many years, and the premises are well adapted for doing a large business. For further particulars, apply by letter to O. Office of "The Builder."

PATENT GRAINING APPARATUS.—TO HOUSE PAINTERS, GRAINERS, BUILDERS, RAILWAY COMPANIES, SHIP BUILDERS, &c.

One of the greatest improvements of the age is KERSHAW'S PATENT GRAINING APPARATUS, for producing an imitation of the various woods. They are very extensively used, and with great success. They never get out of order, and will repair the cost of them in two days' work. They only require to be tried, and any person studying his interest will not be without them. A prospectus will be sent upon the receipt of a stamped directed envelope addressed to T. KERSHAW, Patent Graining Tool Manufacturer, 33, High-street, Marylebone, London, W.

N.B. Sole of the Patent Graining Tools will be forwarded upon the receipt of a Post office order for 22s.

T. KENT'S PAINTING-BRUSH MANUFACTORY

Is conducted by his successors,

CROWDEN & GARROD,

Agents for Kershaw's Graining Machines.

MONEY.—IMMEDIATE CASH ADVANCES MADE ON FREEHOLD, LEASEHOLD, and COPYHOLD PROPERTY TIMBER, WINE, and SPIRIT WARRANTS. BANKRUPTS' and INSOLVENTS' CASES CONDUCTED. Bahn ces and Prospectuses Examined, Partnerships Conve Mr. RICHARD CROSSLEY, ACCOUNTANT and BUSINESS AGENT. 17, Moorgate-street, Bank, London.

MONEY on FREEHOLD and LEASEHOLD PROPERTY, by the MUTUAL LOAN FUND ASSOCIATION (Incorporated by Act of Parliament), 25, CASSELL STREET, Covent Garden, W.C. Advances from 10l. to 1,000l. upon Freehold and Leasehold Property for any term up to ten years. Mortgages redeemable on the advance can be paid off by easy instalments. Facilities afforded to tenants to purchase the houses they occupy, and of the reversion of the whole taken as rent. Greater advantages are offered to borrowers than in building societies, there being no shares from the loan. No preliminary fees. Prospectus and forms of proposal sent on receipt of a stamped directed wrapper.

EDWARD HARPER, Secretary.

AN ELIGIBLE INVESTMENT. — A Young Man, whose time is wholly occupied otherwise, is desirous of DISPOSING of a valuable INVENTION, which he has recently patented, but has not yet introduced. It will be found both profitable and permanent, and certain to be successful, more especially as it meets many manufacturers. The process is simple, and the workmanship easily managed. This is entirely a bona fide transaction, therefore the advertiser would decline any correspondence with parties who have not a moderate capital to invest, the advertiser would afford every facility, and the whole matter explained. Apply, by letter only, to HENRY BURTON, 23, Arundel-street, Strand, W.C.

London:—Printed by CHARLES WYMAN, Printer, at the Printing-office of COX & WYMAN, Nos. 74 and 75, Great Queen-street, Lincoln's-inn-fields, in the Parish of St. Giles-in-the-fields; and published by the said CHARLES WYMAN, at the Office of "THE BUILDER," No 1, York street, in the Parish of St. Paul, Covent garden, both in the County of Middlesex.—Saturday, January 3, 1863.

BUILDERS' BALL will take place at WILLIS'S ROOMS, St. James's, FEBRUARY 12th, 1863.

JOSEPH BIRD, Hon. Sec

10, Hanover Cottages, Regent's Park.

ROYAL ACADEMY of ARTS.—SYDNEY SMIRKE, Esq. R.A. Professor of Architecture, will deliver his LECTURES on the Evenings of THURSDAY, the 8th, 15th, 22nd, and 29th of JANUARY, and the 5th of FEBRUARY. The Lectures will commence each evening at EIGHT o'clock precisely.

JOHN PRESCOTT KNIGHT, R.A. Secretary.

GEOLOGY.—KING'S COLLEGE, LONDON.—Professor TENNANT, F.G.S. will commence a COURSE of LECTURES on GEOLOGY, on FRIDAY MORNING, JANUARY 23rd, at NINE o'clock. The LECTURES will be continued on each succeeding Wednesday and Friday at the same hour. Fee £2 12s. 6d.

R. W. JELF, D.D. Principal.

SHEFFIELD SCHOOL of PRACTICAL SCIENCE and METALLURGY.

PRESIDENT.

His Grace the Duke of Devonshire, K.G., F.R.S., D.C.L. Chancellor of the University of Cambridge.

VICE-PRESIDENTS.

The Mayor of Sheffield, John Brown, esq.
The Master Cutler.
The Right Hon. Lord Wharncliffe.
Sir David Brewster, K.H., D.C.L., F.R.S.L. & E., M.R.I.A.
Sir Roderic Murchison, F.R.S. Director of the Royal School of Mines.
John Percy, esq., M.D., F.R.S. Professor of Metallurgy in the Royal School of Mines.
William Fairbairn, esq., C.E., F.R.S.
Robert Hunt, esq., F.R.S., F.S.S., Keeper of Mining Records.
Warrington W. Smyth, esq., M.A., F.R.S. Professor of Mining and Mineralogy in the Royal School of Mines.

DIRECTOR.

The Rev. G. B. Atkinson, M.A. Principal of the Collegiate School; late Fellow and Assistant Tutor of Trinity Hall, Cambridge.

PROFESSORS.

Chemistry, Metallurgy, and Geology—James Alleu, Ph.D., F.C.S. of the Universities of Giessen and Berlin.
Engineering and Mining—J. Thompson, C.E.
Mathematics, Natural Philosophy, and Applied Mechanics—Rev. G. B. Atkinson, M.A.

The Sheffield School of Practical Science and Metallurgy will afford a complete scientific and practical education to students who are designed to become civil, mechanical, or mining engineers, or manufacturers of any kind. Its object is thoroughly to discipline the students in the principles of those sciences upon which the operations of the engineer, metallurgist, or manufacturer depend.

The education will be given by means of systematic Courses of Lectures, by Catechetical Class Instruction, by Practical Teaching in the Laboratory and Drawing-room, and occasionally by Field Excursions.

The School of Practical Science and Metallurgy will be conducted in the Buildings of the Sheffield Collegiate School. The two Institutions, although both under the superintendence of the Rev. G. B. Atkinson, Principal of the Collegiate School, are, however, entirely distinct.

A detailed Prospectus, containing Syllabuses of all the Courses of Lectures, and all other information, arrangements for boarding, &c. may be obtained by application to the Director.

THE SCHOOL WILL OPEN IN THE FIRST WEEK IN FEBRUARY, 1863.

TO ARCHITECTS.—Mr. BURBIDGE, Artist and Architectural Colourist, has REMOVED his Studio to No. 28, CRAVEN-STREET, STRAND, W.C.

GALLERIES of the ARCHITECTURAL UNION COMPANY (Limited), 9, Conduit-street, Regent-street, NOW OPEN, FREE, from ELEVEN till DUSK, daily. The Autumn Exhibition of Building Materials, Patents, and Inventions, will CLOSE, FEBRUARY 28, and must then be cleared for the Architectural Exhibition.

JAMES EDMESTON, Hon. Sec.

ARCHITECTURAL PHOTOGRAPHIC ASSOCIATION. The Photographs for 1862 are now being distributed.—Apply to Mr. MOODY, 9, Conduit-street, Regent-street.

A General View of the Wells Cathedral; 10 Plates of the Third Tier of Sculptures; and a Descriptive Account extracted from Professor Cockerell's work.—Annual Subscription, One Guinea.

WILLIAM LIGHTLY, Hon. Sec.

WATER COLOUR PAINTERS' LANCASHIRE RELIEF FUND.—The EXHIBITION NOW OPEN (by the kind permission of Messrs. Day & Son), at the German Gallery, No. 168, New Bond-street, from TEN a.m. to NINE p.m. will CLOSE on SATURDAY, the 17th instant. Admission, 1s. Catalogue, 6d.

JAMES FAHEY, Hon. Sec.

Shares, One Guinea, in the allotment of the Paintings, may be obtained at the Gallery.

THE METROPOLITAN BUILDING ACT, 1855. Section 49.—The INSTITUTE of BRITISH ARCHITECTS hereby give notice, that an EXAMINATION of persons desirous of obtaining a Certificate of Competency to perform the duties of DISTRICT SURVEYOR will take place at the ROOMS of the INSTITUTE, No. 9, Conduit-street, Hanover-square, W. on THURSDAY, the 29th day of JANUARY, at TEN o'clock in the forenoon. Persons desirous to be examined must, on or before TUESDAY, the 20th day of JANUARY, send an Application, which must be accompanied by a statement, according to a form to be previously obtained at the Rooms of the Institute.

JOHN P. SEDDON, CHAS. FOR-TER HAYWARD, } Hon. Secretaries.

Conduit street, January 6, 1863.

COMPETITIONS.

TO ARCHITECTS.—WESLEYAN CHAPEL, VESTRIES, and SCHOOL-ROOMS, King-street, Plymouth.—The committee appointed to carry out the ERECTION of a NEW WESLEYAN CHAPEL and SCHOOL-ROOMS, in King-street, Plymouth, invite architects to send designs, with plans, specifications, and estimates, on or before MARCH 2nd, 1863, to Mr. JOHN HILL, Mill-lane, Plymouth. The designs which obtain premiums to become the property of the committee, who are not to be bound to adopt any of the competitors to carry out the works. In the event of the successful competitor being employed, the premium will merge into the commission. Two premiums will be given, one of 5/. and the other of 2/.—A ground plan and all necessary particulars for the guidance of architects, may be obtained on application to the Rev. J. LOUTIT, Saltash-street, Plymouth.

CONTRACTS.

CITY of LONDON, BARBERS' HALL. Important SITE for WAREHOUSES, or MANUFACTURING PREMISES, in the immediate vicinity of Wood-street, Cheapside.—The Committee of the Worshipful Company of Barbers, will meet at their Hall, on THURSDAY, the 29th day of JANUARY, 1863, to receive TENDERS, for letting on a building lease, for ninety-nine years, the extensive PREMISES, known as Barbers' Hall, situate in Monkwell-street, Wood street, comprising three houses, fronting Monkwell-street, Nos. 33, 34, and 35, part of the courtyard in the rear thereof, the passage leading thereto, and the greater portion of the Company's Hall, together with the kitchen, scullery, and outbuildings, having a frontage towards Monkwell-street of about 83 feet by an average depth of about 116 feet, and an extreme depth of about 135 feet.—Full particulars, with a plan of the property, elevation, and section of street front, also conditions of letting may be obtained, on application to the Clerk of the Company; to Mr. CHARLES JOHN SHOPPEE, the Company's Surveyor, No. 64, Doughty-street, W.C.; or to the Beadle at the Hall.—By order,

HENRY GROSE SMITH, Clerk.

4, Warnford-court, Throgmorton-street, E.C.

WAR DEPARTMENT CONTRACT.—NOTICE to BUILDERS.—TENDERS are required for the ERECTION of a LAUNDRY, near the Hospital at Albany Barracks, Parkhurst, Isle of Wight.

Parties desirous to Tender for this work must leave their names at the Office on Fuse for the 18th JANUARY, 1863, and pay the sum of half a guinea for the Bills of Quantity, which will be forwarded to them as soon as prepared by the Government Surveyor.

The Secretary of State does not bind himself to accept the lowest or any Tender.

Royal Engineer Office, Albany Barracks, Isle of Wight, January 7, 1863.

SOUTH-EASTERN RAILWAY.—To BRICKMAKERS, CONTRACTORS, and OTHERS.—The Directors of the South-Eastern Railway Company are prepared to CONTRACT with a competent party or parties for about FORTY MILLIONS of BRICKS, on their line of railway at River Head, near Seven Oaks, Kent. Specifications, plan of land upon which the bricks are to be made, with any other information, may be had on application at the Engineer's Office, London Bridge, on and after THURSDAY next, the 1st JANUARY, 1863.—By order,

S. SMILES, Secretary.

London Bridge Station, December 26th, 1862.

TO BUILDERS.—Parties desirous of TENDERING for all or any portion of the WORK required in the ERECTION of the NEW BRUNSWICK CHAPEL, North-street, Bury, Lancashire, may see the plans, specifications, and obtain quantities at my Office on and after THURSDAY, the 8th of JANUARY, 1863. Sealed Tenders, endorsed "Chapel Tender," to be sent in to SAMUEL SMITH, Esq., Treasurer, King street, Bury, on or before the 24th day of JANUARY, 1863. The Trustees do not bind themselves to accept the lowest or any Tender.

JOS. CHATTWOOD, Architect, &c.

6, Union-square, Bury, January 2nd, 1863.

CONTRACTS.

TO DUST CONTRACTORS, &c.—TENDERS are required for the REMOVAL of all DUST and RUBBISH from the MIDDLESEX HOUSE of CORRECTION, at Coldbath-fields, for One Year, from the 1st day of FEBRUARY next. Information as to quantity, times of removal, &c. to be obtained of the Governor, at the Prison, any week day, between ELEVEN and FOUR. Tenders, specifying the total charge for the year, to be sent to the Prison, addressed to the Visiting Justices, before TWELVE o'clock, on FRIDAY, the 16th instant; and the persons tendering to be in attendance there the same day at TWO. The Visiting Justices do not bind themselves to accept the lowest or any Tender.

JOHN S. SKAIFE, Clerk to the Visiting Justices.

3rd January, 1863.

BARNSLEY LOCAL BOARD of HEALTH.—Water-Works Department.—CONTRACT No. 2. To Contractors for Pipe-Laying.—The Local Board of Health of Barnsley, in the County of York, are desirous of receiving TENDERS for LAYING DOWN about 11 MILES in length of CAST IRON SOCKET PIPES and other CASTINGS. Specifications may be seen, and Forms of Tender may be had, on application to me, or to Mr. THOS. HAWKSLEY, C.E. 30, Great George-street, Westminster, S.W. on and after MONDAY, the 12th day of JANUARY instant; and Sealed Tenders must be delivered at my office, not later than MONDAY, the 2nd day of FEBRUARY next, endorsed "Tender for Pipe Laying." The Board do not bind themselves to accept the lowest or any Tender.—By order,

WM. H. PEACOCK, Clerk to the said Local Board.

Barnsley, 6th January, 1863.

TO BUILDERS, IRONFOUNDERS, and CONTRACTORS.—WELSHPOOL SMITHFIELD.—Parties disposed to TENDER for the FORMATION of a SMITHFIELD, for the Local Board for the district of Welshpool, may inspect the Plans, Specifications, and Conditions, at the Office of Mr ALFRED MERRDITH, Town-Clerk, Welshpool, and duplicates of the same at my Office, in Bridgnorth, on and after THURSDAY, the 1st day of JANUARY, 1863, until THURSDAY, the 22nd of JANUARY, 1863.

Tenders, sealed up and endorsed "Tenders for Smithfield," must be delivered at the Town Clerk, Welshpool, on or before THURSDAY, the 22nd day of JANUARY, 1863. The Local Boards do not bind themselves to accept the lowest or any other Tender

ROBERT GRIFFITHS, Architect.

Bridgnorth, December 26th, 1862.

CARDIGAN CORPORATION WATER-WORKS.—To EXCAVATORS, MASONS, and GENERAL CONTRACTORS.—The Waterworks Committee of the Cardigan Corporation are desirous to receive TENDERS for LAYING about 3,000 feet of Salt glazed Stoneware SOCKET PIPES, of 6 inch and 4 inch bore; also the CONSTRUCTION of Depositing and Service RESERVOIRS and Works connected therewith. Plans, sections, and specifications may be seen at the Office of the Mayor of Cardigan. In addition to the above, the Committee wish to receive Tenders for laying about 6,000 feet of 6-inch and 4 inch Cast-iron Socket Pipes and other Castings.—Further information may be obtained on application as above.

Cardigan, January 5th, 1863.

DORSET COUNTY LUNATIC ASYLUM. To ENGINEERS and OTHERS.—The Committee of Visitors of the Dorset Lunatic Asylum are desirous of receiving TENDERS for the EXECUTION of the various ENGINEERING WORKS and FITTINGS of the said ASYLUM, viz.:—Hot and cold water supply, steam engine for well and pumps, steam cooking, stoves, ranges, grates, fenders, wash house fittings, gas works, &c. &c. The drawings, specifications, and conditions may be inspected at Forston House, near Dorchester, on and after the 19th January instant. The works are to be done under the direction of the Committee and their Architect, Mr. H. E. KENDALL, Jun. 33, Brunswick-square, London. The Committee will not pledge themselves to accept the lowest or any Tender, and the contractor will be required to enter into a contract, and to give a bond with a sufficient security, to be approved of by the Committee, in the sum of £1,000 for the due performance of the contract. The Tenders to be sealed up, endorsed "Tender for the Engineering Works, Dorset Lunatic Asylum," and sent or delivered to Mr. JOHN BROWN, Dorchester, Clerk to the Visitors, on or before THURSDAY, the 29th instant.—By order of the Committee of Visitors,

JOHN BROWN, Clerk.

Dorchester, 6th January, 1863.

MID-WALES RAILWAY.—To RAILWAY SUB CONTRACTORS.—WORKS to LET.—EARTHWORKS, MASONRY, &c.—Messrs. JOHN WATSON & CO. of Westminster, London, are prepared to receive TENDERS for the EXECUTION of the WORKS on the South Division of the above Railway, extending from near Newbridge, in Radnorshire, to within five miles of Brecon, in Brecknockshire. Plans, sections, specifications, and forms of Tender will be ready for inspection on and after the 18th inst. at their Offices in Builth, and any other information relative thereto will be furnished by Mr. WILSON, Resident Agent. Parties tendering for greater or lesser portions of the work must forward them, sealed, and addressed "Messrs. JOHN WATSON & CO." at their Offices at Builth, and endorsed "Tender for Works," on or before the 26th inst.

Builth, January 10th, 1863

TO BUILDERS, CONTRACTORS, and OTHERS.—The British Land Company will receive TENDERS from parties desirous of CONTRACTING for the ERECTION of a BRICK SEWER, 66 feet in length, or thereabouts, in the Bow-road; and of a 12-inch Pipe Sewer, in British and Merchant Streets, 1,800 feet in length, or thereabouts, and other works connected therewith. Plans, sections, and specifications of the works may be inspected, and other particulars obtained, at the Office of the Company, 14, Moorgate-street, E.C. any day between the hours of TEN and FOUR o'clock. The Board does not bind itself to accept the lowest or any Tender, and the party whose Tender shall be accepted will be required to provide two approved sureties for the due performance of the work. The expense of the contract will be borne by the Board. Tenders to be delivered on or before THURSDAY, the 22nd instant, addressed W. E. WHITTINGHAM, Secretary.

[*For remainder of Contracts see next Page.*

CONTRACTS.

ENFIELD LOCAL BOARD of HEALTH.—Notice is hereby given, that the Enfield Local Board of Health will meet at their Office, at Enfield Town, on the 23rd day of JANUARY instant, at TEN o'clock in the forenoon, to receive TENDERS from persons desirous of CONTRACTING for PROVIDING and LAYING DRAIN-PIPES, and LAYING IRON WATER MAIN PIPES, at Enfield New Town. Plans and specification to be seen at the Office of the Enfield Local Board of Health. Tenders must be sent in on or before the 23rd JANUARY instant, sealed and endorsed, "Tenders for Pipe-drain," &c. addressed to the Enfield Local Board of Health. The Board do not bind themselves to accept the lowest or any Tender.—By order of the Board,

E. LETCHWORTH, Clerk.

Enfield, 2nd January, 1863.

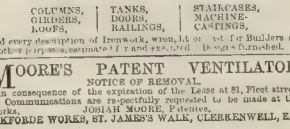
TO CONTRACTORS.—TENDERS are required for the OUTSIDE PLASTERING of EIGHTEEN HOUSES at Tottenham. Plans and specifications may be seen by applying to Mr. SWALES, 29, Myrtle street, Hoxton.

TO BUILDERS.—TENDERS are invited for the ERECTION of TWO VILLAS, at Clapton. The plans and specification may be seen at my Office, any day between the hours of TEN and FIVE. Tenders to be delivered on the 21st JANUARY, 1863. The lowest or any Tender will not necessarily be accepted.

CHESTER CHESTON, Jun. Architect.

Manor Offices, January 7th, 1863.

TO SEWER and ROAD CONTRACTORS.—Hornsey Park Estate.—TENDERS are required for the LAYING DOWN of about 7000 feet run of STONEWARE PIPE SEWERS, and other incidental works in connexion therewith; also for the CONSTRUCTION and FORMATION of 3000 feet run of road on the above estate. Specifications, plans, and sections, may be seen at the Office of Mr. JAMES LOVEGROVE, Surveyor, Finsbury Lodge, Dalston-rise, Hackney, N.E. on MONDAY and TUESDAY next, between the hours of ELEVEN a.m. and THREE p.m. The lowest, or any Tender, not necessarily accepted. Tenders to be sent in on or before the 22nd inst. endorsed "Tenders for Roads and Sewers," and addressed as above.



January 5th, 1863.

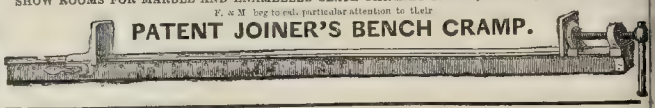
THE PATENT AMERICAN FIRE-ENGINES,
MANUFACTURED UNDER
MESSRS. WELLINGTON LEE & CO.'S PATENTS



Comprise all the latest improvements brought out in America, together with some modifications to adapt them for use in this country.
These Engines are without fly-wheels, eccentrics, or dead centres, and are of considerably less weight than any others of equal power hitherto made.
Size E is capable of delivering from 500 to 1,000 gallons of water per minute, according to the height and length of hose, and weighs, in working trim, less than 3 tons.
Size F, which is the next smaller, will throw about half the above quantities, and weighs only 40 cwt.
A novel facility is given in these Engines of changing, in a few minutes, the size of the pumps, so as to throw either a very large quantity or a very high jet, as the buildings to be protected from fire may render necessary.
MANUFACTURED BY
EASTON, AMOS, & SONS,
GROVE, SOUTHWARK, S.E.

The PRIZE MEDAL for SUPERIOR PATENT SASH and BLIND LINES, was awarded to JAMES AUSTIN, at the INTERNATIONAL EXHIBITION, 1862.
AUSTIN'S IMPERIAL PATENT SASH and BLIND LINES
To BUILDERS, CARPENTERS, and BLIND MAKERS.
J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his
IMPERIAL PATENT FLAX SASH-LINES
of which he is now making four qualities, and he strongly recommends that in all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently cannot give so much satisfaction to the consumer.
They can be obtained of all Ropemakers, Ironmongers, Merchants, Pasters, and Wholesale Houses, in Town and Country.
ESTABLISHED 1774.

SASH WEIGHTS, 5s. per cwt. at Ashton Wharf, Blackwall, and at Hope Wharf, near the Church, Rotherhithe.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER, at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Iron-mongery, Brass Foundry, Nails (wrought and cut), Copper, and Zinc; Patent Locks of all descriptions, China, Glass, and Wood Furniture, of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilators, &c.; and the New Registered Venetian Ventilator, so much admired, 6s. 6d. each.
J. H. BOOBBYER (late STURCH & BOOBBYER), established nearly 200 years, for the supply of GOODS of the BEST MANUFACTURE, at the LOWEST PRICE.
14, Stanhope-street, Clare market, London.

PATENTED HOT AIR APPARATUS in CAST-IRON, consisting of prismatic tubes, to be applied to chimneys with flues and heat conduits. By this system is obtained heath, durability, a clear fire, security, economy.—An apparatus in use can be seen, every day, at the Office of M. LEWAI, Nos. 5 and 6, Philpot lane, City.

THE LARGE 3½-Ton BELL, EXHIBITED at the INTERNATIONAL EXHIBITION, by Messrs. DENT, of the Strand, in connexion with their Clock, is now to be DISPOSED OF, at a GREATLY REDUCED PRICE.
For particulars, inquire of
JOHN WARNER & SONS,
BELL AND BRASS FOUNDERS TO HER MAJESTY,
8, CRESCENT, CRIPPLEGATE, LONDON.

TO BUILDERS in IRON or ZINC.—WANTED, a GLASS-HOUSE, built in London.—Apply to Mr. LAXTON, 5a, Arundel street, Strand.

GLASGOW CORPORATION WATER-WORKS.—PUMPING ENGINES FOR SALE.—The Glasgow Corporation Water Commissioners are prepared to SELL Two Powerful PUMPING ENGINES, used up to March, 1860, in supplying the city with water, and still in good working order. One of these Engines when at work raised 230,000 gallons per hour, to a height of 96 feet; and the other 150,000 gallons per hour, to a height of 195 feet.—For further particulars, apply to Mr. GALE, Engineer, Water-works Offices, 23, Miller street, Glasgow; or to
4th November, 1862. JOHN BURNET, Secretary.

TO CHURCHWARDENS, MILL PROPRIETORS, and OTHERS.—GEORGE FRITH, BUILDER, &c. Coventry, begs respectfully to call the attention of the above parties to his method of REPAIRING CHURCH SPIRES, CHIMNEY SHAFTS, and other elevated structures, without the expense of scaffolding. Church spires taken down and rebuilt, painted, repaired, &c. Chimney-shafts repaired, pointed, and new caps fixed. New vanes and all kinds of lightning conductors applied. Estimates given. References from architects, engineers, &c. Circulars illustrating the principle and containing testimonials sent free on application as above.

MATTHEW T. SHAW, 64, CANNON STREET, LONDON BRIDGE, E.C.

Orders requiring Despatch and Punctuality can be executed in a few days.

ST. PANCRAS IRON WORK COMPANY,

OLD SAINT PANCRAS ROAD, LONDON, N.W.

PATENT WROUGHT-IRON STABLE FITTINGS

SHOULD BE ADOPTED FOR THE FOLLOWING REASONS, viz.:—

That the BREAKAGES in Cast-Iron Fittings are numerous, and that one fracture from a kick, or other cause, may occasion an injury to a Horse, and involve a loss equal to the entire expense of fitting up the Stable. The fear of this has led to the use of wood, and, in the case of Cast-Iron GUTTERS, to the adoption of another and less effective mode of draining.

PATENT ENAMELLED TOP PLATE MANGER, WITH RACK AND WATER-TROUGH,

The whole of which, except the Rack, being enamelled, can be kept as clean as a DINNER PLATE.

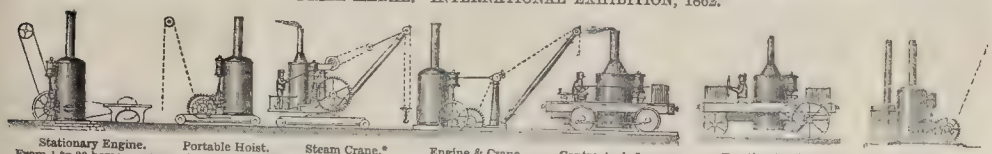
PATENT FASTENINGS FOR THE DOORS OF LOOSE BOXES.

These Catches and Hangings work easily, are self-acting, and cannot be put out of order: by their use all projections by which horses are often blemished are rendered impossible; advantages peculiarly their own.

THE PATENT HARNESS FITTINGS

Keep the Harness and Saddles in shape, and are constructed so as to admit the air getting to the underside of them when hung up, thereby insuring a quick and perfect airing from any wet or moisture.

EVERY DESCRIPTION OF STABLE FURNITURE.



ILLUSTRATED LISTS ON APPLICATION TO

ST. PANCRAS IRON WORK COMPANY,

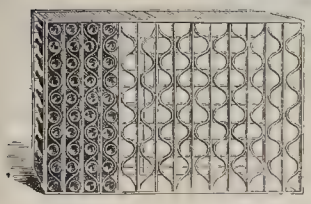
WROUGHT IRON WINE BINS.



FARROW & JACKSON

Beg to call the attention of Architects and Builders to their Wrought Iron Wine Bins, which are ADAPTED (as shown) either for BRICK ARCHED VAULTS or CELLARS with FLAT CEILINGS, the mode of fixing in either case being so simple, that they may be put up by any ordinary workman. They combine great strength with lightness and economy of space, and their DURABILITY has been satisfactorily PROVED DURING THIRTY YEARS.

The Shelves are formed of Plates of Iron laid on Bars, which rest on the Cross-bars of the Lattice Uprights, and are removable at pleasure.

Plans and Estimates furnished, and Cellars fitted complete in any part of the Kingdom. Also their

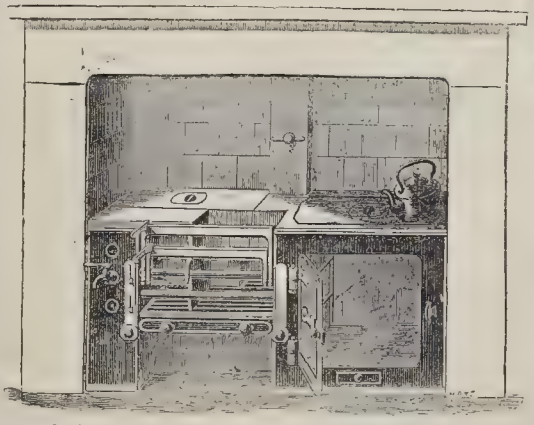
CUNDY'S PATENT ECONOMIC, BRICK-OVEN, DOUBLE FALL, DOWN-BAR KITCHEN RANGE.

This drawing represents a Range 4 feet long, 2 feet 4 inches high, and 17 in. deep.



The Hob over the top of the Oven forms a HOT PLATE; the fire passes under it and all round the oven, thereby heating it thoroughly and equally all over.

The sliding Hob, which is fastened to the Winding Cheek, also forms a Hot Plate.

The Oven and Hob can be kept sufficiently hot for the purpose of baking and boiling, with the fire only six inches long.

This Range can be fitted up as a close Kitchener, with Two Ovens, Hot Closets, &c. if required.

This Range, also Cundy's Multum in Parvo Poor Man's Kitchener, also Cundy's Patent ORIGINAL FIRE-BRICK Warm Air VentilatingStove, suitable for CHURCHES, HALLS, SCHOOLS, and STAIRCASES,

Can be seen in action every day from Nine till Seven, at the Show Rooms of the MANUFACTURER,

THOMAS PUGH & CO.'S NEW PATENT ECONOMIC SELF-ADJUSTING MORTISE AND RIM LOCK FURNITURE.

BOND & SCAMMELL (late Thomas Pugh & Co.)

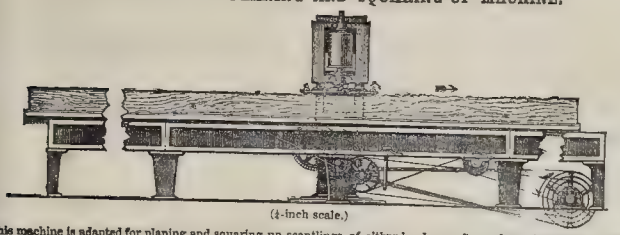
WHOLESALE IRONMONGERS,

13, KING STREET, SNOW HILL, LONDON.

NUT PLATE.

We invite particular attention to the PATENT LOCK FURNITURE, which we do not hesitate to say is the most perfect article now manufactured, great improvements having been recently made in it. It has been extensively used in public and private buildings, in Her Majesty's Pavilion and Camp at Aldershott—alone, many hundred sets without one single failure. It is applicable to all Locks and Latches, both rim and mortise, and effects a most secure fastening, without any screw in the neck of the knob. Perfect action guaranteed in both Locks and Furniture, if the Locks are of our own manufacture.

New rich designs in glass, china, brass, bronzed, gilt, carved woods, inlaid, &c. &c. or to any design.



THIS FURNITURE MAY BE HAD WITH PLATES OR NUTS.

A most complete and extensive stock of every description of locks, latches, brass foundry, and ironmongery, required for buildings, of the best quality manufactured, at the lowest wholesale prices.

*** Illustrations and particulars sent upon application.

S. WORSSAM & CO.'S

PATENT IMPROVED PLANING AND SQUARING-UP MACHINE.

(¼-inch scale.)

This machine is adapted for planing and squaring up scantlings of either hard or soft wood, up to 18 inches wide and 9 inches thick. The cutter-disc is furnished with a set of Wilson's Patent Cylindrical Gouges, which will last as long as eight sets of the ordinary gouges without being sharpened.

For priced illustrated Circulars, with full particulars, apply at the Works, 304, King's-road, Chelsea, S.W.

MUSGRAVE'S PATENT STABLE

FITTINGS and HARMLESS LOOSE BOXES.

MUSGRAVE'S PATENT IRON COW-HOUSE FITTINGS and IRON PIGGERIES. These Inventions are confidently recommended as possessing numerous advantages not to be found in anything hitherto made.

At the late meeting of the Royal Agricultural Society at Leeds, MUSGRAVE, BROS. received a SILVER MEDAL and two Awards of "highly commended" being the only prizes conferred on any competitor in this class.

MUSGRAVE'S PATENT SLOW COMBUSTION STOVE.

This Stove is the nearest approach to Warming by Hot Water, and an excellent Aid in Ventilation.

It will burn in Churches from Saturday till Sunday Evening, without attention during the hours of worship. In halls will burn day and night for weeks, with little care. Capable of warming a large apartment for twenty-four hours at a cost of Threepence; and deserving of special attention, because of its safety, healthfulness, durability, and extreme simplicity.

Full particulars will be sent on application to the Inventors and Makers

FIRE-PROOF CONSTRUCTION.—

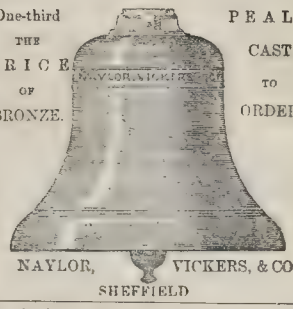
FOX & BARRETT'S PATENT.

This improved system of fire-proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.

The system combines ECONOMY with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete, so constructed that each floor becomes in effect a beam of artificial stone with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one.



Further information may be obtained of the Proprietor of the Patent,

IMPORTANT TO ARCHITECTS, ENGINEERS, BUILDERS, RAILWAY, AND OTHER COMPANIES.

VIEILLE MONTAGNE ROOFING ZINC.

Company's General Agency, 12, Manchester Buildings, Westminster.

Zinc properly laid has been proved by most extensive and long experience in France, Belgium, and Germany to be a most secure, durable, and economical covering, and is now preferred to all other materials for roofs. Its extreme lightness makes it most valuable for covering buildings requiring large spans with comparatively light framing. On a rough calculation it may be estimated that not less than 41,000,000 square feet is the average quantity of Roofing surface now annually covered in the above countries alone. Within the last few years persevering efforts have been made to introduce into England proper workmanship, in accordance with the principles which are observed on the Continent, and which alone can secure the sound and perfect construction of a Zinc roof. To aid in extending as much as possible the knowledge of these simple rules, models showing all the details are to be seen in the Architectural Exhibition in Conduit-street, and the following, selected out of a very great number of recently constructed roofs, are referred to as examples:—The Patent Granary, West-India Docks; Copenhagen Works, Limehouse; a private house in Holland Park; Homes for Poor Merchants' Clerks, Muswell-hill; a large Warehouse, 77, Thames-street; Ship roof, Sheerness Dockyard; the Victoria Station, Pimlico; the Stations in the Metropolitan Railway; the Stations of the Madras Railway Company (400,000 feet); the Warehouse of Messrs. Oakes, Brothers, & Co. Madras (20,000 feet); the Refreshment Rooms at the Exhibition; the Verandah of the Horticultural Society's Conservatory; Gloucester Railway Station; Messrs. Horniman & Co.'s Tea Warehouse, Wormwood-street; Messrs. Hoare & Co.'s Brewery, Smithfield; Cape Town and Wellington Railway (60,000 feet); Fifty new Dwelling Houses at Palace Gardens-terrace, Kensington; Twenty ditto, Inverness-terrace, Bayswater.

Plans, Estimates, and all useful information will be furnished, without charge, by applying to either of the Directing Architects.

JAMES EDMESTON, 5, Crown-court, Old Broad-street.
R. G. FISHER, 12, Manchester-buildings, Westminster.

N.B. No covering can be more economical, durable, and secure than Zinc when well laid, but good Zinc badly laid will spoil the roof, and, with a view still further to encourage good work, a special Discount will be allowed to all persons upon the Zinc used in roofs, when certified by either of the above Architects to be properly laid.

BATH STONE OF BEST QUALITY.

DWELLINGS OF THE WORKING POPULATION.

THE SOCIETY for IMPROVING the CONDITION of the LABOURING CLASSES has published the following WORKS, which may be obtained at the Office, 21, Exeter Hall, Strand: "The Dwellings of the Labouring Classes, their Arrangement and Construction, with Descriptions, Plans, &c. of existing Model Houses, and Designs for Dwellings adapted to Towns as well as Agricultural Districts." "The Model Cottages of the late Prince Consort, and of the Windsor Royal Estate."

By HENRY ROBERTS, Esq. F.S.A.

Fifth Thousand, enlarged edition, price 4s. cloth.

"Home Reform; or, Word the Labouring Classes may do to Improve their Dwellings. an Address to Working People." Third Thousand, price 3d. "The Physical Condition of the Labouring Classes, result of a Visit to the Seats of their Dwellings and the Beneficial effects of Sanitary Improvements adopted in England."

By HENRY ROBERTS, Esq. F.S.A. Price 2d

Working Models on a large scale, with specifications, &c. for Agricultural Labourers' Cottages, and for Dwellings adapted to Towns or Villages. Each design complete on one sheet. Price 6s

Just published, for 1863, price 4s. the Fifty-third Edition of

SKYRING'S BUILDERS' PRICES,

of Materials and Labour, to which is added a Table of the Prices of Materials and Labour, to Bricklayers, Carpenters, Masons, Plasterers, Plumbers, Painters, Glaziers, Paperhangers, Masters, Builders, and Workmen, containing the whole of the Metropolitan Buildings Act, and a variety of new and useful information.

Sold by SIMPKIN & CO Stationers' court, London, and may be had of all Booksellers.

BUILDER'S PRICE LIST BOOK, 1863.

Price 2s. 6d

WILLIAM DAWBARN & CO Liverpool, have now ready their Builder's Price List Book for 1863, containing the prices of all Building materials, timber, slates, iron-ware, tiles, stone, glass, &c. &c. made up and corrected to the present date. The book contains sundry designs and the fullest calculations for builders generally.

The price is 2s. 6d. to those who have no account open with W. D & Co; but persons desirous of opening an account, on giving satisfactory references, can have one, postage free.

Price current of Timber and Deals are issued monthly, and may be had on application.

Forty third Edition, price 4s. bound in cloth,

LAXTON'S PRICE BOOK for 1863, for ARCHITECTS, ENGINEERS, BUILDERS, CONTRACTORS, SURVEYORS, &c. established 1846, containing with a variety of new and useful matter, more than 12,000 Prices, embracing all the various trades connected with the operations of the Architect, Engineer, Builder, Contractor, and Surveyor; together with 7,000 useful and important Memoranda relating to the same. Also, full Descriptions of various Stones for Building, from the Quarries of England, Scotland, and Wales. Instructions for Estimating and Constructing Calculations and Sketches of Cast and Wrought Iron Girders, Columns, &c. &c. The whole carefully revised and corrected to date of publication.

OFFICE, 13, WARWICK COURT, GRAY'S INN, HOLBORN, LONDON, W.C.

Supplied by all Booksellers in Town and Country.

Now ready, 12mo. strongly bound, price 6s. (a stage 6d.)

THE BUILDER'S and CONTRACTOR'S PRICE-BOOK for 1863, formerly Weale's, for 1863. Revised by G. R. BURNELL, Esq. C.E.

This book renews the universally recognized authority in the settlement of disputed accounts. The present edition has been thoroughly revised by a well known practical architect and engineer. Not being printed from stereotype plates year after year, as is the case with some books of the kind, errors are not perpetuated, and the opportunity is taken in every reprint to introduce correct prices and other desirable improvements.

London: LOCKWOOD & CO. 7, Stationers'-hall-court, E.C.

THREE STEEL ENGRAVINGS and the Continuation of the ILLUSTRATED CATALOGUE are given with the

ART-JOURNAL for JANUARY (price 2s. 6d.) This, the Tenth portion of the Catalogue, comprises Mudie's Model Fountain; the Great Prize Cup by the Worcester Porcelain Co.; the Royal Bronze Vase, Bronze Figures, Stoneware and Wedgwood Ware; Glass Vases, and numerous other works. The Line Engravings are "Ophia," engraved by T. Vernon, from the picture by the late C. R. Leslie, R.A.; "Perseus Receiving Reginia leaving Carthage," by S. B. Joshua; "The Angel's Whisper," by R. Attlee, from the picture in the possession of H. Bolckow, Esq. The illustrated articles are also included in the number, and "The History of Ornament and of Costume in Art," by Thomas Wright, M.A.F.S.A. the illustrations by J. W. Faithholt, F.S.A., and "English Lace-making Scenery." The other literary contributions are as follows:—"The Revival of the Fine Arts in the Eighteenth and Nineteenth Centuries." Part I.—by the Chevalier M. A. Biglia, etc.; "Sculpture and Art." No. 1, the Representation of Water, by Professor Ansted, M.A. F.R.S.; "The Loan Museum at South Kensington," by J. Beavington Atkinson; Notes on the Raw Materials used by Artists," by Professor Archer, Director of the Royal Scottish Museum, with numerous articles on the continuation of the Illustrated Catalogue and general matter.

*** Now ready, the Volumes of the ART JOURNAL for 1862, cloth, gilt, price 31s. 6d. in which are comprised upwards of One Thousand Engravings on Wood, and Twenty Fine Engravings, which latter include the two very large Plates, M. W. Turner's principal works, Ac London: JAMES S. VIRTUE, 26, Ivy lane.

Gilt edges, price 2s. 6d. by post 2s. 8d.

WHO'S WHO IN 1863.

Sold by all the principal Stationers in town or country.

POLYTECHNIC CHRISTMAS HOLIDAYS.—The Optical Pantomime of "Harlequin and Cinderella, or The Little Glass Slipper." The story is orally and musically told by George Buckland, Esq. and the whole of the optical resources of the Institution are used to give effect to the Fairy transformations. New Philosophical Entertainment, by Professor J. H. Pepper, entitled "A Strange Lecture," in which the "Photodyne," by Mr. Rose, of Glasgow, and an illustration of Mr. Charles Dickens's "Haunted Man" (being an optical illusion devised by Mr. Duckal), will be introduced. Ventriloquism by Mr. Devon. Mr. Matthews's new repertory of comprising curiosities. Mr. King's Lectures. The Giant 'Xmas Tree, Twice Twice-le day, and Gratuitous distribution of Ornaments, Toys, &c. on Thursday morning and evening, the 15th January.

The Builder.

VOL. XX.—No. 1040.

The Metropolitan (Underground) Railway.

HEN the project of a railway passing in a tunnel along a line of London thoroughfare, and to serve London traffic, was first distinctly put forward, there were many who doubted of its accomplishment. As to the construction; though a course for the Metropolitan Railway had been found, which would intersect the sites of few houses, there would still be the sewers to fall foul of, or to escape, and that wondrous reticulation of pipes which the wisdom of London ratepayers suffers to exist for the benefit of the paving "interest," and the particular inconvenience of riders and drivers; whilst, assuming that breakage of these arteries and veins could be prevented, so that a small river like the Fleet, or the whole contents of a waterworks' reservoir, would not be rushing from time to time through open cutting or unfinished tunnel, the difficulty was to tell what could be done under the apparently numerous probabilities of sewers, mains, and pipes, intersecting the line at the very level of rails or arch-springing, also to see on what available areas of ground stations could be placed, and how the passage of frequent trains, if safe, could be rendered free of nuisance in a length of subterranean way devoid of the open shafts which may have been sometime deemed necessary to ventilation in tunnels. Though sufficient reason has, we think, existed for the postponement of the certificate of the Government inspector, the bulk of the difficulties had some months ago been overcome, and in a manner which should command admiration especially of the class of readers we address; and the last of the essentials to efficient working of the line, the system and mechanism of signals, originally devised with appreciation of the importance of that branch of the arrangements, has at length, we are assured, been brought to the state of perfection which will allow the line to be used for traffic on this present Saturday. Some of the features of design and construction which the work comprises, will be noticeable at the stations; but many of the chief items of contrivance and skill are no longer obvious; and they have not been described in print. Our readers, therefore, may feel interested in results of an attempt which we shall make, to afford a more clear apprehension of the structural details of the great undertaking than has been given by some of our daily contemporaries; whose favourite phraseology in their now frequent notices of public works, that such or such a feature is "of immense strength," does not supply much information on the matter taken in hand,—even viewing the limited digestive power, as regarded, of "the general reader."

We have, in our last volume, and previously, not only stated what was the course of the line, but have given engraved illustrations of one portion of the work, at King's-cross, which has novel features, and involved certain difficulties of construction; and we have also printed some particulars of the accident of the bursting of the Fleet Sewer, at a point just north of the present City terminus, into the open-cutting which there, as in some other parts of the line, is substituted for tunnel. This accident, we may say, the company's engineers maintain was not caused by their works, but by faulty design and very bad construction of the sewer itself; the first portion of the accident, which involved but about 20 feet of the sewer, being, through inattention, left conducive to the second and serious calamity, which involved a length of about 100 feet; when the ground at the back of the company's retaining wall, became saturated with water, which at length undermined the foundations, so that the wall fell,—when it came down in a mass, showing the excellence of the workmanship. The inundation of the company's works in this case, where the sewer runs parallel with the railway, might have been merely one of several serious accidents from sewers and water-mains, had not the constant skill and watchfulness of the engineering staff,—and we must add, of the contractors,—been directed and alive to the prevention of them. The Fleet Sewer had to be carried across the main line, as we shall mention hereafter, and three times across branch lines, at a level below that of the crown of the arch of the tunnel, where it occurs, and in a manner to prevent the slightest leakage: the 3-feet service-main of the Grand Junction Water Company had to be held slung in chains for weeks, across an open cutting, when serious disaster might have accrued ere a messenger could have reached the sluice-keeper at the reservoir; and numerous smaller sewers and pipes had to be diverted, or to be taken across the tunnel, each with its different contrivance suited to the level and angle of crossing. For many of the water-pipes so intersecting, a special casting as supporting trough, was required to be built in with the brickwork as a portion of the crown of the arch; the pipe being so arranged in its receptacle, that the first effects of leakage would be retarded, and that the circumference of the pipe could be got at for necessary repairs from the street-level. In these several cases of intersection, usually the angles of crossing were different; and no casting could be ordered, or drawing even made, till the ground had been opened and dimensions taken: thus, delay in portions of the work was of frequent occurrence. Indeed, in numerous instances, positions of water-pipes were found to be different to those given by any plans to which the engineers had access when their own drawings were made. The flanged-joint pipes, not allowing much settlement, required more care than the socket-joint. Meanwhile, or rather from the commencement, the footways and the entrance-ways to houses had to be maintained; and the placing the supports for these was alone a work of considerable ingenuity. The company were bound to reinstate some things for which the opportunity might well have been taken to effect improvements; and the perils of injunctions of the Court of Chancery were freely thrown in the face of the undertaking. A passage-way under the road, from the garden of Park-crescent to that of Park-square, was to be retained in its level as found,—so that it became the datum for the depth of the railway below the road; whilst, some distance westward, at Stafford-street, one of the sewers of Marylebone was some feet above the level of rails. In this latter case, the authorities at first would accept neither of the courses offered,—the diversion by the side of the railway, or the passage below the line in inverted syphon form,—so that, after the gradients for the whole line had been decided upon, everything seemed to be thrown back for a fresh design under conditions of level which would have made the line very different from what it is. The two houses forming the horn of Park-crescent, north-east, which the line passes under, the company were required to purchase, to take down, and to rebuild exactly as they were, to the smallest detail. To accomplish this latter portion of the work required drawings, and the gutting of the buildings in order to make them. The drawings cost the company 150*l*. They possess some value for inquirers into the growth of modern practice of building. The company were advised that they could not hope to let their houses, unless there were basements of 8 feet in the clear height; therefore those dimensions had to be kept, and the houses carried by such an arrangement of girder-construction as would leave sufficient headway in the tunnel, and shut out as much as possible, noise of the passage of trains.

These instances will be sufficient to show the sort of skill that is required to construct a line underground, traversing any portion of area of a town; and it will be observed that the difficulties are different to, and greater than, those of formation of ordinary tunnels, such as the tunnels under the town of Liverpool, where a considerable thickness of earth or rock separates the crown of the excavation or arch from the foundations of buildings. In such cases, the practice of modern railway-construction has eliminated difficulties. It is easier to excavate a tunnel passing at a considerable depth below a surface,—unless the Mont Cenis case, where there are no shafts, be an exception, because of the new conditions which are involved with those of the very extraordinary length and vertical depth,—and easier in the case of cutting in open country, to deal with extraordinary stratification, than it is to construct a work which, like the greater portion of the Metropolitan Railway, has to be built and vaulted in a cutting through a town; or tunnelled in bad ground, so little below the street traffic as to be in constant vibration.

Should the working of the traffic of the Metropolitan Railway prove as successful as the engineering construction appears to be, the example may be followed in many towns, despite all the apprehensions that have prevailed in the present case from the delay in opening the line. A similar line is talked of for Paris; where the difficulties from water-charged subsoil must equal, or more probably exceed, any that have been met with in the London instance. This much however seems demonstrated as to railways below the street-level; namely, that along lines of street or *boulevard* such as London needs, and must one day possess,—lines direct and of great breadth, and having the sewerage and water-service provided for in sub-ways,—railways might be formed, if not altogether underground, contrived with some of the features of lighting and ventilation which were those of the scheme which preceded this of the Metropolitan Railway, we mean the project of the late Mr. Charles Pearson, to whose memory our recognition of his usefulness is due. At least we may say, that viaducts above the street level are for many reasons to be regretted. They interrupt the view,—as will be found shortly, though in a case where we may be told it could not have been avoided, in the crossing of Ludgate-hill; and the girder bridges of their engineers are vile blots on a city: these viaducts are objectionable as interfering with the circulation of air which is necessary in towns, especially in such districts as those traversed by the viaducts of the Great Eastern, North London, and Blackwall, and the South London lines; and their arches, which indeed might be turned to account (as long since suggested), made into comfortable dwelling-places for families who have inferior accommodation, or have been ejected from houses taken down for these very lines, seem to bring in little or nothing to shareholders, whilst they are to some extent resorts of the dangerous classes, and receptacles for dirt and filth. We do not press these points very strongly as in favour of the alternative of railways subterranean or below street-level; but we say that they deserve to have their due value considered now that opportunity has accrued for testing, in its working, the Metropolitan Railway, a line however which perhaps would

be inferior to such railways as a proper scheme of London street improvement would admit of.

Of course, if a line in any part of its length were liable to inundation, the objections preferred to the principle of the Metropolitan Railway would hold good; and there may be cities in which it would be impolitic to introduce the system. But with a tolerable level in the line of street, and no worse arrangement of the sewer levels than exists in London north of the Thames, if not south, and with such provisions for keeping a tunnel dry as exist in this Metropolitan Railway, the objections to the system have not all the force that has been attached to them. There is this further, to be said on the question between viaducts and underground lines, that given the most favourable circumstances for each, there is a difference between the two, of about 11 feet of staircase, in favour of the latter system. About 4 feet more of headway are required in arches over roads, for laden carts, than are required in the arches which a railway train has to pass under; and the height of the platform has to be *added* in the case of the viaduct, whilst it *reduces* the number of steps in that of the line below street-level.

It may be obvious that the rejection of the street-level itself, in favour of a level above or below it, for the railway, is due to the employment of the locomotive engine and the high rate of travelling. Were not the speed a requisite, the horse-tramway, advantages of which have heretofore been perceived by us,—and should be still advocated, spite of the mistakes that have unaccountably attended its introduction,—or some form of traction engine,—might be sufficient. There are indeed some cases where locomotive engines and trains pass on rails that are laid in streets, level with the carriage-way. An instance in Genoa was referred to when the tramway system was under discussion. But the manner in which similar railways along the line of the Liverpool Docks, and and at Holyhead, are worked, shows that they have no concern with the question of passenger traffic at a rapid rate, as the case is of London.

Hence we discover that in the contrivance of a tunnel line such as the Metropolitan, we are instantly confronted by the question of two alternatives, the one the quick extraction of the steam which would be given off from half-a-dozen chimneys of locomotives that always would be on the route, and the other the prevention of escape from the description of engine that we employ. Without the settlement, primarily, of the point, whether there were means of avoiding the nuisance we have referred to, it would have been scarcely wise to enter upon the construction of such a line as that which from King's-cross to Chapel-street, Marylebone-road, near the Yorkshire Stingo, has no shafts, and no means of ventilation (except at the ends) larger than might be required for the breathing powers of a number of persons such as the number of passengers in the trains. The object has been attained by the construction of a locomotive that is provided with the means of condensing the steam, and damping the fire. In the common form of engine, the steam that has done its work in moving the piston-rods which move the wheels, escapes into the chimney, where it assists the draft; whilst the meeting wind is a constant blower to the open fire. The locomotive for the Metropolitan Railway has a valve in the chimney, to be worked by the driver from his station in the rear of the engine, so that the steam can be instantly shut off from its escape. It passes, instead, into cold water of a tank that is carried under the boiler; and there, provided the water be changed often enough, or does not get too hot, it is condensed, as it is in the common stationary condensing engine. The under-"blowing" of the fire is intercepted by letting fall a flap to the latter. The two valves or flaps are, in the tunnel portion of the line, shut; but in the open cuttings, the ordinary steam-jet draught and air-blowing of the fire, and the non-condensation or escape of the steam, are, exactly as in ordinary engines on other railways, allowed to go on, for the better accomplishment of the distance in tunnel, with the husbanded force or pressure of the steam made whilst the locomotive was at the terminus, or travelling with space overhead. Coke is burnt, so that there is no smoke. At an inspection by Colonel Yolland, on the 27th of last month, so much time was necessarily spent at the stations, that the trial could hardly be regarded as a fair one for the engine. The locomotive, driven by Mr. Gooch, jun., however, behaved admirably; and there appears no reason to doubt that all that the public will demand will be fully accomplished. Should it be necessary to let off steam at any of the stations, as King's-cross, unusually large openings in the roof are found there; and the same means of taking in water as on other railways, are provided at places between the *termini*. As, however, it is necessary to calculate against any contingency, means of escape from the tunnel itself, for steam that may have accumulated, may be perfected, should such agency be found necessary. These means consist of certain small circular openings in the crown of the vault, in that portion of the line where the levels would conduce to an accumulation of steam, which openings form the terminations of pipes extending laterally to a junction with a larger and longitudinal pipe in the pocket or spandril of the arch, to which large channel some permanent contrivance for exhaustion can be attached. Ordinary ventilation required in tunnels, as they are on other lines of railway, will go on without shafts: there is always a current; and certainly we have experienced no inconvenience in walking through the tunnels on the Metropolitan Railway, or in passing through them on an experimental train. The question will hardly be asked, why engines of the sort described have not been in use on ordinary railways. The nuisance there, which is increasing, is from coal-smoke, rather than steam, which indeed in the landscape is rather pleasing; whilst it may be possible to carry the supply of water for condensation four miles, and not to carry a larger quantity, or to arrest the train at short distances frequently.

The reader having appreciated difficulties of the case of an underground railway, may now feel interested in an account of the chief features of the new metropolitan line (only some of which have been slightly referred to), and including those of the stations. To make the whole intelligible, we must repeat, and supplement, some general particulars. The line now extends, from a junction with the Great Western Railway, at the Bishop's-road Bridge (where there is a station), south of the Paddington Basin to Praed-street; the eastern portion of which last it passes along; it then crosses the Edgeware-road and passes parallel with the north side of Chapel-street (in which there is a station), to near the junction of Stafford-street with the Marylebone-road opposite the Yorkshire Stingo: thence it continues along the Marylebone-road (with a station at Baker-street) to Park-crescent, where it leaves the street-line to pass under the houses we have spoken of, and appropriate the patch of ground at the end of the Portland-road for a station: it then regains the New-road, and leaving a station at Gower-street, passes through Euston-square to King's-cross, where on the space between Gray's-inn-road and Battle-bridge, is the largest station, and whereabouts are the several branches, single lines, to the arrival and departure sides of the Great Northern Railway. One connexion, which is intersected by a branch of the Fleet, has been lately commenced; and it will diminish the chances of accident; as trains passing along it will avoid the awkward crossing near the pointsman's station. This station, a small spandril space of plan left between the main line and two branches, and domed over from the walls of the three tunnels, was illustrated by us as above said. It does not appear to be ready for use, indeed the rails in the branches were not all completely laid at the time of our last inspection. The branch which passes under Maiden-lane, joins the Great Northern line at some distance beyond the northern end of its passenger station. From King's-cross, south-easterly, open cutting with retaining walls commences: it is crossed by many bridges; and the line passes south-west of Bagnigge-wells-road, is crossed by that road and Wharton-street, and continues between the road and Granville-square, whereabouts there is a short tunnel. After a further portion of open cutting, it passes Coldbath-fields prison by a tunnel (which was driven) to open cutting by the Clerkenwell Sessions House, and to the station in Victoria-street. There is no portion of the line west of King's-cross that is open, except a large area of ground (where the engines may be stalled in recesses which have been built for them) between the second station we mentioned and the Yorkshire Stingo, and a short space close to the station at the Great Western Railway Junction. There is no branch to the London and North-Western Company's line. That company, it may be supposed, are content with their access to the City *vid* the North London line, and direct to the station which they will have near Moorgate-street. The stations of the Metropolitan Railway, seven in number, are named Bishop's-road, Paddington; Edgeware-road; Baker-street; Portland-road and Regent's Park; Gower-street, for Tottenham-court-road and Euston-square; King's-cross; and Farringdon-street stations. The last-named of these is temporary. The line will eventually be continued, crossing Snow-hill and Skinner-street, to a junction with the London, Chatham, and Dover Railway, at its station on the site of the Fleet Prison; whilst a branch, for which the Act has been obtained, is intended to pass between Charterhouse-square and Long-lane, and to cross Barbican, Red Cross-street, White Cross-street, and Milton-street, ending at the Pavement, Finsbury-circus. Mr. Bunning has designed the New Market to occupy a site which would be intersected by the present course of Smithfield Bars; and it is intended that the railway should pass under the market. There are Bills in Parliament for western branches, or extensions, of the Metropolitan Railway, one of them to start in Praed-street, and pass the front of the Great Western Hotel, and to skirt the Serpentine, and end at Hyde Park-corner; and another to start from this latter branch and follow the western portion of Rotten-row to Kensington, ending in Young-street.

In the completed portion of this comprehensive scheme, the general dimension of breadth in the clear of the tunnel, or span of the arch, is 28 feet 6 inches, the brickwork being 2 feet 5 inches thick, or six rims, and backed by concrete to the walls; and the height from the level of rails to crown of the arch, is 16 feet 6 inches. The rails are laid to the "mixed," or broad and narrow gauge; and we believe, the statement that the tunnel had been formed too narrow, is correct only so far as the lengths between the stations are concerned, where a train should never have to stop, but where the corner of an opened door might touch the vaulting. Plenty of ingenuity has been applied in shaving close; and much originality with calculating power, has been exerted to combine moderation of expenditure with a response to the requirements, and perfect strength under the extraordinary conditions of railway engineering and railway-station architecture. The line will be worked by the Great Western Company.

The gradient is 1 in 100 each way from the lowest point, that where the line enters the City. The course of the line is chiefly in curves; the sharpest of these being one with a radius of 200 yards. In the driven portions of tunnel the crown of the arch reaches in the clear height, 18 feet 9 inches. In the open cutting, until the line widens out to the so-called Farringdon-street Station, the opposite piers of the retaining walls are counterforted across the line, by iron strutting similar to that to be seen on a similar portion of the line of the London and North-Western Railway in Camden Town. The bays between the piers are battered, and are segmental on plan to resist pressure of the earth; and within some of the stations a thin face-wall is added, leaving a cavity; so as to reduce as much as possible any influx of damp.

Every portion of the length of tunnel has of course a drain, which runs underground in the centre between the two lines of rails; and every area and pocket, and each basin or funnel-formed collector of land and surface water at the back of walls or on asphalte covering of the brickwork of the tunnel arch, has its down-pipe and connexion carefully provided. As the work approached Victoria-street, the ground was very wet; and the Coldbath-fields tunnel is still at various places undergoing the processes of pointing with cement, and cutting through the brickwork for the insertion of the catchwater-basins and down-pipes, which together may force and conduct the flow to the general drain-level of the tunnel. Damp and wet, indeed, are to be found, even in stations carefully planned and constructed, but underground; these appearances, however, are not such as to affect the use or substantiality of the work, and are expected to cease in part; and experience on other undertakings has tended to show that after an appearance of moisture from land-drainage leaves brickwork, the work there becomes harder than elsewhere. The strata may have something to do with that.

In one portion of the line between King's-cross and Clerkenwell, where the Fleet sewer had to be carried by girders in an iron water-tight duct of large dimensions, across a tunnel and below the crown of its arch, a short portion of a second and parallel line of tunnel for an expected future widening of the railway has been built, and the Fleet carried over or through both. The whole forms an admirable piece of work. The thin partition wall from which the two vaults spring, has iron castings built in, to get the requisite strength.

South of the King's-cross station, there are some remarkable skew bridges,—in particular, one for a wide street intersected by a narrower one, which gives a curious appearance to the bridge. The

smaller vault seems to groin into the larger one; though the case is not so.

Close by the Clerkenwell Sessions House, there is a steep bank of clay held up temporarily by a double row of piling at the foot. Hereabout, and for the station, concrete walling, or facing to the bank of earth, has been used where we should hardly care to trust to it.

The stations are less remarkable externally, and in architectural details, than they are for their disposition of plan, and for the clever construction of some of them, as the Baker-street and Gower-street stations, which nearly resemble one another. The Paddington, Edgeware-road, and King's-cross stations, have each an iron-framed roof, spanning the lines, and the arrival and departure platforms; whilst the booking-offices, spanning the line at a higher level, are carried on lattice girders, and are constructed of wood wherever light weight was desirable. These stations are perfectly lighted; in fact the King's-cross station seems in all points the best in London. Safety in crossing the line has been well studied, each of these stations having a bridge, or more than one, for the crossing. The Paddington Station has the front of its booking-offices in Bishop's-road. The architectural details and wall-facing of all the stations except the Edgeware-road Station (where the material is Ransome's stone), are in cement. The result is not more satisfactory than it usually is, where imitation of stone-worked mouldings and ornaments is attempted,—as indeed perhaps it ought never to be. The least pretentious of the buildings are the best; the King's-cross roof, effective enough within, is only a deformity in the street; and we must confess the extreme difficulty of the problem to make it otherwise. The roof of the Paddington Station is of lighter members than the roofs of the Edgeware-road, and King's-cross stations, where the principals are of wrought and riveted iron crossing the span in the form of an arch, and carrying light trussed girders as purlins, each of which is bridged by two rafters or secondary principals. These last-named members seem each to rest against the side of the top purlin, instead of butting against an opposite rafter or having the strain resisted from the opposite half of the roof. So the construction seems, looking at it from below, however it be as to real strength. There are two different arch-formed roofs to the King's-cross Station, separated by the bridged booking-offices, and one of wider span than the other; for, here, one of the branches of the Great Northern Railway curves in, and there is an intermediate platform with its separate staircase. Space is found at King's-cross, for a water-tank, holding 25,000 gallons. The roof-covering is formed in alternate breadths of glass skylight and zinc, which are stepped at each purlin to leave a large opening for ventilation, without louvres, which last offer much obstruction. In place of louvres, each division of the covering has considerable projection as eaves. Where the lights do not occur, the soffit of the roof is boarded. Ends of roof, the spaces which we may call *tympana* or gables, are left open: though very small, it is found that they give escape to a large quantity of steam compared with even non-louvred openings at sides of a roof. A small portion of the line onward is covered with a ridge and valley roof, extending the station. The southern halves of each span are covered, not with glass. Near this end of the station is a bold piece of construction, comprised of a skew girder-bridge, over the main line, and a brickwork arch, nearly semicircular, over the starting portion of the Great Northern branch. It is also askew. The pier which carries half the weight of the arch and thrust, and half the weight of the massive girder-bridge, is but 1 foot 8 inches on the narrowest face; though it becomes wider where the chief pressure is, and is of ample width on the further face. Passing back again through the King's-cross station, we notice before coming to the tunnel mouth of the main line, a skew-arch which is the mouth of the tunnel of the branch line. Its face of opening, or span of arch on the skew, is about double the transverse span of the general vaulting of this branch line. As brickwork, this specimen is very consoling to those who have thought the art extinct: but similar praise might be given to much of the work on the same line of railway. The pointsman's station, with the starting of the other branches, is reached at a short distance in the main-line tunnel.

The Edgeware-road station much resembles the King's-cross in the form and framing of its roof; though it is much smaller. We need not describe it, therefore; nor need we say more of the Paddington Station than that the roofed area of the rails and platforms (62 feet 3½ inches span) is well lighted, and that the trusses take the form of a segmental or elliptical arch, with tie, and a filling-in of diagonal bracing, the covering being arranged in ridges and valleys, six side spans, and one wider one in the centre, dividing the width spanned by the principal. The underground portion of the line from near this station, for some distance in the direction of Praed-street, has very little vertical space to deal with: the construction is therefore that of cross-girders and arches from them, instead of that which prevails further on.

At each of the three underground stations between King's-cross and Chapel-street, the tunnel has a larger span of arch, to afford room for the platforms, and has as much increased height as could be got, having regard to the fixed level of the street-pavement, and to the requisite strength of brick rims or rings; and other methods of lighting than those we have described, have had to be extemporized; and this has been managed with much skill. At the Portland-road station, which is the best of the whole number for external effect, light was got by the formation of a large eye in one portion of the crown of the vault; where ground above, had become the Company's property. This opening is glazed. Other lights are obtained from the two domes, and windows in their *tambours*, which are the chief features in the external view; and these domes have been so contrived with ventilating apertures, that an engine might stop under them and let off steam. The line is here on a curve. One platform is 217 feet in length; and the other 209 feet.

The most ingenious and clever construction on the whole line, however, is probably that seen at the Baker-street and Gower-street stations, which so nearly resemble one another that one description would serve for both. There is little change in the appearance of things above-ground from what was that of the New-road. In each case there is a small one-storied structure on each side of the road, which contains a booking-office and the heads of the separate stairs of descent and ascent to and from its side of the line. The light to the stations is got by taking space from the gardens of the houses, and constructing the vault of the station with a line of openings to the space. These apertures, or eyes, are lined with white tiles, as are also the sides of the areas; whilst the areas are roofed with thick glass carried on light iron gratings,—small apertures however being left for ventilation,—the upper surface of the glass being flush with the street-footway level; and the space being enclosed by a dwarf railing. This space is taken out of the gardens, in the Gower-street case; at the Baker-street station, the garden-gates and railings are set back, and the areas form an addition to the street, railed in however from the footways. The areas and the apertures in the tunnel vault can be got at for cleaning, and every portion is provided with drainage. The results of this arrangement for lighting are excellent. The contrivance however entailed that there should be special construction of the vault, that is to say the necessary strength in the haunches where the thrust was now to be carried from piers rather than a continuous support and abutment. The thickness is so distributed as to leave recesses of 6 feet 3 inches and piers of 3 feet 6 inches on the face; and the opening of each light is 4 feet 9 inches by a considerably greater dimension of height, especially if it be measured following the *intrados* of the vault. Sufficient abutment, beyond the backing of concrete, exists in the thickness itself, and the nearly equilibrated form of the arch. Where the rooms below the booking-offices, and the staircases, occur, the partition walls of these are the abutments; whilst, as the face of the pier is of slight width, a casting is built into the latter; and the soffit of each arch is carried and formed by a further arrangement of casting: thus these separate piers, with the arches, are all connected together. In one case where a room occurs, so that the pier could not extend back as abutment, two cast-iron struts diverging from the point of thrust to be relieved, are diagonally placed on plan and connected by a tie at the feet (or showing on the plan the form of a triangle); whereby thrust is distributed. To get the necessary strength in the work of the vault itself, and to keep the crown of the arch light, and the number of half-brick rims not so numerous or so arranged as to fill up the depth intended to be left between crown of arch and surface of roadway, or to make it necessary to drop the level of rails,—a peculiar construction of the vault was adopted, increasing the number of rims from the centre to the springing, yet preserving the bond and resistant thrust of the abutment, which latter force would have been cut at every stepping or set-off of commering rims; and the additions would have added only weight and no strength. Therefore, after the crown or middle of the vault constructed in the ordinary manner, with the bricks sommering (in our description we reverse the order of the brick-laying), the whole of the rims, with as many sets-off as were necessary on the extrados, were laid with the bricks not sommering, but with the mortar beds or joints parallel, and therefore not parts of *radii* of the circle or ellipse. Thus, the rims, added as sets-off, could be bonded to the others, and did their work. Those bricks forming the soffit, which would have presented angles, were cut where required for appearance. At the springing, the thrust was received on a skew back, cut or formed on one bed, to the proper direction of a radius, and on the other to the last of the parallel lines of the bricks. Though the wedge-formation of voussoirs, supposed to involve the property of the arch, might seem to be given up by this described method of construction, the line of thrust always falls within the limits of extrados and intrados, whilst greater strength in other respects from better bond is obtained.

The present City terminus is a temporary building covered with a wooden roof in two spans, and of slight scantlings, which, however, having been arrived at, like every other detail of the railway, by calculation, are fairly considered to be quite strong enough.

One of the great features of this railway, which we might have noted above, is the small cost of the construction. It is affirmed that the whole cost of the Metropolitan Railway will come to less than 1,300,000*l.*; whilst a viaduct line intersecting building-property would have cost four times as much. The length of the line as at present, and deducting the branches, is three miles and three-quarters. The branches added together, would make half a mile. The chief engineer, as our readers know, is Mr. John Fowler; and the resident engineer is Mr. T. Marr Johnson, to whose fertility in resources we may rightly ascribe much of what may already be presumed to be the favourable result. Messrs. Knight & Smith have executed the western portion of the work, ending at Euston-square; and Mr. John Jay has finished the line to Victoria-street. As to the safety of the line, though it is said there may shortly be ninety trains a day, and at least three each way may be always on the move, there can be no danger if the prescribed system of signals continue workable. The mechanism of levers and lights, which is combined with the electric telegraph, had till the other day moved stiffly. Now that the signals have been certified as thoroughly complete, the company might do well to assure and satisfy the public that their staff will never be worked to the point of fatigue and carelessness which brings accident. One of the points to be attended to is that of the better lighting of the carriages. The gas-lights when last we were able to judge of them, were no better than the ordinary, bad, oil lamps.

Believing that this new route may do something towards providing many classes of Londoners with better dwellings, and realizing other objects in which we have taken interest, we hope that the undertaking may have every kind of success. But six o'clock, the hour arranged for the first train in the morning, will not be early enough for working-men; and it may be questioned whether 5d. for the third class return-ticket will not be too much.

AFTER-THOUGHTS ABOUT THE INTERNATIONAL EXHIBITION.

THE further the present advances from the past the fainter will be our remembrance of the Great International Exhibition, the more vague the mind pictures upon which we shall shut our eyes and gaze. Here and there, all over the world, in glass cases, in cabinets, in galleries, on drawing-room tables, in gard-robes, in museums, in country houses, in town mansions, in palaces and churches, we shall, from time to time, come in contact with objects that were once part of the prismatic whole; but, nevertheless, as our lives trample down the days, it will be more and more difficult to bring to mind the brilliant, many-coloured, many-toned, eye-filling impressions we thought we had garnered up. There were so many adjuncts that are likely to slip from our remembrance. Let us consider the noises. There were the deafening roar of the foaming flood set in motion by the centrifugal steam force-pump, near which the human voice was inaudible; there was

the splashing, dripping, rippling of water from the majolica fountain; the tones of the great organ filling the air with ecstacy; the whirr, the twirl, the thud, the hiss of machinery in motion; the blows of the steam-hammer; the tumultuous reverberations, the clang and clash of the immense bells, the chimes of the great clock; there were the brass bands, the performances on the sax-horns, on countless pianos; the rustle of silk, the buzz of voices, the shuffle of feet; certain sounds breaking into prominence as we neared them, and subsiding as we receded from them; perhaps a word or two from one voice, all blended in one muffled, intense hum. How long shall we command a realization of this? The word may outlive the roar.

Let us recall the polyglot literature. In twenty years' time shall we ever think of the pamphlets, prospectuses, cards, in every colour of the rainbow, placed in little piles, and in lidless boxes within reach of the public, as a means of advertisement? And yet the handbills and cards offered to visitors, formed a feature of the fair, that was of curious interest. The English language looked so like a foreign tongue when printed with French type; and the French so like our own, when rendered in fair round English characters, that the effect was momentarily confusing. The translations of foreign advertisements teemed with so many mistakes, introduced such comical English; and the rendering of English into good French or Italian, appeared to be beset with as many difficulties, and to produce as droll results. Austrian-English is not less wonderful. What could be the exact meaning of George Hartl & Son, of Vienna, when they distributed a notice that they manufactured "Utmost-purified-cocos-nut-oil-soda-soap (inodorous) white and red, in four angle-tiles, hollow pressed in satin etiquettes in carts?" What are satin etiquettes, and how do they come to be in carts in Vienna? Then, again, what eccentricity was meant by "two sleeping childs," manufactured in soap, and an "Amour with arrow?" MM. Topart, Brothers, Paris, attested that they could make "imitation *real* pearls and corale." M. Descole, Paris, and M. Galopin, Paris, had both been vanquished by the intricacies of number, and announced, respectively, that they are lamps manufacturers, and possess lamps warehouses. And why did M. Boissoneau, *ocularist* of the French army, in a handbill, which we have not yet laid aside, illustrated by the head of a gentleman with a bandage over his right eye, and the head of a lady, with a bandage over her left eye, disturb our fixed ideas on transubstantiation, by declaring that he would be himself on the 1st and 2nd days of the months of June, August, and November, leaving us to understand, darkly, that in the intervals he would be somebody else? A reference to a collection of these ephemeral productions shows us curious facts bearing upon the growth of language. A Baltic *savan*, S. Hestermann, Altona, advertising his "telluriums," writes with a wording of our tongue that the Danes would have found current here a thousand years ago. The story he tells is an old, old tale—oft told—his are the real telluriums, the best embossed globes, all others are spurious. "In the interest of the public I warn against those telluriums turned by means of strings and chains; they give way very soon, and the mechanism stops for ever. I speak from my own and other experiences dearly bought." His embossed earth globe "very practicable and price-worthy," may be bought in various sizes for sums varying from 1*l.* 5s. to 50*l.*, "paid in cash." Mr. Hestermann would not like to be paid, we may infer, in Topart's imitation real pearl beads. How confiding is Joseph Piney, machine builder, at Abilly. Let us read what he calls his "note on his exhibition and workshops." He writes in the third person. "Between 1855 and the present day M. Pinet delivered 4,500 horse-gears, 4,500 thrashing-machines, 500 winnowing machines, a great number of hydraulic motors, transmissions, &c. The yearly amount of affairs is of 32,000*l.* The number of workmen is about 300." The number of gold, silver, and bronze medals M. Pinet has obtained he tells us is ninety; and besides this almost incommoding accumulation of distinctions, he received the cross of the Legion of Honour as agricultural implement manufacturer in 1860. What more can we want to know about M. Pinet? Here is a specimen of long-worded Austrian-English. It is a large blue prospectus about F. J. Kwizda's Viennese Cattle Powder, which has been used in the Royal Prussian stables with a result, says a testimonial from the head horse-doctor thereof, that *corobe-rates* all that has been said in its praise. It is called the Alimental-sanative Cattle-powder. This wonderful powder "removes all miliary fevers, lacteous tumours, inspissation of the milk, by its use the gourd-worm or fluke, as likewise all emphysematous appearances are ever rarely or ever met with in cattle." A variety of it called the Anti-sphacelous-swine-powder has been used with similar success for all diseases in Tigs—the Viennese English, we presume, of Pigs.

Here is a more unexceptionable specimen of Austrian-English in the prospectus of the "Zoolog.—Botanical Society of Vienna. The universal Exhibition, to be opened at London in the course of the present year, being intended to give a conspectus of not only of industry, but also of intellectual pursuits through the whole civilized world, the above-named society thought it perfectly adequate to give notice of their existence and activity, the society's earnest, although unassuming endeavours to promote and diffuse knowledge of natural science, making it their duty to give the greatest extension possible to their scientific connexions. The following brief exposition may give an idea of the society's origin and tendencies. The science of *an*organic nature having been endowed with a dignified and permanent centre of union by the foundation of the Imp. Geological Institute of Vienna, the weekly meetings of friends of Natural Science in this town came to their end; so that organic Natural Science, especially Zoology and Botany, fell back again into their former isolated situation. Some zealous friends and votaries of these sciences met on April 9th, 1849, with the purpose to devote any intellectual and material means in their power to the diffusion of both these branches of organic natural science, by laying the foundations of a society intended to promote their aims by a national museum, distribution of zoological and botanical specimens among establishments of instruction and intercourse by correspondence and exchange of publications with scientific institutions in the widest sense of the term. Presently the society numbers 1,010 Fellows. The annual contribution for every Inland-fellow is 4 Austrian florins [about eight shillings], for which sum he is entitled to receive a copy of the publications of the Society. Foreign-fellows are *free* from contribution; they may, however, claim a copy of the Society's publications by paying merely the amount of an annual contribution." This is such a different aspect of Viennese life to that with which we are, nationally, familiar, that it is pleasant to dwell upon it, and to know that in doing so we may be the means of increasing the numbers of the "Foreign-fellows" so ambiguously placed on the free list. Danish English is excellent. Here is a Danish prospectus which recalls the cool, sea-green, almost grotto-like effects produced by displays of suspended maps. It relates to the execution of an Atlas of Denmark, on a scale so large that all the smaller objects in the country, such as estates, houses, churches, lighthouses, milestones, may be easily found, unobscured by the larger objects, such as woods, market towns, bogs, &c., by L. Both, topographer. It is to be lithographed by A. Bull, and published by Chr. Steen & Son, Copenhagen. The typographical division of the Danish state, notwithstanding annual aid from the State, has been for twenty years at work upon a similar atlas, but up to the commencement of the present year only one-eighth of it has been completed. The Government having liberally allowed these surveys to be taken as the basis for the proposed atlas, the enterprising L. Both hopes to accomplish his task in two years. To return to English-French. Koch, cabinetmaker and *manufactory* of articles for photography, repeats over and over again, only varied by dimensions and prices, the following cabalistic announcement:—"Black Room for 27 and 33 ports id and vues and Latter end broken Sqes rooms 8 f to more." What can be the interpretation thereof? Doubtless the "inland-fellows" who have carried away our British-French will have their laugh at us too. We noted that the French and Italian advertisements of W. Boulton & Sons, needle manufacturers, were corrected with patches that covered the errors of "printers."

It is not solely the mistakes in the international advertisements that render them curious. Messrs. Powell, of Whitefriars, append an advertisement to their prospectus that appeared in the *Tatler*, August, 1710, which carries us back to those wit-abounding, coffee-house congregating and tavern-haunting times:—"At the Flint glass-house in White Fryars near the Temple are made and sold by wholesale or *retale* all sorts of Decanthurs, Drinking Glasses, Crewets, &c.; or glasses made to any pattern of the best Flint, at 12d. per pound; as also all sorts of Common Drinking Glasses and other Things made in ordinary Flint Glass at reasonable rates." Messrs. Defries, Houndsditch, circulate a notice of their mirrors for the palace of the Sultan of Turkey, that reads like a page from one of the thousand and one tales of Scherarzade. Each mirror is to consist of a thousand prisms, and to be 15 feet high by 8 feet wide; and two of the principal saloons, those overlooking the Bosphorus, are to have four mirrors in each of them. A hundred branched-light is to burn before each mirror. Could Aladdin have found more gorgeousness in the jewelled cave into which he descended? Here is a sad-coloured contrast to this Oriental grandeur in a hand-billette, that should be charitably circulated all over the world. "When you want brushes, mats, or baskets, buy those made by the blind, which are sold at the depôt of the Association for the Welfare of the Blind, 125 and 127, Euston-road, London, N.W." A French book of 76 pages, on sanitary perfumery, tells us a few French secrets. It insidiously blames the constant use of *cosmetiques* as the cause of the too prevalent paralysis, and chronic nervous disorders, and recommends the perfumery of M. Arnault, *pharmacien-chimiste*, of Paris and Brussels, as alone safe to use. The *crême de paraffine*, composed of paraffine, oil of almonds, and rose-water, is the softest, freshest, most unctuous cold cream in the world; his paraffine soap for the beard, his paraffine cosmetic for moustaches and *les favoris*; his paraffine mixture for the lips; his paraffine *Oléo*, perfumed with roses, violets, acacias, pinks, jasmine, and vanilla for the hair, are made from sanitary *formules*, which elevate cosmetiques from a cause of ill to be positive benefits,—perhaps. Writing of "Mossoo," as we see him in Leicester-square, it has been the mode to invest him with a strong perfume, which wits have, too precipitately, attributed to unwashed linen. After reading the disclosures of the *pharmacien-chimiste*, we must take stale cosmetics founded upon a basis of paraffine into account. These are samples only of a growth of verbiage over the surface of the great show, that may be considered, perhaps, in a century to come, more indicative than anything that was there. Should we have made no note of these things?

MR. COCKERELL'S TESTIMONIAL.

On New Year's morning the pleasing task was performed of presenting to Mr. Cockerell, R.A., the address voted to him by the Royal Institute of British Architects on the occasion of his retirement from the presidency of that body. Owing to the state of health of Mr. Cockerell, the deputation of members was limited in number to Mr. Tite, M.P., his successor in the presidency; Professor Donaldson, senior vice-president (of last year); and Professor Kerr, honorary secretary of the Testimonial Committee. The address has been written and illuminated on a series of vellum pages, by Mr. Owen Jones; and the long list of signatures of members of the Institute, of all grades, follows on similar sheets, with illuminated borders; the whole being arranged for binding as an album *d'honneur*. As the contributors will, no doubt, in due time have an opportunity of seeing the work for themselves, it is enough to remark at present that Mr. Cockerell expressed, together with his high appreciation of the kindness of the Profession, his great admiration of the beauty of the gift. The deputation had also the pleasure of intimating to Mr. Cockerell that the portrait painted by Mr. Boxall, A.R.A., for the Institute, is ready for final completion so soon as the artist returns from a visit to the south of Spain.

The text of the address is as follows:—

"To Charles Robert Cockerell, Esq., R.A., D.C.L., F.R.I.B.A., late Professor of Architecture in the Royal Academy of Arts; Royal Gold Medallist and late President of the Royal Institute of British Architects; Associated Member of the Institute of France; Chevalier of the Legion of Honour; Member of Merit of the Pontifical Academy of St. Luke at Rome; Honorary Member of the Royal Academy of Fine Arts of Bavaria,—of the Royal Academy of Denmark,—of the Academy of Arts of Genoa,—of the Archæological Society of Athens,—and of the American Institute of Architects; Associate of the Royal Academy of Belgium; Member of the Society of Dilettanti.

DEAR SIR,—Upon the occasion of your retirement from the office of PRESIDENT OF THE ROYAL INSTITUTE OF BRITISH ARCHITECTS, we deem it our duty as the Members of that Body to place

on record the very great satisfaction which your Presidency has afforded us.

When the demise of our first President, the late EARL DE GREY, brought to a close the lengthened period during which his Lordship had so worthily occupied the chair, the unanimous voice of the Institute, in acknowledgment of your pre-eminent merits as an Architect and as a Promoter of Art, called you to take his place.

The same unanimity marks our regret that the period for your withdrawal has arrived.

It is with much pleasure that we avail ourselves of your permission to place your Portrait in the Rooms of the Institute; long to remind us and our successors of that Dignity and Courtesy, those resources of Knowledge and graces of Character, by which you did honour to the highest office in our gift.

Although now retired from those professional labours which have gained you so many trophies of success, we hope to enjoy the frequent pleasure of seeing you amongst us; and still more we trust that England may long have the advantage of including in the number of her artistic counsellors one whose reputation is so long established and so widely spread.

We remain, Dear Sir, very sincerely yours,
WILLIAM TITE, President."
&c. &c. &c.

FROM PARIS.

THE last report of the Prefect of the Seine contains some interesting information. The quantity of water derived from the Seine for the use of the town of Paris, which was five millions of mètres cube in 1855, has now increased to fifteen millions of mètres (the mètre cube being 1,000 litres, or 220·10 imperial gallons). By the extension of the hydraulic *reseau* it is expected that *borne-fontaines* will be established in the principal streets of Belleville, Montmartre, Batignolles, Passy, Auteuil, Vaugirard, Petit Montrouge, and the Gare d'Ivry. The waters of the Canal de l'Ourcq have been already conducted as far as Grenelle, and below Vaugirard. The service of lighting the streets, composed of 21,248 burners at the time of the annexation of the suburban communes, now consists of 23,315 burners. This number will be increased to 23,515 next year. The group of sewers and water-courses has been considerably augmented: the main channel of the boulevards, prolonged from the Rue Louis le Grand to the Boulevard de Sebastopol, will receive, in 1863, one of the principal arteries of the distribution of the water supply; so that the ancient conduit of the Seine waters, whose repeated leakages have caused so much trouble and danger, will be no longer requisite. Owing to the works executed in the main sewer of the Boulevard de Sebastopol (right bank), the superabundant waters of the Canal Saint-Martin, formerly allowed to run to waste, are enabled to be conducted to the Egout des Quais, in which an economical system of waggons and boats has been organized to transport the mud from the Boulevard de Sebastopol and the quays, as far as Asnières. In the quarters of the Faubourgs Poissonnière and Montmartre, the works of sewerage have been executed with a view of preventing the recurrence of those overflows and inundations of rain water which caused great damage in showery weather.

On the left bank of the river the most important structure is the tunnel of Saint Victor, which has been constructed to conduct the river Bièvre into the Seine, at a point below the Chaillot waterworks.

In the suburban zone the principal ramifications of the drainage system are being laid down. The most important "collector," that which is to supersede the insufficient sewer of the Rue de Flandre, is already in a great portion completed; and henceforward the quarters of the Combat and the Quai de Jemmapes will be also free from disastrous inundations during the rainy season.

The neighbourhood of the Chemin de Fer de Ceinture, at Auteuil, has been completely drained; and on the left bank the Rues de Vaugirard, de Sèvres, de la Chaussée, du Marne, and du Transit, have been thoroughly cleansed by the same system.

Consequent upon the demolition of the Pont Louis Philippe, the reconstruction of the Quai Napoleon was commenced, and is now completed: the face-wall in continuation of it has been likewise terminated, and the finishing touch is being given to this inclosing quay-wall of the cité, by the Quai de l'Archéveché, of which the last portion is in hand. The conclusion of this work happily coincides with the completion of the restoration of the cathedral of Notre Dame, so that nothing will remain much longer to prevent this thoroughfare, so long blocked up with materials, &c., from being again opened for circulation.

The Quai de l'Archéveché stands on the site of a portion of the ancient ramparts of the cité borders, on the south the lands formerly occupied by the palace, at first episcopal, but subsequently archepiscopal, of the diocese of Paris.

In the first court of this palace were held, besides the ecclesiastical tribunals, those of Monomachia, or judicial duels. In another court, between the great sacristy of Notre Dame and the Episcopal chapel, was the Archbishop's Prison, one of the most antique as well as the most deadly of Paris: it contained *oubliettes*, humid and obscure cells, in which thousands have perished unrecorded and forgotten.

Near this was also the Prison of the Chapter of Notre Dame, where the canons incarcerated, *pêle-mêle*, in 1252, the inhabitants of Chantenay who refused to pay some new contribution that the chapter had levied.

Queen Blanche, the mother of Saint Louis, soon apprised of the situation of the unfortunate peasants, sent a request to the chapter urging them to set the prisoners at liberty, and offering her own security for the payment; but their answer to the Queen-Regent was to the effect that no person had a right to interfere in their affairs; and, to show their increased insolence, they seized the wives and children of those already confined, and added them to the number, *in heaps*, as the space was confined. The Queen, roused with indignation at such cruelty, went at once in person to the very doors, caused them to be broken open, and rescued the inhabitants of Chantenay, who, half suffocated, and fainting from inanition, fell at the feet of the Queen to implore her protection against their persecutors. (*Vide* "Histoire du Diocèse du Paris," par l'Abbé Lebreuf.)

It was in the grand hall of the palace above mentioned that the National Assembly held in Paris its first *séance* after its return from Versailles (19th Oct., 1789); and it was there, also, that the possessions of the clergy were declared the property of the State.

With the exception of the statues destined for the decoration of the new terminus of the "Nord" Railway,* the elaborate, though massive, ornamentations of the exterior are in a great measure completed: the extreme pavilions have been completely disengaged of their scaffolding; as likewise the intermediate galleries; so that the architectural features of the edifice can be appreciated. The gigantic series of arches of the central pavilion, the tall fluted columns, and the immense pediments surmounting the whole, are now entirely visible. The bold outlines of this façade, its noble width, and its sobriety of detail, contrast forcibly with the general style of the Paris edifices in this epoch.

Of the twenty-three statues which are to complete the decoration, the nine principal ones are,—the town of Paris, at the summit angle, due to the chisel of M. Caveiller; over the four pilasters on the left side, those of Brussels, by M. Jouffroy; St. Petersburg, by the same; Amsterdam, by M. Gumery; Frankfort, by M. Thomas. On the pilasters on the right side we have London and Vienna, by M. Jaley; Berlin, by M. Péraud; Cologne, by M. Moreau. The fountain statues in the arcades are Amiens, Lille, Beauvais, Cambray, St. Quentin, Boulogne, Compiègne, Rouen, Arras, Laon, Calais, Valenciennes, Dunkirk, and Douay. All of these are at present in temporary aërial workshops or *logettes*.

On the keystone of the principal arch a head of Mercury represents "Commerce," and having for *pendans* two medallions inserted into each pier, right and left, representing Jupiter and Neptune; while, in the pavilions of the angles, the corresponding panels will contain the emblems of fire and of water, the two bases of steam locomotion. The tympana of the two lateral entrances of the departure court are also to be ornamented with sculptures, the principal subjects being—in one, Papin; and in the other, Watt.

The ground occupied by the new terminus is said to be about 40,000 square mètres, or 9 acres, 3 roods, and 14 perches. The façade is 180 mètres (590 feet 7 inches) in length. The station is in the centre of the façade, and comprises a vast hall 70 mètres (229 feet 8 inches) long. This will be covered by a roof sloping on each side, and be divided into a nave of 34 mètres wide, and two side aisles of 18 mètres each; the separations being made by cast-iron columns, which bear a portion of the weight of the iron roof.

The Paris Chamber of Commerce is now erecting a large building at the corner of the Avenue Trudaine and the Rue Bohard de Saron, intended, according to *Galignani*, for a commercial school. The building will contain four class-rooms, each capable of containing 100 pupils; three amphitheatres for lectures, the largest of which will hold 250 persons; a spacious drawing-school, a gallery of natural history, and a library. The whole building, including the courts, will cover a space of about 3,000 square mètres. This establishment is especially intended for the children of the working classes, who will there receive, in a four years' course of studies, at a very low charge, an excellent business education for clerkships, &c. The course of study will include modern languages, mathematics, physics, drawing, natural history, geography, &c. In the evening there will be classes for adults.

* See page 603, vol. xx.

WORKS IN MELBOURNE.*

THE event of the moment has been the opening for traffic of the great trunk line as far as Castlemaine and Sandhurst. The line cannot yet be said to be completed, and hence many of the excursionists had to suffer great inconvenience; and not a few amusing incidents occurred to render the opening day to Sandhurst permanent in the recollection of the guests. The line was opened a certain distance in April last, so that the portion opened is about fifty-seven additional miles. In this space some of the greatest engineering difficulties have been met with;—two tunnels, each nearly a quarter of a mile long, besides several fine viaducts. Although the whole of the works have been executed in the most substantial manner, yet it does seem that some at least of the gradients need not to have been so steep; Sandhurst being situate beyond the dividing range that had to be crossed; and this is done at an altitude of 1,950 feet, within a distance of 45 miles of the sea level. One viaduct is of five spans, 130 feet each, and 120 feet high. This is over the valley of the Back Creek. That over the Coliban consists of five arches, each 60 feet span, and 70 feet high. The openings were duly attended to with triumphal arches, banquets, balls, &c., according to the time-honoured custom. The line to Castlemaine and Sandhurst will not be fit for goods traffic much before January in the new year. In the *Illustrated Post*, sent herewith, will be seen a view of Castlemaine on the opening day there. Castlemaine itself is a good inland town, possessing some fine public buildings. Sandhurst is not so attractive in appearance: probably it was seen at a disadvantage. The immense crowds which went thither by rail and otherwise, and the dust and heat, rendered the place almost insufferable to a stranger.

And, before quite leaving the railway inauguration, it may as well be noted that his Excellency the Governor has been in great requisition for the laying of foundation stones for churches during the last month. On the 20th of last month Sir Henry Barkly officiated at the laying of a foundation stone for a new Independent Church in Collins-street, Melbourne, for which Mr. Thomas Watts is architect. The notices in the local papers say it will be in the "Roman Corinthian style," the tower will be 100 feet high, and accommodation will be provided for 400 persons. The total cost will be 5,000*l*. Then, again, during his visit at Sandhurst, he laid the foundation stone of a new Wesleyan Church in Forrest-street, which will cost about 3,500*l*.; and the next morning he performed the same ceremony for St. Peter's (Church of England), Eaglehawk, Bendigo. On all occasions he was presented with handsome silver trowels suitably engraved. As his Excellency has frequently during his stay amongst us been called upon to perform this office, and has on each occasion been presented with silver tools for the purpose, it is to be feared that the freight for his effects will be considerably increased when he takes his departure.

In the *Illustrated Melbourne Post* before alluded to will be found several illustrations which may be interesting. One of Melbourne-street architecture,—a building erected in 1858 and 1859, by Mr. Edward Sayce, from designs by Mr. T. J. Cronde, at a cost of upwards of 4,000*l*. It was built for incoming tenants, who took a lease for ten years, at 1,300*l*. per annum; but having lately failed, the landlord has been compelled to

* Our correspondent's communication was saved from the wreck of the *Columbo*.

subdivide and let to various parties. A new insurance company (the Australian Alliance) started under the most auspicious circumstances, has secured the corner shop; and it is understood that the collective rent-roll is now little short of 1,000*l.* There is rather a singular history about this property that may not be uninstructive to the readers of the *Builder*. The ground landlord, a Mr. T. B. Payne—so rich, it is said, that his greatest trouble is, that he has some 60,000*l.* hard cash for which he cannot find a satisfactory investment—leased the property to Mr. Edward Sayce for twenty-one years, at, say 200*l.* per annum, one of the covenants in the lease being that the premises should be insured in the name of the ground landlord. In the course of a few years Mr. Sayce availed himself of some share in a building society of which he was a shareholder, and built a store upon a portion. The rules of building societies requiring that these premises should be insured in the names of the trustees, Mr. Sayce insured *only* in the name of the trustees, and this had been done innocently for years, and the property became cleared from the building society before the breach of the covenant was discovered; when, although the ground landlord had suffered no harm, he stepped in and asserted his prerogative by compelling Sayce to enter into a new lease, and to spend no less than 4,000*l.* upon the ground. It is considered a very nice point; and the opinion of several eminent counsel here and in England has been taken against Mr. Payne. Yet it is so nice that Mr. Sayce would not try it in court.

The Patent Septaria Cement Company have just placed a sample of their cement in the market, and the trials given are highly satisfactory. It will be a great boon to the colonies, as it is with great difficulty that the imported article can be received sound, and consequently many good jobs have become prematurely decayed.

BRONZING CAST IRON.

THE ornamental cast-iron balcony which decorates the façade of the Théâtre Français in Paris* has been the object of a new application. It has been covered with a coating of electro-metallic paint, which gives it an aspect of bronze, the tone being something between the artistic and the antique green. Galvanoplastic copper reduced to an impalpable powder is the principal substance employed in this system, of which the above balcony affords the first specimen. The paint is laid with a brush upon the cast-iron, which has previously received a protective coating, and it is bronzed afterwards by a chemical process connected with galvanized coppering. It is said that the results of experiments which have been carried on for as long as three years past, promise important advantages from the use of the process. It is very different from the usual bronze powders, which are subject to considerable alteration from atmospheric influences, as it is reported not to have suffered in the least from continued exposure.

DESTRUCTION OF THE PLYMOUTH THEATRE AND ROYAL HOTEL.

A FIRE broke out quite early on Tuesday morning last, in the fine pile of buildings known as forming the Royal Theatre and Royal Hotel, Plymouth, and may be said to have destroyed it. It was built by the corporation in 1813, at the cost of 60,000*l.* If we mistake not, the late Mr. Folston was the architect. The north front is 275 feet long, and has in the centre a portico of the Ionic order, under which are the main entrances to the theatre and Assembly-rooms. The hotel occupies all the eastern front, and has also an Ionic portico. The columns are left standing, but the roof that attached them to the building fell in early. In the interior the whole of the grand entrance to the boxes and the upper boxes, as well as the vestibule of the theatre, have been destroyed; also the grand lobby entrance and the staircase leading to the Assembly-room.

The interior of the theatre remains, but all the decorations and fittings are demolished. The lessee, Mr. Newcombe, had just completed alterations and repairs in the theatre costing 3,000*l.*, and had obtained a renewal of his lease for fourteen years. He is not insured. The house had been crowded to see the pantomime, and the manager, after the most careful examination, went home; so satisfied, nevertheless, that something was wrong, that he had opened the door of his house to return to the theatre when a fly came up to the door. "I know what it is," said Mr. Newcombe; "the theatre is on fire." There was great difficulty in obtaining water. No one knew anything about it, and the plug-keys were nowhere.

It has been mentioned, and is worth note, that the party-wall between the theatre and hotel does not go through the roof, and so the fire passed from one building to the other.

* See p. 603, Vol. XX.

DESTRUCTION OF CHESTER TOWN HALL BY FIRE.

THIS old and interesting building has ceased to exist. The Exchange and Town Hall formed a spacious pile, erected in 1695-8, and embellished during the mayoralty of the Earl of Derby in 1702. The structure originally rested on stone pillars, admitting of a public thoroughfare beneath; but in 1756 the west side was filled up with a row of business premises (which were subsequently converted into police offices and bridewell), the alteration being made to increase the general stability of the edifice. The Exchange had from time to time been improved; and a few years ago the sum of 2,000*l.* was expended in renovating and decorating the building. The fire broke out in the council chamber. Before the efforts of the Fire Brigade could be brought to bear upon the roof, it was one mass of flame, and gave way in a very short time. The adjacent cathedral and bishop's palace, as well as the new Market Hall, were also exposed to danger. The Exchange was surrounded with portraits of civic celebrities. There were also numerous portraits of benefactors to the city charities, with an enumeration of their several legacies. Almost all the paintings are lost or injured. A figure of Queen Anne, fixed in the south side of the building, is preserved. The Exchange was insured for 5,000*l.*

THE WEST LONDON MAIN DRAINAGE.

THE plan proposed by the engineer of the Board of Works to pass the drainage of a large part of the western metropolis to a space of open ground, near Cremorne Gardens, and, after a species of deodorization, to the Thames, has just now caused much surprise, although announced long ago. The district which it is proposed to drain in this way, contains a large and rapidly increasing population. The space will yield 1-11th part of the metropolitan sewage, amounting to about 16,000,000 gallons. This it is proposed to collect into reservoirs of two acres in extent at the spot above mentioned, and deodorise with perchloride of iron. In connection with the subject the medical officers of health of the metropolis have held a second meeting, which was presided over by Dr. Thompson, of Marylebone, when a motion was carried, that in the opinion of the Association of Medical Officers, the proposed deodorization of the sewage of the western district of the metropolis, and its subsequent discharge into the river Thames, will be ineffectual in its operation, pernicious in its effect upon the river, and subversive of the principle upon which the interceptive schemes were originally based. If with our increased knowledge a plan had been proposed to pass the sewage to some of the wastes farther west, with a view towards making it useful, the plan might have been more readily accepted. The engineer will find it desirable to give a full description of the plan intended to be pursued.

RESTORATION OF THE CHANCEL OF DARTFORD CHURCH, KENT.

THE parish church of Dartford was re-opened on Tuesday, December 23rd, after having been closed for some time past during the restoration of the chancel. The chancel of Dartford church, without pretension to any beauty or delicacy of detail, is unusually well proportioned, spacious, and lofty; but before the late restorations, the fittings and arrangements were such as to rob it of its due effect in the most complete manner. The arch, reveals, and cill of a grand east window (the work of Haymo de Hethe, Bishop of Rochester, A.D. 1333) still remained, but the tracery had disappeared; the opening was partly built up; and a squat window, with a four-centered head, had been substituted. The usual wooden altarpiece with cornice, pediment, and pilasters, appeared above the communion-table. The space within the rails was narrow and confined, and was further cramped by two large tombs, one on each side.

The roof, formed of pairs of crossed and braced rafters without principals, had a lath-and-plaster ceiling, except a portion at the east end, which was ceiled with painted deal, divided into panels by a moulded rib, having carved oak bosses of good Late character at the intersections. The only seats in the chancel were some rows of open benches, of mean and inconvenient form, facing westward, and four high pews, part of two considerable clusters which had formed round each pier of the chancel arch. In one of these clusters stood the pulpit, reading-desk, and clerk's desk. The arch itself was extremely low, cutting off all view of the chancel roof from the nave: it was also segmental and partially crippled. Whatever its effect might have been when the rood-screen and rood existed, there is no doubt that in its late form it was extremely ugly and inconvenient for sight and hearing: with this view the vicar and churchwardens (having taken professional advice as to the safety of such a course) cut up the opening, and substituted an arch of suitable proportion, shortly before the present works were taken in hand.

The whole area of the chancel has now been cleared out. Massive oak seats have been arranged stall-wise, leaving a wide central passage, and ample space eastward. A new prayer-desk and lectern have been placed on the south of the chancel arch, and the old Elizabethan pulpit—a good specimen of its kind, has been carefully restored, and slightly lowered, but still remains in nearly its original position. The inappropriate font, which stood in the south aisle of the chancel, has been replaced by one of suitable character, near the western entrance. The chancel-floor is laid with Minton's tiles. A new east window has been inserted, filling up the whole of the original opening. In taking down the modern filling in, fragments of tracery of two previous windows were found, but nothing sufficient to render possible a restoration of either. An old view of Dartford church shows what was said to be the original window of Haymo de Hethe, but it is too rude, and evidently incorrect to be taken as a guide. The architect, therefore, thought it better not to attempt a restoration, but to make a new design, with tracery symbolizing the dedication of the church to the Holy Trinity. Below the east window is a reredos of incised alabaster, and inlaid marbles; the rest of the east wall below the window-cill being faced with chalk, firestone, and encaustic tiles. By the removal of the two large tombs from within the altar-rails, the remains of a credence niche and double aumbry were brought to light on the north side, and a piscina on the south; besides a large arched recess occupying the position of a sedile; but which may, perhaps, be "the sepulcre," of which record exists. It is said to have been in the north wall, but a careful examination on removing the plaster, failed to discover any traces of its ever having existed there. The late vestry doorway which cut into the arch of this recess in an awkward manner, and interfered with the altar-rail, has been moved into the south aisle, and the arch restored.

All remains of ancient work, windows, and arches which have been built up; niches, steps, and doorways to rood-loft, &c., have been carefully opened and preserved. The old ceiling has been removed, and the fine oak rafters exposed, repaired, and renewed where necessary. The roof is now ceiled between the rafters, and decorated with colour.

The tomb of Sir John Spillman (said to have been the first papermaker who settled at Dartford), which formerly stood within the rails, has been placed under the arch of Becket's Chapel, and the sides closed with a light metal screen. All remains of ancient brasses have been affixed to the walls, as near as possible to their original position. In the body of the church the stonework has been cleaned, and the walls replastered, but the high pews and galleries remain for the present, as well as the modern roof and ceiling, and the mutilated corner of the south aisle, which was cut off, and neatly rounded in brick, to improve the street in the old coaching days. It will thus be seen that much still remains to be done.

The whole of the woodwork in the chancel is of oak, and has been executed by the Messrs. Melton, of Dartford. The carving is by Mr. Earp. The mason's work has been executed by Mr. Miles, and the plastering by Mr. Bolt, both of Dartford.

The east window is filled with stained glass, by Messrs. Heaton, Butler, & Bayne, who also executed the reredos, and a memorial window in the south aisle. The metal work, including the gas

standard, altar-rail, and screen before mentioned, is by Messrs. Peard & Jackson.

The cost of the restorations has been about 2,000*l.* The architect was Mr. Arthur W. Blomfield; clerk of the works, Mr. G. M. Bates, of Stevenage.

THE STRAND.

THE "COURIER" OFFICE.

IN a late number of the *Builder* you state that, in a room of the first-floor of the house No. 345, Strand, "at one time the office of the *Courier*, Lord Palmerston is supposed to have made his maiden speech." In this, I think, you are mistaken. The house of which you speak was the office of the *Courier* only in its latter days, previous to which it was in a house further westward. In a little book, "A Companion to the Theatres," which I wrote in 1829, in the frontispiece, the *Courier* office is shown to be the house east of the English Opera-house entrance. The *Courier* house front, which I remember many years, was of Egyptian character in the lower floor, and is shown in Cooke's nice print, "Old Exeter Change." It was, I think, removed on making Wellington-street. In the "Picture of London" for 1810, it is stated to be No. 348, Strand. Still, I am not certain that this was the Palmerston house; for the *Picture of London*, 1806, among the evening papers, gives, "*The Courier*, opposite Somerset House." Now, here are *three Courier* offices; and, as Lord Palmerston began his political career in 1806, his maiden speech to which you refer may have been made in the last-named house: the *Courier*, indeed, seems to have changed its office as often as its politics. Excuse this "cartrope" note; but identification of London localities is a dear subject with your old reader,

Gray's Inn. JOHN TIMBS.

"THE *BUILDER'S* BREAKFAST."

AN "unemployed workman" who regards "The *Builder's* Fire" as now "an established institution," proposes that another of our suggestions should be called "The *Builder's* Breakfast," as being a cheap, good, and fitting adjunct to "The *Builder's* Fire." Though evidently an Englishman, he becomes quite eloquent on the merits of Scottish oatmeal porridge;—or rather of a new formula of his own for the use of oat-grits not quite ground to meal; as a nutritious, pleasant, and wholesome breakfast for the working man, whether employed or unemployed. He says he cannot "stomach" the real Scottish porridge (though Her Majesty relishes it); but he takes a fourth or a third of a pint of oat-grits (cost 1½*d.* or 1¾*d.*) and puts it into a quart jar, which he fills up with water and sets by the fire (in the oven or on the hob) for six to twelve hours, when it forms "a beautiful thick farinaceous substance, very palateable; particularly so if you can give it a dusting of sugar and take it with a cupful of milk." This, he says, forms "a breakfast fit to set before a king." The usual mode of making porridge in Scotland is different. The oatmeal is simply stirred into boiling water, and boiled for half an hour till thick and pasty, a *quantum suff.* of salt being put in; and it is supped,—or eaten, as an Englishman would say,—with milk; or failing that, with treacle, sugar, or beer. It would be well for an English cook, however, not to stir the dry meal into the hot water, otherwise "knots," offensive to the taste of many, though purposely produced from liking by others, may be the result. This is easily avoided by first moistening the meal with cold water; and then pouring it, by degrees, into the hot water; stirring meanwhile with a "porridge stick" or long spoon; and the stirring must be kept up every few minutes, till the porridge be fully cooked, otherwise it may "singe," and acquire a disagreeable flavour. Oatmeal, we may add, also makes a cheap and excellent substitute for more costly "stuffing," as in a small "flap" of mutton or veal. It is first mixed with a little finely-minced suet and onions, peppered and salted, and then moistened with a little water. Those who once know the savoury taste of such stuffing, are likely to stuff themselves with it again and again. Oat cake, such as the Princess Alice begged from a cook in "the land o' cakes," makes a capital lunch, with a little bit of cheese, and is much used in Scotland, in preference to wheaten bread itself. It is simply made with water and salt, rolled into very thin paste, the thinner the better, and cooked on an iron plate, or in a hot oven. In buying oatmeal in England it ought to be tasted; and if bitter it is bad and should be rejected.

ARCHITECTURAL INSTITUTE OF SCOTLAND.

THE council, in their report which was read and approved of at the annual general meeting of the Institute on the 5th of December last, state, with reference to the endeavours they made to obtain such a representation of the state of architecture in Scotland, at the International Exhibition, as might be worthy of the country, "that complaints were made by exhibitors that the Scotch drawings were not favourably placed. Remonstrance was made with those in management in London, but without effect; and it will be for consideration, upon any similar future occasion, what steps shall be taken to secure for Scotland an equality of position with England."

Some misconception on this head must surely exist.

The following is an abstract of the treasurer's accounts with the architectural Institute of Scotland, for the year ending 31st October, 1862.

Charge.

1. Balance—			
In treasurer's hands at close of last account	£0 14 6		
In account with British Linen Company at ditto	99 13 4		
	£100	7	10
2. Annual subscriptions, 1861–62, received	105	0	0
3. Arrears of former years' subscriptions received	6	6	0
4. Interest on account with British Linen Company to 15th April last	3	2	6
5. Special fund for endowing a chair of architecture, consigned in British Linen Company's Bank on Deposit Receipt, at 31st October, 1861 £18 19 3			
Interest thereon, to 31st of October, 1862 0 7 2			
	19	6	5
	£234	2	9

Discharge.

1. Rent, taxes, &c., paid for rooms, 89, George-street, and for meeting in Queen-street Hall	£28	12	9
2. Printing, advertising, &c.—			
1. Printing £26 17 4			
2. Advertising 2 16 0			
3. Periodicals and books for Prizes 17 1 0			
	46	14	4
3. Miscellaneous general expenses, including secretary and treasurer's outlays, postages, carriages, and expenses of collections	15	13	7
4. Subscription for memorial to Prince Consort	10	10	0
5. Amount in Deposit Receipt of British Linen Company, on account of fund for endowing a chair of architecture, dated 31st October, 1862	19	6	5
6. Balance—			
In British Linen Company's Bank, at 31st October, 1862 £111 13 4			
In treasurer's hands at ditto 1 12 4			
	113	5	8
	£234	2	9

THE FILTHY STREETS OF LONDON.

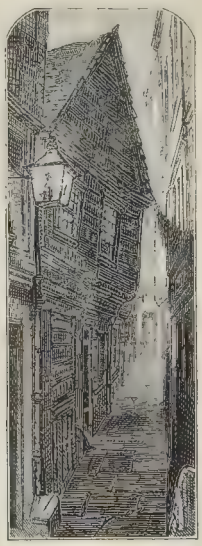
WHEN our army was in Pekin the dirty state of its streets was sarcastically commented on by many a British soldier. We wish a whole army-power of sarcasm could be brought at once to bear upon the abominable filth of the streets of London; for nothing short of that, we do believe, will shame either the authorities or the citizens out of that self-satisfied complacency which induces them even to take a pride in such nastiness, as an unparalleled evidence of "the immensity of the traffic, sir," through their wonderful city. It never seems to enter into their calculating heads that immensity of traffic implies immensity of means and resources, and therefore only renders their filth and their self-complacency under such a state of things all the more disgraceful and abominable. There is really not the slightest excuse for it.

What a subject this is for the contempt of those foreign visitors whose "dirty habits" no one is more ready to sneer at than a Londoner! It is most disgusting to be obliged to traverse his nasty streets. No wonder that leather leggings are becoming universal in such streets and among such mud-larkers!

It is some little consolation, though we believe a very poor and hopeless one after all, that the City police, at least, appear to have at length woke up for a moment to an obscure sense of the nuisance; and have issued a notice to house occupants to cleanse the pavement in front of their respective houses in the City, under a penalty of 40*s.*, according to the City Police Act; but unfortunately the City is but the small core of the vast metropolis; and nothing short of legislation on the subject will be of any use, we fear; if even that suffice for the Herculean work of cleansing out this Augean stable.

HOUSES OF THE DANGEROUS CLASSES.

MANY years have passed since we first pressed on the attention of the public the fact that the extent and danger of the under-currents of London society were not duly known and understood: that lying in the dark shadows of London;—bred in town swamps; and living in the midst of vice, ignorance, dirt, and social degradation, an army of rough and desperate men and women existed, unsuspected and uncared for. They are to be counted in thousands. An execution or a local riot sometimes brings them into daylight and the streets: but at ordinary times they are to be found only where they live massed together, and under such conditions that improvement is impossible. We have shown some of these slums, and how they act on the condition and character of the inmates; the effect on the children born in them; and the danger to all constantly resulting from the existence of such a state of things. From these vice-producing quarters the prisons are supplied, and in these places, when liberated from prison, the convict finds his base of operations in continuing what to him is viewed as the business of his life. These spots, this aggregation, are well known to the police and authorities, and it would seem strange that they should be allowed to remain without some efforts at suppression and distribution.



Such haunts as these, it may be noticed, generally lie in situations which are reached through complicated turnings. Take, for instance, the neighbourhood of Lamb and Flag-court, near the Sessions-house, Clerkenwell-green, where narrow courts and alleys run in all directions, like the burrows of a rabbit-warren, so that the inhabitants have the opportunity of returning to or leaving their homes in many varied directions. Costermongers and others live in parts here, but there are also many inhabitants who have for years past never earned a penny honestly. In such neighbourhoods will be found marine store-shops, the proprietors of which manage their business loosely, and in many cases are receivers of stolen goods. There are also low beer-shops, to which well-known thieves and those connected with them resort, and where *business* is arranged. The management of beer-houses calls for the attention of the Home Secretary.

The large body of people who prey upon the honest portion of the community—the ticket-of-leave men, the returned convicts,—chiefly live in the most wretched homes; and there is every indication that although there may be short and sudden glimpses of prosperity, upon the whole the trade is a bad one, and that after all, "honesty is the best policy." Even in connexion with a successful stroke of business, a chief part of the plunder goes to the receiver, and the remainder is usually rapidly spent in dissipation, waste, and drunkenness.

Many pictures might be sketched in the locality just mentioned, but we will pass on to Argyle-square, King's-cross. At the south-west corner of this square, which is formed of good houses, inhabited by respectable families, there are some narrow roadways and passages which lead towards Cromer-street and Judd-street. Various depredations have taken place around here, and but a short time ago an old gentleman was knocked down in the open street and robbed in the forenoon and the bright sunlight. Since then a policeman has been kept constantly on duty at this point; and the officer will tell the inquirer that there is sufficient need for his supervision, for round about thieves and their companions abound.

After leaving Argyle-square there may be seen an immense cow-shed, which can often be scented from afar, and cannot be good for those dwelling around. Nearly opposite to this is a public-house, and at the side of it are a narrow pathway and a long row of houses, many, if not all of which are inhabited by thieves, and the women, and sometimes children, who live with them. In the morning, and until towards the afternoon, these houses are quieter than those which in other quarters are occupied by working people. Now and then, however, doubtful-looking characters may be seen skulking to and from these houses; but for the chief part the inmates are resting from their unlawful labours. The houses towards the front have a decent appearance, and for the most part the front doors are open. The writer knocked at the door of many rooms, but without receiving any response. Either the inmates had, by some telegraphic communication from house to house, been told that a strange inquirer was in the neighbourhood, or else (the time was between twelve and one in the day) they

HOUSES OF THE DANGEROUS CLASSES.—*Hot-beds of Evil.*

A Narrow Alley in the Coal-yard, Drury-lane.

Barley court. Who sowed the Tares?

were sleeping after the labours of the preceding night.

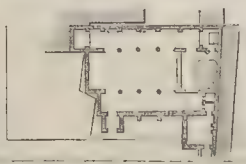
At the time above mentioned one might walk here without suspecting that anything was wrong; but as the evening approaches the dwellers come forth, and towards midnight and late in the morning, this place is a kind of Pandemonium, the women being often more violent and drunken than the men. In dealing with such an evil as this, with a community so depraved, seemingly so irremediably sunk in evil, there is undoubtedly much difficulty. They must have a shelter somewhere; but at any rate great advantage would result from having such a neighbourhood as this, during both night and day, patrolled by the police.

While making sanitary inquiries on former occasions we have visited places without any protection from the police, where neither life nor property was thought safe, and have yet usually met with civil treatment. In a long narrow court in Whitechapel, with a still narrower entrance, the children and others were dying in large numbers from fever; the drainage was shockingly bad, and the people were evidently thankful that inquiry was made with a view towards saving their lives. Many had been robbed and cruelly treated in this court, still a writer for this journal examined cellars and garrets, and other places from which it would have been no easy matter to escape; yet in this instance he did not hear a rough word. He had, before calling, purchased an old-fashioned plaster figure from an Italian, and put it in his coat pocket. After his examination of the houses, one of the occupants presented him with the figure, which had been dexterously extracted from his pocket,—whether as a specimen of skill, or as a hint that the visitor had been treated with a certain amount of hospitality, was not clear.

In the streets leading from Drury-lane there are, as our readers know well, many notorious spots. Amongst these there are, perhaps, none much worse than parts of the Coal-yard,—a place referred to by us some years ago. There, many thieves find harbour. Barley-court and some of the houses adjoining are said to be almost entirely occupied by returned convicts, ticket-of-leave men, and other bad characters, both men and women. During a recent inquest it was stated by an experienced police-officer that Barley-court was one of the worst places in the metropolis. No man could enter it with safety. Not only would he be robbed, but stripped and turned into the street. Evil women and thieves of the worst class resided there. The former were even more desperate than the latter. To say that three or four persons were robbed and stripped there every week was to say less than the reality. Dr. Bennett, the medical officer of St. Giles's Workhouse, corroborated the statement of the constable, and said it had recently come to his knowledge that a man had been robbed in one of the houses and stripped naked, and that the thieves had then rolled a blanket round him, stitched him up in it so that he could not move a limb, and thrust him in that condition into the street, with a large label, on which was written the word "Thief!" pinned over his breast. Surely the allowing of such dens of infamy to exist, in which the most notorious characters assemble for the worst purposes, shows that either the power of the law at present is not sufficient, or that the police are not sufficiently active in dispersing such dangerous communities.

One of our engravings shows a long court in the Coal-yard, which, like the other spots mentioned has several entrances. The width of this court is about 31 inches, and in one part the wooden building very nearly touches the opposite side. Barley-court is near this, and may be reached either from Smart's-buildings, Drury-lane, or other points. We last saw this locality about three in the afternoon, and found the place rather noisy. Women, muddled and tipsy, were singing ribald songs. "What shall I do when I marry a soldier?" and other choruses were taken up by drunken voices. The women here are perhaps more vicious than the men. The people crowded about were more dangerous and savage than a tribe of Caffres.

It is very disheartening to view this class of society; to consider its extent, and the little chance there is of doing good either by punishment or persuasion; and one cannot but admit that this foul blot on the civilization of the nineteenth century has been caused by many years of neglect. Houses, unfit for the occupation of human beings, were left without care or inspection; great districts rose into existence without due provision of schools or churches, and thousands of the metropolitan population were allowed to be born in filth, and reared in ignorance, bad health, and vice. Few troubled themselves to go into those places when the monster, which has become so troublesome, had been allowed to grow to strength. We have now better agencies at work. The ragged-schools effect good, and the Homes connected with them often save those who are on the brink of crime; while the reformatories for those who are young, and have just been convicted of theft, will be the means of training many into industrious habits. A strong effort, however, is needed. The children, in such spots as those we have illustrated, if left to the course of events, can scarcely escape the moral sewer: they will be swept away to vice and crime,—misery and early death. It would be *cheaper* for society to send these children to a first-class boarding school, and put them in a way to be healthy and wise, than to allow them to become, as they probably will, thieves and prostitutes. It is not even a question between prevention and cure. Educate the children downwards to convicts, and cure is very nearly impossible. If you would do anything you must prevent.



CHURCH OF ST. PANCRAS (R.C.), IPSWICH.

THE church, of which we present an interior view this week, has been recently completed from the designs and under the superintendence of Mr. Goldie, architect.

The site offered considerable difficulties, being at the end of a somewhat narrow garden plot: notwithstanding, a commodious edifice has been produced, capable of seating 650 persons, exclusive of standing room, for the sum of 3,400*l.*, including the elaborate altar, reredos, font, benches, organ-gallery, and various fittings. The church is built of Suffolk red brick, with occasional bands of black brick and Whitby stone dressings. The architect has not scrupled to accept the local material, brick, and use it freely internally in the arches and the clerestory string course, avoiding the employment of the more costly stone where possible. Externally the chancel is marked by a lofty *flèche* of wood and lead, with statues of angels of a large size around its base. The coupled pairs of principals shown in our view sustain this feature, and define the extent of the chancel within. The reredos is a lofty composition containing large statues of our Lord and the four Evangelists, under niches, supported by marble columns. Below are patterns of embossed majolica tiles. The chancel is surrounded by a low pierced wall, with red Mansfield stone pilasters. The baptistery runs out at the west end of the north aisle, and contains a carved font with red Mansfield shaft. Mr. Simpson, of Tottenham-court-road, late of Ipswich, was the contractor. The altar, reredos, and font, and the carving about the building, were executed by Mr. Earp with his usual skill.

Church of S. Pancras

Ipswich G. Gothic Arch.

THE NATIONAL PRINCE CONSORT MEMORIAL.

THE designs which have been prepared by a certain number of architects in competition under terms of which we have already spoken, are to be sent to Osborne on the 13th inst., where they are to be arranged for the Queen's inspection.

CHURCH-BUILDING NEWS.

Horton (*Northamptonshire*).—The church here has been re-opened, after restoration, at a cost of 1,700*l*. The aisle has been rebuilt, and also the north side of the nave. The walls are built in the limestone of the neighbourhood and the red Duston stone, in attenuating courses, irregularly banded. The walls are supported by buttresses, with Bath stone weatherings, quoins, &c. The windows throughout the church are of Bath stone, of Decorated character, all varying in design, with respect to the tracery in the heads. The roofs of nave and aisle are executed in pitch pine and Baltic fir. They are boarded on the top of the rafters. The rafters and principal timbers are stained, and the whole is varnished. The church has been entirely re-seated, and the architect has made use of the old panelled work. The tower has been stripped of its stucco and pointed throughout. The stone string-courses and other dressings have been restored, the Italian pinnacles have been removed, and the tower generally improved. The chancel has been remodelled and partly rebuilt. The roof is new, and has several principals, with curved ribs, resting upon stone corbels, carved with natural foliage and figure-heads. A three-light window has been introduced at the east end, and two two-light windows on the south side. All these, together with the three windows on the north of the nave, are filled with coloured glass. Those in the nave have been executed by Messrs. Powell & Sons, of London; those in the chancel by Mr. O'Conner, of London. The east window, by O'Connor, is filled with figures forming two subjects, one being the last event connected with our Saviour upon earth, the other that of His glorification in heaven. The former occupies the lower part of the three lights, and represents the tomb, with the Roman guards, in each of the side lights: in one of the two side lights are the two disciples approaching the entrance to the tomb, which is in the centre light: in the other side light are the three women approaching the tomb in the opposite direction. In the centre light are the two young men sitting at the tomb, arrayed in white. In the upper part of the centre light is a figure of the Saviour, and in each of the side lights a number of the glorified saints. In the tracery of the head are sundry emblematical representations and small figures. The seats in the chancel are of oak. The altar rail is of oak, partly gilded, and was executed by Messrs. Cox & Son, from designs by the architect. All round the walls in the sanctuary, within the altar-rail, is placed alabaster work, inlaid with marble and incised diapered work of various colours. On the south side is a sedilia; and at the east side, under the stone reredos, the alabaster work is continued. In the centre, immediately over the table, is a Greek cross—white, and jewelled with coloured marbles; and on either side of this are the sacred monograms, inlaid in the alabaster. This part of the work was designed and executed by Messrs. Poole & Sons, of London. The churchyard has also received attention. The works in the churchyard have been executed by Messrs. Perkins & Son, of Northampton. The whole of the works have been executed from the design, and under the superintendence, of Mr. C. F. Law, of Northampton. The building works have been carried out by Mr. Wilson, of London.

Ayott St. Peter's (*Herts*).—The church of St. Peter, Ayott, has been rebuilt by Messrs. Bates & Son, of Stevenage, from designs by Mr. T. G. Pearson, of London, architect; and has been re-opened for divine service. The edifice has been entirely altered, and but a small portion of the walls of the former building remain: these are worked into the present and remodelled church. The plan comprises a nave, 15 feet wide and 32 feet long, with side aisles of the same length, and 8 feet 6 inches wide. The chancel is 15 feet wide, and 22 feet 6 inches long, with a semi-circular apsidal end. A vestry and organ chamber are provided on the north side of the chancel; and over these a tower is erected, altogether 72 feet high. The nave and chancel are of equal height, and are not divided by any chancel arch, the object being to give length to the church. The apse contains three lancet windows filled with painted glass, the centre one having "The Crucifixion," occupying the principal portion of it, and the side lights respectively "The Agony" and "The Resurrection;" and above and below these principal subjects are smaller ones, as follows: "The Raising of Jairus's Daughter," "The Raising of Peter's Wife's Mother," "The Entombment," "Christ bearing His Cross," "Raising the Widow's Son," and "The Raising of Lazarus." Below these windows a reredos has been introduced (the sills of the windows being at some considerable height above the floor). The floor of the chancel is laid with Minton's tiles. The entrance of the church is at the west end, through a wide arched doorway partly in stone and unmoulded: the capitals to the columns are, however, carved. Over this doorway is a large circular window, nearly of the full width of the nave, of very simple tracery, but filled with painted glass. In the centre of the window is a majesty, and in the seven compartments surrounding this are figures representing the seven cardinal virtues in slightly tinted glass with closed borders. The nave is divided from the aisles by two plain brick arches on each side, supported on stone columns with carved capitals. The whole of the church, inside and outside, is of red brick, with stone used as weatherings only; and the windows are all simple lancets. The roofs are all open, and of deal, and boarded. The seats have sloping backs, and are made of pitch pine.

Guildford.—Tenders for a new Congregational chapel have been advertised for. The chapel will be in the Geometrical style, with elevations fronting North-street and the Leapale-road. The general walling will be of local stone—the Bargate—of which the new halls, the militia barracks, &c., are built, contrasting with dressings of Bath stone. The large window of the gable in the principal front towards North-street, will be 20 feet high, of four lights, with traceried head, under which will be an arcading of five bays, with three two-light windows. The interior dimensions will be 63 feet by 47 feet 6 inches, with a clear height of nearly 40 feet from the floor to the centre of the ceiling. There will be accommodation for 700. The estimated cost is about 2,500*l*. Mr. Peake is the architect.

Whatlington (*Sussex*).—The church of this Wealden village has been restored and re-opened. The restoration has been effected at a cost of 1,200*l*., of which the Countess Amherst, the patroness of the living, has contributed 400*l*. Both interior and exterior have undergone a change. The walls have been plastered on the exterior. The roof has been re-constructed throughout; and instead of the old bell-turret, a tower has been erected on the north side. The porch has been rebuilt. The interior walls have been re-plastered, the gallery at the west end rebuilt, and open sittings provided, beneath which hats can be placed without being crushed. The interior of the roof at the chancel is composed of cedar, which emits a pleasant fragrance; and the other part consists of oak. The whole of the windows have been re-constructed, and cathedral glass has been used for the purpose. Two new windows have also been opened. At the east end, over the altar, there is a large window composed of stained glass. In the centre there is a representation of the Crucifixion, with Mary, the mother of Jesus, at the foot of the Cross. On one side is Mary Magdalen, in an attitude of devotion, and on the other side that beloved disciple, St. John. On each side of the chancel there is a window of stained glass, with the figure of an angel having a scroll in his hand. At the west end of the building, above the gallery, is a small circular-shaped window of stained glass, in the centre of which is a triangle surmounted by a dove, descending. The pulpit and reading-desk are of oak, carved. The pulpit was made in Paris from the Rev. J. A. Hatchard's design. At the pedestal there are three figures, representing Faith, Hope, and Charity. The pulpit itself is of hexagonal shape; but, being erected against the wall, only five sides are visible. The masonry and carpentering work have been carried out by Messrs. Adams and Pankhurst, under the superintendence of the architect, Mr. S. W. Tracey, of London.

Tenterden.—The Ecclesiastical Commissioners, have given orders to their architect to thoroughly restore at their expense the chancel and east window of Tenterden Church. The date of the chancel being about 1,100, the new window is to be of the Early English style, and will be filled with stained glass.

Tunstall.—A new chapel and Sunday School have been opened here. The building is in a plain Gothic style of architecture, and the material chiefly red and blue brick. The chapel, which is over a basement story 12 feet high, comprises also a school-room, and is approached by two entrances, with staircases on each side. The floor over the entrance lobbies between the staircases is fitted up with rising pews in the form of a gallery; forms being used for the other portion of the chapel, which, as soon as funds will allow, is intended to be fitted up with low open benches. The roof timbers where seen and other portions of the woodwork in the interior are stained and varnished. When completed, the chapel will seat 300 persons, and the cost already incurred is about 400*l*. Mr. Beech, of Tunstall, has been the general contractor for the work, which has been carried out from designs furnished by Mr. Ralph Dain, of Burslem, architect.

STAINED GLASS.

St. Margaret's, Leicester.—The east window of this church is now filled up with stained glass. The glass in the five lower compartments is by Mr. Willmott, and the five upper compartments by Mr. A. Gibbs, London.

St. Alban's Abbey.—A stained-glass window (thirteenth century), which was exhibited in the International Exhibition, has just been placed in the south aisle of the baptistery in this abbey. The window, which is by Messrs. Heaton, Butler, & Bayne, illustrates the "Baptism of our Lord," and its anti-type the "Passage of the Red Sea." The border is composed of conventional foliage, in which birds, reptiles, &c., are entwined. The arms of the Rev. Dr. Nicholson, the rector, and of the borough of St. Alban's, are also introduced.

St. Mary's, Thame.—The west window of this church, 20 feet by 17 feet, in the Perpendicular style, having been for some time undergoing a thorough restoration, and having now been filled with stained glass, was opened on Christmas-day. The window, designed and executed by Messrs. O'Connor, of London, was exhibited in the International Exhibition, and obtained a prize medal. It is composed of six main lights, with transverse mullions and tracery in the sweep of the arch, and is illustrative of the three great epochs, viz.—the Fall of Man, the Means of Grace, and the Restoration of Man. The idea is carried out with two subjects from the Old Testament for each epoch, thus: — For the Fall of Man—1. Adam and Eve eat the Forbidden Fruit; 2. Adam and Eve are expelled from Paradise. For the Means of Grace—1. The Passage of the Red Sea (type of Baptism); 2. Abraham offering Isaac (type of Holy Communion). For the Restoration of Man—1. The Feast of the Passover; 2. The Lifting of the Brazen Serpent. The tracery has in the lower series of lights figures of the twelve minor prophets: above these are figures of the four major prophets, Isaiah, Jeremiah, Ezekiel, and Daniel; over which again stand Noah, Abraham, Moses, and David, each figure in a separate opening: surrounding these figures are cherubim; while in the seven centre lights of the tracery are represented the seven gifts of the Holy Spirit. For this ornament the church is indebted to Mr. Acton Tindal, and his family.

Trowbridge Church.—A memorial window has been placed in this church by Mr. and Mrs. George Webb. The window is of stained glass. The subject is that of the Shunamitish woman and her son, from 2 Kings iv. 19 to 36. The tracery is surmounted by the subject in Matthew xix. 34, Christ blessing little children. The work was executed by Mr. Bell, of Bristol, and has been fixed by Mr. Jos. Berry.

Rottingdean Church (*Sussex*).—This church has been embellished by the introduction of stained glass into all the windows in the south aisle. These windows have been put up to the memory of the late Dr. Smith, by his former pupils. The windows were executed by Messrs. Clayton & Bell, of London, and represent a variety of scenes in our Saviour's life — "The Nativity," "The First Miracle," "The Call of Peter," "The Woman at the Well," &c.

PROVINCIAL NEWS.

Colchester.—A new rectory-house is about to be built for the incumbent of St. Botolph's, in Priory-street. Mr. H. W. Hayward is the architect; and Mr. S. C. Mansfield the builder. The materials are red brick, ornamented with black leaders in diagonal patterns, and Caen quoins and window-dressings.

Poole.—The new Sunday schools of St. James's, Poole, have been opened. They are capable of accommodating about 800 children. The building

was designed by Messrs. Crecke & Parken, of Bournemouth: the builder was Mr. Wickham; and the painting, &c., was executed by Mr. Joseph Moores.

Worcester.—The new police-station premises, in Copenhagen-street, are now completed. The proposed alteration of the magistrates' court, &c., in the Guildhall, will be soon proceeded with. The new station consists of dwelling-houses for the superintendent, in front of the premises; and for a sergeant, in the rear; superintendent's office, large charge-room, six cells (the old station had but two), warmed with Haden's hot-air apparatus, which is intended also to warm the magistrates' court, &c., in the Guildhall; and ventilation and other requirements seem to be provided for. Mr. Rowe, city surveyor, was the architect of the new station.

Swansea.—A company has been formed here under the Limited Liability Act, and called "The Swansea Public Hall Company." The amount of capital required is 3,000*l.*, which is to be raised in 3,000 shares of 1*l.* each; and nearly 2,000*l.* have already been secured. The site selected is in the Willows-fields fronting Mansel-street, and will have a new road leading to it from Grove-place. The new hall will be on a large scale, as it is intended that it shall accommodate as many as 1,800 persons, together with an orchestra of 300 performers. The block plan, too, will be so arranged as to allow of additions being made when necessary, without inconvenience.

Monmouth.—There is a project on foot to convert a portion of the new Market-house—a building which unfortunately is already tottering to its foundation—into a Corn-exhange. Plans and specifications of the proposed alterations, in order to convert a portion of it into an exchange, have been submitted by Mr. C. Lawrence, builder. The designs have been sent, by a meeting of farmers, corn-dealers, and others, to the mayor and corporation of Monmouth, soliciting them to call a meeting to consider the subject of a Corn-exchange for Monmouth, and to view the drawings, &c. There is no doubt that a Corn-exchange is greatly wanted at Monmouth; but the propriety of turning the new Market-house into such a purpose is open to grave objections, both on legal grounds and those of expediency. It is well-known in the town that the upper part of the building has long been considered in a dangerous state, owing to its defective foundation.

Sheffield.—The new Club-house which has been for some months in course of erection at the corner of Norfolk-street and Mulberry-street for the Sheffield Club, is now completed, and opened for the use of the members. The building has been erected from the designs of Mr. M. E. Hadfield, and under his personal superintendence. The entrance-hall is approached from Norfolk-street by three steps. It has marble pedestals, in one of which is an open fire, and in the other a coil of pipes for heating by water this part of the house. A flight of six steps, 10 feet wide, with single blocks of Darley stone, to serve as pedestals for bronzes or statues, forms the approach to the staircase, and thus raises the coffee-room, which is the principal apartment on this floor, above the street level. The coffee-room is 45 feet long and 25 feet wide, and 14 feet high. There are six windows, 10 feet high and 4 feet 2 inches wide. On the ground floor are also the steward's office, a breakfast or morning room, 18 feet by 14 feet, and lavatories and retiring-rooms. Returning to the staircase, which is 5 feet wide, and entirely of Elland-edge stone, with electro-bronze balustrade, we ascend to the first floor, on which is the reading-room or library, 45 feet by 27 feet, and 14 feet high. On this floor a corridor, 6 feet wide, gives access to the committee-room and private dining-room. The staircase is continued to the second floor, and terminates in a pavilion. The billiard-room (the same size as the reading-room) occupies the front. It has a dome-light, with counter-light of ground plate glass. Adjoining is a small smoke-room, and *en suite* are dressing and bath rooms for the use of the members. On the upper floor are seven lodging-rooms for the household. There is a stone stair from the basement to this floor. Communicating with each corridor; and on the basement floor are the kitchen, offices, rooms for the steward and servants, larder, wine cellars, and a back entrance into the area communicating with Mulberry-street. The builders were Messrs. Craven, Hayball, Pitt, Harrison, J. & C. Ellis, and Kitchen. Messrs. J. & J. Rodgers have executed the painting and decorating.

Scarborough.—The Scarborough Cliff Hotel Company's directors have resolved that early in January tenders shall be sought for the old material of such of the houses on the east side of St. Nicholas Cliff as may then be in possession of the company, with a view to a portion of the site of the proposed hotel being cleared by March or April next.

THE STAGE.

Haymarket Theatre. — Shade of Johnson! "Rasselas" in a burlesque! Yet so it is; and what the burley objurgator of puns would say if he knew that his story was made the groundwork of a Christmas extravaganza may be guessed. Pieced with "Dinarbas," it has served Mr. Brough, and gives an opportunity for the display of some *quasi*-Egyptian scenery, and for the introduction of Miss Louise Keeley to the stage of the Haymarket. The first scene would not bear archæological criticism, but it involves water, mountains, and piled-up Martinesque buildings; and is gay and effective. Originally the piece was intended to introduce a panorama of the Holy Land, as visited by the Prince of Wales; and Mr. Telbin, as we stated at the time, journeyed through the country with his son, and made the necessary sketches. Fever, however, on his return was the consequence of his travel, and unfortunately prostrated him, so that the panorama is postponed. It is to be hoped, however, that we may still have it. The Holy Land portrayed by the able hand that set forth Killarney last year at the Lyceum, would be an enjoyment. *Lord Dundreary* still runs his course at the Haymarket, satisfactorily to the manager. But London playgoers would be glad of some variety. We are not amongst those who revile the British public for the favour they have shown *Dundreary*. We say now, as we said on its first production, that it is one of the most complete assumptions of character ever seen on the stage: the piece itself, moreover, is now very amusing, and it is well helped by Mr. Buckstone himself.

New Adelphi Theatre.—At the Adelphi, under the title of "George de Barnwell," a burlesque and pantomine, the work of Mr. Byron, are given, which are independent of each other, the only connexion being that of sequence. Both are good of their kind;—the first distinguished by the capital acting of Miss Woolgar and Mr. Toole (excellent artists), and some gay scenery; and the second by the remarkable performances of the two French contortionists, Bertrand and Arthur. One of these carries the dislocation of the body at the junction with the legs to the extreme of safety point, and withal in so quaint and easy a manner that the feeling of danger is avoided. They are certainly one of the sights of the day. For the first scene of the burlesque, "Where Fancy was bred," and the opening scene of the pantomime, wherein fairies by the dozen drop from the skies (happy time!), Mr. C. S. James deserves much praise for skill in his art.

THE STORY OF THE SALE OF SAINT THOMAS'S HOSPITAL.

IT is worth while to record the history, briefly, of negotiations which led in the end to the destruction of old St. Thomas's Hospital. Work must be eventually done by a few, but a report must be made from time to time to a larger controlling body on whose vigilance depends after all the judicious and economical management of all public matters. Here is an affair which never would have drifted into such miserable confusion if the body of governors had actively looked after the grand committee, and if the grand committee had not abandoned in turn their work and duty to two or three persons.

The Charing-cross Railway Company desired to extend railway accommodation from the Borough to the West End,—a mere business, money-making or money-spending affair,—but one of very great public good; not merely of general comfort, expediting transit, and helping to relieve the crowded streets; but also it was a matter greatly affecting public health; clearing away old buildings; forcing a direct passage through lofty walls of houses; and bringing along the course of the railway a broad river of fresh country air, flowing unimpeded right up to the centre of the densest population; enabling many thousands to pass quickly and cheaply to their suburban homes; leaving their empty dwellings in town to be taken by others who had before lived in more unhealthy corners. The alley and the court are well supplanted by the lane and street. He who did live in the lane is promoted to the street; and he of the street to Blackheath or Lewisham; while the less fortunate tenant in the alley is advanced to the lane or the street,—no great good in the eyes of the rich man, but an immense gain to the poor man himself. Foolish, indeed, has been the outcry against railways,—that they have destroyed the dwellings of the poor. They have destroyed places that it was the greatest good should be extirpated: they have opened up new homes of indefinite number for the fortunate classes: they have caused to be left vacant, improved homes for those to take who cannot remove far from the centre of industry. Hence the projected railway should have been welcomed as a friend to the hospital, and encouraged in its sanitary work; instead of which, by a narrow prejudice, the railway was treated as an enemy, to be harassed and driven away, if possible. Why, even on less general grounds, the railway should have been *invited* to come within a few yards of a corner of the hospital, and to make an hospital station touching its very premises; by which means the sick, when advanced beyond the crisis of their sufferings, and being in a convalescent state, might have been carefully, and without fatigue, removed even in their beds, upon a properly constructed invalid-carriage, to a country asylum, where in purest air their recovery might have been quickened, and thus suffering, time, expense, and wages saved. If the hospital people had been alive to their own and the public interest, they would cheerfully and liberally have co-operated in a most friendly manner with the railway. The railway, seeing the liberal terms they offered, through all their negotiations, would have paid all costs of such invalid-station, and would have made most cheap terms for the conveyance of hospital patients to the country; and that might have been obtained *for nothing*,—*literally nothing*,—for St. Thomas's, which, in the course of a few years, every hospital in London will be enforced to create at the cost of many thousands,—namely, *a county convalescent establishment*. One desires that bygones shall be bygones, except that past experience must teach people to look after their affairs, and not abandon them all entirely to an active little sub-committee. Now for the money matters.

When the Charing-cross Railway were pursuing their Bill in Parliament, the hospital considered the railway would be an enemy injurious to its interests and the comfort of its patients, and opposed the Bill. A small piece of ground was required, which belonged to the hospital. It was open garden ground: to get rid of opposition in February, 1859, the railway offered, for this 1-16th of an acre, 10,000*l.*, which was refused. Again, in April, 1859, they offered 20,000*l.*, which was refused: they then shortly after offered a rent of 6,000*l.* yearly, which was refused. The Commons, however, passed the Railway Bill, notwithstanding the vigorous opposition of the hospital, who employed four counsel, Messrs. Brougham, Paget, Johnson, and Burke.

Indeed, so wildly liberal was the offer of 6,000*l.* per annum deemed by all parties, that actually the lawyers and all others on both sides agreed to it: all considered further opposition at an end; and it is said an agreement was prepared; nothing wanted but the signature of one person, which was relied upon. When, said the Authority, "Make it 9,000*l.* (!) and I will sign." The railway people, who had had time to cool and repented of their liberal terms of 6,000*l.*, broke off indignantly all further negotiation in the Commons. When the Bill was in the Lords, to get rid of opposition, an offer was made to build on a more convenient site a new wing, equal in size and accommodation to the north wing, with a new treasurer's house, church, &c. &c., at the cost of from 40,000*l.* to 50,000*l.* All was again refused.

When, at last the company got their Act, then said the hospital, "You shall take all our place—all or none: we will not let you have a part only." On this, application was made to Vice-Chancellor Wood to enforce the whole purchase under the Lands Clauses Act. The hospital employed again five counsel, the Attorney-General (now Lord Chancellor), Messrs. Rolt, Giffard, Baggalley, and MacNaughten, the railway paying, in all this litigation, only, of course, the costs after being taxed; so that three-fifths of the whole will fall on the charity. After the decision of the Vice-Chancellor it went to arbitration. Two arbitrators were appointed, who could not agree upon their umpire: probably they never intended to agree. Reference was then made, according to the provisions of the Act, to the Board of Trade. Mr. McGregor named the usual professional person, Mr. Powell, but this did not please; and at last Mr. Stewart, of Liverpool, was appointed, with, of course, the consent of both parties. Why Mr. Powell was put aside for a gentleman from Liverpool, who could know so little of London property, is a profound mystery, which may some day be unravelled.

The hospital surveyor valued the four acres of land at about	£70,000
The buildings as a hospital	105,000
Inconvenience and cost of removal	50,000
Total hospital valuation	£125,000
The company's surveyor	£180,000
As old materials only	11,000
Inconvenience, &c.	50,000
Total railway valuation	£241,000

The mean of this is 333,500*l.*, and there is no doubt this sum might have been obtained. They got 296,000*l.* after having originally claimed 750,000*l.* Rumour says that the company would have given 400,000*l.*, and Mr. Powell was inclined to think 350,000*l.* the value.

The costs of all this are as yet unknown; certainly not less than 16,000*l.* or 18,000*l.* Claims of 8,000*l.* have been sent in for professional fees, and about 5,000*l.* have been paid. Here are a few of the professional charges:—Mr. Hunt, 1,050*l.*; Mr. Currey, 1,000*l.*; Mr. Clarke, 740*l.*; Mr. Marrable, 740*l.*; Mr. Pownall, 250*l.*; Messrs. Tite & Clifton, 1,480*l.*

Of all this expense the railway will only have to pay the taxed costs, which will certainly leave 5,000*l.*, out of these 8,000*l.*, to come out of the charity funds.

It must be noted that Mr. Tite had given the munificent donation of 1,000*l.* to the Medical School, so that there is a balance in the favour of his firm of 480*l.* I do not learn that any other of the professionals have allowed any such handsome discount to the charity.

That this noble charity has parted with its property for a sum much under its value—either by means of jobbery or incapacity—is well shown by the corroborative evidence that several parcels of land have been subsequently let at very different prices in the Borough. The Alliance Bank has taken a piece of ground at 500*l.* per annum rent, which, when capitalised, is at the rate of 260,000*l.* an acre. Another property has just been taken on a twenty-one years' lease, at an improved rent of 750*l.*, which is at the rate for the freehold of 298,000*l.* per acre, in no better situation than the frontage of the hospital. The site of the old Town Hall has lately been taken at 500*l.* a year; the area about 2,090 feet superficial: this would indicate a freehold value of more than 250,000*l.* per acre.

Now the hospital ground of four acres, with buildings, and including compensation for inconvenience of removal, has only obtained 74,000*l.* an acre, or 296,000*l.* for the whole. Surely it must have been worth 150,000*l.* an acre if these facts in the same immediate locality indicate anything.

I. H. E.

COST OF COTTAGES.

SIR,—Observing in your journal of the 27th of December last a report of the proceedings of the Society of Arts subsequent to the reading of Mr. Taylor's paper on "Cottage-building and Sanitary Appliances," Mr. J. Bailey Denton is reported to have said that—

"Much has been endeavoured to be done by prizes and the efforts of various societies; but it was a fact that not one of those prize designs had provided for buildings that could be erected for the money which was stated as a necessary condition to the premium offered."

Also that—

"No point would strike them more forcibly than the fact that none of those designs could be built for anything like the price estimated."

And again,—

"A pair of cottages should be built for 200*l.* It might be asked why he had put them at that sum? The reason was this. In all the designs which had received commendation or prizes, there were none the estimates for which exceeded that sum."

Now, being the author of the design which obtained the 25*l.* premium last given by the Yorkshire Agricultural Society for a pair of labourers' cottages, to contain five rooms each, and not to exceed in total cost 220*l.*, I am able to rectify the whole of the above statements, which I am surprised Mr. Denton should have made, seeing that, as an unsuccessful competitor for the second prize, he had the opportunity of making himself better acquainted with the real facts of the case.

I need simply refer to the published report of the society, No. 24, in which my detailed estimate is given at page 37, amounting to 210*l.* 14*s.* 1*d.*, and not "under 200*l.*" Also at page 23, in alluding to the actual cost of the cottages, as built by the Leeds Committee of the Royal Agricultural Society, the following remarks:—

"This pair of cottages was built for the Leeds show, just opposite to the entrance to the show-yard at Armley. The contract price for the pair was 212*l.* 10*s.* The cottages, as they appeared at the show, actually cost 224*l.* 16*s.* 5*d.*; but, of the extra 12*l.*, 5*l.* 12*s.* was for work in the foundations, in consequence of their being built over a hole, and about 5*l.* was for inscription-tablets and signboards, forming no part of an ordinary cottage. The pair of cottages, therefore, with the necessary out-buildings, would certainly have been built at Leeds, on level ground, for less than 220*l.*"

A large number of these cottages has since been built from my plans and specifications in various parts of the country, and there are numerous instances of the cost not exceeding 220*l.*, although there are many remote localities where materials and labour are so costly as to necessarily increase the expense beyond that sum.

Not looking upon the erection of good cottages at remunerative prices in such a hopeless light as Mr. Denton, and not wishing to discourage the stirring endeavours now being so largely made to solve that problem, must be my excuse for troubling you at such length.

JOHN ROSS
(late Richardson & Ross).

THE CATHEDRAL AT TUAM.

SIR,—Your Irish correspondent, in the last number of the *Builder*, attributes an act of Vandalism to the architects of the cathedral at Tuam, which I can hardly allow to pass without some notice. I have much pleasure in sending you drawings, with explanatory letter-press, and a tracing which will, I feel confident, induce you to form a very different opinion as to the manner in which this difficult subject has been treated from that formed by your correspondent.

The existing structure, used as parish church and cathedral, the demolition of which is regretted by your correspondent as "a building of the fourteenth century, and containing very elaborate and beautifully-traceried windows," possesses, in fact, six windows of a most uninteresting type and coarse workmanship. Four of the six are in limestone, and in all probability of the fourteenth century: the others are imitations of them in wood, sanded and painted, and probably of the eighteenth century, to which enlightened period of Gothic art the tower also belongs. The building has been, in my opinion, constructed from the *débris* of a more ancient edifice; the only architectural features deserving such a name being the stone windows above mentioned.

The entrance to this structure is through the chancel-arch and triplet east window of a Romanesque building of great interest and beauty. To have added to the present building would have involved the destruction or removal of this unique ancient chancel for the sake of preserving a building which has no architectural or antiquarian feature of any value. This might, indeed, have been considered "unaccountable." This Romanesque building will be preserved at the east end of the cathedral.

T. NEWENHAM DEANE.

OPENING UP CHINA.

I BEG your powerful aid to lay before the public my plan of staying the bloody rebellion in China; and at the same time developing the very many latent resources of that mighty empire profitably; employing British capital, and adding another link to the great railway and steam-boat excursion tract round the world, *viâ* Cabool, Shanghai, and San Francisco, now looming in the future (not so distant either). My plan, sir, is simply this (pray take a good map, or globe):—Get a concession from the Chinese, and make a railway and telegraph line from Calcutta, through the valley of the Burrampootra, to Shanghai, one of our Chinese treaty ports. This would at once strike the admiration, excite the cupidity, employ the time and attention, and recall the minds of the people to that which they most love,—money-making. I take it that it would naturally follow that the British ideas of commercial and industrial development (in a word, political economy) would take deep root in that interesting country. A Young China party would make good progress, and a new civilization open up the vast resources of the greatest nation of the earth.

Now, sir, for the question—Would it all pay? The answer is:—To suppose a railway at the one end of which would be (India, 150,000,000 inhabitants, and at the other end still more, would not pay, would be in these times treated simply ridiculous; to say nothing of any traffic to Europe or America, which would take time to develop. Now that the affairs of that country are taking somewhat the attention of our public men, let them just see the thing in a feasible shape (I have for years), and it will not be so very much easier said than done.

GEO. TODD, C.E.

COMPETITIONS.

IN the month of June last, a certain committee advertised for plans, elevations, sections, specifications, and estimates for a public hall, offering the munificent sum of 25*l.* for the set of plans, &c., adopted, provided the architect was not employed to carry out the work; and a sum of 5*l.* for the next approved set of plans, &c.

At the present time, we find the same committee again advertising, "not having succeeded in obtaining plans strictly in accordance with their requirements."

Surely this may be regarded as a sign that "good men and true," young or old, are beginning to discern that *small* competitions are too speculative to be worthy of notice, and that in time, therefore, we may hope to be fairly rid of them.

The advertisement seems at a glance to reflect the highest credit on the discriminative powers of the members of the committee; but it also gives rise to a feeling that, if they be *thoroughly* acquainted with their requirements, it would be wise and just to put the matter into the hands of some professional man at once, since the only use of a competition is to obtain *various* interpretations of the stated requirements.

AUGUSTUS FREBE.

LIVERPOOL EXCHANGE COMPETITION.

SIR, I have just returned from Liverpool, where I have been to make some inquiries respecting the competition for the new Exchange there, and learnt, what probably many of your readers would also wish to know, that it was stated at a meeting of the committee, although not mentioned in the conditions, that it was intended that the *prize* of 1,000*l.* was to merge into the architect's commission.

The committee charge a *guinea* for the conditions and plan of site;—a few papers that have cost perhaps a few shillings.

AN ARCHITECT.

THE PUBLIC LAMPS IN THE CITY.

ANOTHER report on this subject has been made to the City Sewers Commission, by their engineer and surveyor, Mr. Haywood. He states that since his last report and that of Dr. Letheby, after which the Commission resolved to burn by meter, and tried some experiments on the subject, he has found the result to be that "by the Great Central Gas Company twelve per cent. less gas is given than is contracted for, and twenty-five per cent. less by the Chartered Gas Company." In reference to certain contrary results alleged on the part of the gas companies, Mr. Haywood remarks that burning by meter will alone set all doubts to rest and do justice to all parties. Carburation he regards as an independent question; but when the gas is burnt by meter, the carburation will not be interfered with by the companies: meantime, however, the reporter expects a decided saving by this means. The fixing of the meters to the lamps is also considered. The companies, it appears, insist on a separate meter to every lamp, and Mr. Haywood recommends that the meters be fixed upon the brackets of those lamps which project from walls, and in wells or pits beneath the others; but he anticipates a more ornamental and sightly description of street lamp, in which the meter will be enclosed at the base of the lamp itself.

In connexion with this subject we may here point attention to a new lamp column. It has been purposely designed by Mr. E. H. Thorman, engineer of the West Ham Gas Works, to meet the difficulties hitherto experienced in supplying public lamps by meter, and is mounted with Burnett's patent reflecting and flame-regulating lanterns, as described in the *Builder*.

Books Received.

Solutions of Questions in Arithmetic by First Principles. For the Use of Teachers and Students. By WALTER M'LEOD, F.R.G.S. London: Longman & Co. 1863.

MR. M'LEOD is the head master, model school, and master of method, Royal Military Asylum, Chelsea, and author of various arithmetical works. His present book, which he states to be the result of many years' experience, contains full solutions of questions in simple and compound proportion, per-centages, commission, interest, discount, stocks, profit and loss, and partnership, by first principles, dispensing with rules altogether; thus solving the most difficult question by multiplication and division alone, and in a simple form, adapted for elementary instruction. Every step in the solution of a problem is thus an intellectual exercise. The method is not one which Mr. M'Leod claims as his own; for it has been recommended by some of the ablest writers on education; but no one has hitherto shown this method to be applicable to difficult problems in the higher branches of arithmetic; and this Mr. M'Leod seems to do in a very efficient way, which cannot but tend to cultivate the mental power of youth.

International Exhibition: the Industry, Science, and Art of the Age. By JOHN TIMBS, F.S.A. London: Lockwood & Co. 1863.

WE have here for the first time, in one compact and entire form, an excellent and complete condensation of the popular descriptions in the *Times*, the *Builder*, and other journals, of the principal objects and articles exhibited in the International Exhibition which has just closed. The volume, though thus in part a compilation, nevertheless contains much new writing, as well as condensa-

tion, in Mr. Timbs's own effective and correct way; and forms a very timely, useful, and interesting compendium and memento of the Exhibition of 1862.

VARIORUM.

FROM the "Third Annual Report of the Cranley Village Hospital," and the "Statement of the Medical Officer of the Cranley Village Hospital" accompanying it (Palmer, publisher, Little Queen-street, Holborn), we are gratified to notice that "the Cottage Hospital continues to afford all the advantages for which it was devised, and may be pronounced a decidedly successful undertaking." The public throughout the whole country are much indebted to its promoter, and active intelligent medical officer, Mr. Napper, M.R.C.S., for his exertions in realizing and establishing so useful an idea as that of village hospitals; by means of which much good will undoubtedly be done both in town and country. Would that the authorities of St. Thomas's Hospital, at the present critical moment in its destiny, would take a lesson from Mr. Napper, under the conviction which his important experiment is so forcibly corroborating, that town hospitals are far more fatal than country ones, whether on the large scale or on a small. No doubt, there is a necessity for both; but the St. Thomas's Hospital authorities can well afford to establish both, and will be inexcusable if they fail to do so. The lives of thousands in future years depend upon their settlement of the question of at least a convalescent hospital removed from malign and exhaustive town air influence.——"The Popular Science Review, January, 1863: Hardwicke." This new scientific quarterly sustains its character as a substantially good periodical. The leading papers comprise Notes of the Exhibition, concluding with machinery, by Dr. Fairbairn; War implements, by Captain Donnelly, R.E.; the Colonies, by the editor, Mr. Samuelson; and Zoology, by Mr. C. Collingwood. Among the other papers is a very interesting one on the planet Mars, by Mr. J. Breen, F.R.A.S., in which we can readily make a somewhat more intimate and familiar acquaintanceship with the ruddy Mars than heretofore. The paper is illustrated by several graphic coloured views of the planet, in which its general hue is depicted by a light and uniform dun or reddish yellow colour; its dark spots by varying intensities of black; and its polar snows and ices by the white hue of the paper. Now Mr. Breen, like other astronomers, regards the more restricted, outshapen, and varihued dark spots as the seas, and the uniform and more wide spread, and far brighter, dun coating as the land; but in this interpretation the views appear to us to be quite unintelligible: the varying dark streaks and spots seem to be much more like the continents, islands, and connecting necks or isthmuses and promontories of land than seas; while the uniform and bright dun hue (mottled in the telescope), in which the darker spots are embedded, much more clearly indicates seas. Moreover, we are deliberately of opinion that it is a mistake to suppose that the seas must be dark and the lands light in colour. When we take a bird's-eye view from a mountain-top, or a balloon, in our own planet, is not the land dark and the water bright? Are not the streams like silver threads running through a "dark ground?" and does not the sunlight glance off the ocean surface and its spray in a somewhat similar way, even notwithstanding the graver tint of its inner depths? Only let us look at Mr. Breen's coloured views of Mars in this light, and all becomes natural and intelligible. The snowy and icy spots near either pole are known to deviate from the actual poles, or axis, of the planet, just as the isothermal lines around our own arctic and antarctic regions show the snowy icy envelopes of the earth to do; the cold and fixed ice and snow penetrating farthest south where there is land. Now it is notable that in most of Mr. Breen's views the ice or snow spots, in deviating from the exact poles of the planet, occupy almost precisely the centres of dark spots; indicating, as we would conclude, that the dark spots are the land, and the wide-spread and uniform mottled dun tint the sea, as seen through a perhaps somewhat foggy atmosphere; or, as the spectral analysis people tell us, through an atmosphere tinged by the reddish hue of bismuth. It is remarkable that while Mr. Breen himself speaks of the diverse-shaded dark spots as the seas, and the uniform and mottled dun surface as the land, he also inadvertently alludes to the dark spots as perhaps indicative of varying surfaces such as forests and sands.——Lockwood's "Builders' and Contractors' Price-Book for 1863" has been revised by Mr. Geo. R. Burnell. An appendix gives valuable tables.——The same publishers, Lockwood & Co., Stationers'-hall-court, issue as usual, for the new year, "The Engineer's, Architect's, and Contractor's Pocket-Book," which includes the "Memorandum Book of Mr. Telford," and is full of valuable information.——Adcock's "Engineers' Pocket Book for 1863," published by Simpkin & Marshall, Stationers'-hall-court, contains, like the last, numerous tables and formulæ for use in mensuration, strength and weight of materials, &c., and lists of the members of the Institution of Civil Engineers, &c.——"The News Almanac" states that, in the year 1862, fourteen insurance companies have transferred their business;—that of these fourteen offices one was established fifty-nine years ago; another, thirty-six years; a third, twenty-nine years; and a fourth, twenty-eight years ago.——"The Utilization of the Metropolitan Sewage and Reduction of Local Taxation" (Kent & Co.), is a pamphlet, in the shape of a letter to Mr. Fred. Doulton, M.P., in the interest of Mr. Ellis's plan as against that of Mr. Napier. The main point of difference is that Mr. Napier's plan is based upon the principle of large dressings of sewage applied over a small area; Mr. Ellis's plan, upon small dressings of sewage, applied to all crops over a large area. The writer urges, in somewhat strong language, that Messrs. Lawes, Way, Morton, and Voelcker are too much concerned in the sale of artificial manures, and in an existing Fish Guano Company, to be quite disinterested in their opinions on this subject.——No. 1 of "The Sculptor's Journal" has been published (Lindley, Catherine-street). It is illustrated with a cut of the "Tinted Venus."——Amongst other works that have reached us are "The Fine Arts and Civilization of Ancient Ireland," by Henry O'Neill (Smith, Elder, & Co.); "A Handy Book on Villa Architecture," by C. Wickes (second series) (Lockwood & Co.); "The Practical Mechanics' Journal Record of the Great Exhibition of 1862," now completed as a fine volume (47, Lincoln's Inn-fields, and Longman, Green, & Co.); and Mr. Leede's Edition of "Chambers." These will receive notice hereafter.

Miscellanea.

FRENCH SORROW AND SENTIMENT.—At Montmartre Cemetery a tombstone has been erected with a colossal tear carved on it, and the words underneath,—"Judge how we loved him!"

WESTMINSTER BRIDGE AND PALACE-YARD APPROACHES.—Notice has been given to the owners and occupiers of the remaining houses situate in New Palace-yard, that they will have to vacate in the course of the month, the space being required for the new Westminster Bridge and Palace-yard approaches.

ARCHÆOLOGICAL DISCOVERIES IN ALGERIA.—There has recently been a great "find" in Algeria. The *African*, French paper, published at Algiers, contains a long account of various antiquarian treasures discovered in the course of making excavations in the French possessions. At Kreneg, nearly 200 Latin inscriptions have been found: at Lambsea many hundred objects of art have been disinterred; and extensive Roman remains, including mosaics, have been brought to light at Constantina.

IMPROVEMENT IN WHEELED CARRIAGES.—Lamentable accidents frequently take place in consequence of the wheels of carriages coming off their axles when on the road. Attempts have from time to time been made to obviate these disasters by means of complicated and expensive contrivances, for securing the nave of the wheel on the axle; and although these endeavours have undoubtedly been successful in preventing accidents in certain cases, it cannot be said that the most improved of them will ensure perfect safety; as, in the event of an axle breaking, the wheel will inevitably become detached from the carriage, which will be upset. The hitherto difficult problem of preventing a wheel from coming off the axle and upsetting the carriage, even when the axle breaks, seems at length to have been solved, to a considerable extent, by Messrs. Upfill, Morton, & Co., of Birmingham. This object is effected in so simple a manner that the expense is not great. The improved axle-box and nave are connected together so as to form one piece, and they are secured on the axle by means of tongues, which take into grooves made round the axle-tree. Unless, therefore, the body of the axletree itself breaks, the wheel cannot become detached from the carriage.

THE VIADUCT ACCIDENT AT CLAPHAM.—Means have been safely and successfully adopted whereby the subsided arches have been brought down, so that the foundations may be examined, which will next be done after the piers are removed. The cause of the subsidence will then probably be discovered, and new foundations for the erection forthwith laid.

PROFESSOR SMIRKE'S LECTURES AT THE ROYAL ACADEMY.—Mr. Sydney Smirke, R.A., delivered the first of a course of six lectures on architecture to the members and pupils of the Royal Academy on the 2nd instant, and the second of the course on the 8th. The others are fixed for the 22nd, 29th, and 5th of February. The first lecture was devoted to a historical review of the subject, and the second treated of architectural character; both founded on previous lectures, of which we have given reports.

SPREAD OF MUSIC HALLS.—A large hall, known as "Turnham's Music Hall," has been constructed in the Edgware-road, facing Chapel-street. The building, which is said to be capable of accommodating 3,000 persons, is of hexagonal form, and built in the Italian style of architecture. According to the *Observer*, its decorations are in cream white and gold. The height of the ceiling is 45 feet, and the diameter of the building is 80 feet, whilst the width of the proscenium is 40 feet, by a depth of 18 feet. The flutes of the proscenium columns are fitted with looking-glass. The cushions round the balconies are composed of crimson Utrecht velvet, and the seats in the balconies and stalls are in green and scarlet leather. The architect is Mr. J. P. Patman. In order that some idea may be formed of the elaborate character of the building, it is stated that its entire cost to Mr. Turnham will be over 20,000*l.*

RAILWAY TO CONSTANTINOPLE.—A project has just been set on foot by an engineer, named Dumont, to continue the present continental railway communication as far as Constantinople. The present European network of railways extends as far as Bazias, a small port on the Danube, 650 kilometres (⅝ of a mile each) distant below Pesth. The line from Paris to Bazias by Strasburg, Munich, Vienna, and Pesth, is about 2,100 kilometres in length, and the journey may be performed in sixty hours. This line of railway might be extended to the Black Sea and Constantinople in two directions; one by Belgrade, Servia, Bulgaria, and Roumelia, a line already surveyed by the English; and the other which would reach Constantinople by Roumania, passing by Crajova, Bucharest, Rustchuck, Schumia, and Adrianople, crossing the Balkans at the most available point, in the neighbourhood of Aidos. This is Dumont's project. The total length of the proposed lines would be about 1,500 kilometres, thus divided:—On the Austrian territory, from Bazias to the frontier of Roumania, near Orsova, 125 kilom.; from Orsova to Rustchuck by Bucharest, 353 kilom.; from Rustchuck to Constantinople by Schumla, Aidos, and Adrianople, 600 kilom.; giving a total from Orsova to Constantinople of 1,085 kilom. Branches from Bucharest to Bazias and Galatz, and those from Cernavoda to the foot of the Carpathians, would be together about 400 kilom., making a total length of 1,485 kilom."

THE GREAT EXHIBITION IN CONSTANTINOPLE. *Public Opinion* translates an article, with reference to the Turkish Great Exhibition, as a specimen of Oriental journalism, from the Constantinople native paper called "The Importer of Events." The article says:—"And within a few days definite orders will be given by the Padishah that the building be erected (if God help, and frustrate the Evil One) by the company formed under the shadow of the 'Divinely strengthened One' (the Sultan), in the neighbourhood of the sacred mausoleum of the most worthy ancestor of his Majesty the Asylum of the Universe, the late Sultan Mahmoud, now in Paradise, in the plain near the school of the Validei Mekteb, in a new and wondrous fashion. Now, although this show be specially for the things of the 'Well-guarded Empire,' yet his Majesty the Padishah, wishing to furnish the artificers and workmen who live in the shadow of his benignity an opportunity to witness with their eyes the cunning devices which, by the employment of the wondrous power, steam, and divers other contrivances, enable the Europeans to produce goods in their workshops at half the price of those wrought by hand—nay, perhaps for less—has decided that, if there be any persons who will desire to send such machines and tools, they shall be received, and that a proper and special place shall be appropriated to them in the vicinity of the show, and that such machines and tools shall be exempt from all customs duty on entering the Empire."

MONUMENTAL.—The committee appointed some time ago to raise an "Oastler Memorial Fund" have obtained upwards of 1,000*l.* It is intended to erect a full-length statue of this "Factory King" in one of the principal towns of the West Riding, either Bradford or Leeds; the former being the place where the short-time movement originated, and the latter the birthplace of the late Mr. Oastler.

DISCOVERY OF GRANITE IN DUMFRIESSHIRE. A quarry of grey granite, said to be finer than that of Aberdeen, has been discovered at Kirkconnell, on the estate of Witham, belonging to a Mr. Maxwell. The *Dumfries Courier* states that the locality has been examined by Mr. David Stevenson, of Edinburgh, civil engineer, who reports favourably both of the material and the prospect of supply. The granite will be shipped from a jetty to be constructed at Aird's Point, facing the Carse, to which it will be sent by tramway to Liverpool, Glasgow, Belfast, &c. The freights will be only from 4s. to 6s. per ton. It can also be easily sent to Dumfries.

RAILWAY TRAINS.—Last year, 1,902,069 passenger trains, travelling 44,594,359 miles, and 1,222,617 goods trains, travelling 42,973,849 miles, were run in England and Wales; 275,825 passenger trains, travelling 5,044,655 miles, and 276,152 goods trains, travelling 6,558,777 miles, were run in Scotland; and 174,445 passenger trains, travelling 4,416,462 miles, and 30,882 goods trains, travelling 1,553,338 miles, were run in Ireland. We thus arrive at the amazing aggregate of 105,141,440 miles as the railway work of the British islands for twelve months. Every mile traversed involved an outlay of 2s. 7½d.

METROPOLITAN ALBERT STATION AND MID-LONDON UNDERGROUND RAILWAY.—This proposed subterranean line of railway is to commence on the east side of St. Martin's-lane, the station being intended to occupy Bedfordbury; running thence, at a depth below the surface of 40 feet, under the parishes of Westminster, St. George's, Hanover-square, St. James's, Brompton, Old Brompton, Knightsbridge, and Chelsea, into the West London Railway at St. Mary Abbot's, Kensington; with seven branch lines communicating with the Kensington station and North and South London junction, Warwick-road, on Lord Kensington's-park, the Kensington Canal-basin, the West London Extension, near Hammersmith, Fulham, and other points of the West London Railway. The estimated cost of the undertaking is 740,000*l.*, with powers to borrow an additional sum of 240,000*l.*

BROWN'S BUILDINGS, LIVERPOOL.—The pile of buildings erected on the west side of the town-hall, by Colonel William Brown, the munificent donor of the library and museum building, has been so far completed and inaugurated. The frontage to Exchange-street is 184 feet, to South Chapel-street 143 feet, and to Rumford-street, 120 feet. The plan of the building is extremely simple, consisting of a range of buildings carried round the three fronts, with a cross range in the middle, forming the shape of the letter E, having two interior courts. There are three entrances from Exchange-street, one from South Chapel-street, and two internal staircases. There are four stories of office chambers, with vaults below the basement, and an attic at the top, containing sample-rooms, keepers' apartments, &c. The exterior is entirely built with stone; the basement grey granite from Dalbeattie, near Dumfries; the superstructure, sandstone from Cefn, near Ruabon. The style of the design may be termed Renaissance of the Venetian school, treated freely. The centre portal on the east front is flanked by two gigantic figures, 13 feet high, on pedestals supporting the entablature. The portal on the north front has two monolithic polished red-granite columns. The central group of columns on the one-pair story are also polished red granite. The internal stairs and corridors are all of stone. In the arrangement of the interior the aim of the architect has been simplicity of plan, easiness of access, and abundance of light. The architect is Mr. J. A. Picton: the contractors are Messrs. Jones & Jump; the subcontractors for the brickwork, Messrs. Smith & Son; masonry, Mr. A. Dempster; ironwork, Messrs. W. Bennett & Sons; plastering, Messrs. Potter; and plumbing, painting, and glazing, Mr. Erlam. The sculptural decorations, of which there is a large amount, have been executed by Mr. Edwin Stirling and his assistants. At the inauguration, the architect announced the fact that the owner of the premises was now Sir William Brown, bart. Sir William was present; but, we regret to say, appeared to be in a very bad state of health.

WATER COLOUR PAINTERS' LANCASHIRE FUND. The Exhibition in Bond-street will remain open till the 17th. Application has been made to the Lord Mayor for leave to exhibit the pictures at the Mansion House for a week, and it is to be hoped his Lordship will assent. The subscription for chances goes on steadily.

GAS.—The Worcester gas company's directors have announced a further reduction in the price of their gas, from 5s. to 4s. 6d. per 1,000 cubic feet.——A portion of the permanent barracks at Aldershott has just been lighted with gas from extensive works erected by the Government on the banks of the Basingstoke canal. The gas supplied is said to be pure and good, and its introduction is regarded with much satisfaction by all ranks and branches of the service. The gasworks, it is said, were erected at a cost of 22,000*l.*

THE HOLY SEPULCHRE.—The following details relative to the works for restoring the cupola on the Church of the Holy Sepulchre are given by the *Monde*:—"The French architect and the one sent by Russia, a German by birth and a Protestant, have made a minute examination of the present state of the cupola. They have ascertained that all the woodwork is so worm-eaten, that at the first heavy squall of wind the top of the cupola might fall on the tomb of the Saviour. The architects propose in the first place to construct a provisional covering so as to protect the pilgrims and the clergy from any accident. As to the cupola itself, every one has been long agreed as to the necessity of its being completely rebuilt. The architects are of the same opinion; and it will, it is said, be constructed in bronze, and be finished by Christmas next year."

ACCIDENTS.—One of the masons employed in the construction of the Bath theatre, was employed in laying stones at the end of a platform abutting on the stage-door entrance, when the support of it gave way and precipitated him into the street. He was not killed fortunately.——A plumber in Liverpool, while engaged in repairing some gutters on the roofs of the houses in Rutland-terrace, Berwick-street, placed his foot on some tallow which he had been using, and slipping fell off the roof of the house into the street below, and was killed.——An accident, illustrative of the perilously-slight manner in which cottages for the poor are built, occurred the other day at Manchester. A woman was coming down stairs in the cottage where she lived, in the Oldham-road, when she put her hand against the wall. This slight pressure pushed away the bricks, and the whole wall fell in! killing the poor woman by the fall of the rubbish. A verdict of manslaughter has been returned against the agent for the property; who, it appeared, had often, but in vain, been warned of the unsafe state of the property.——A farm-house in the west of Scotland has been split from top to bottom by lightning during a recent storm.

ANNULAR BRICK-KILNS.—The annular furnace (patented by Messrs. Hoffman & Licht) consists of a circular channel, of any section, which receives the articles to be fired; which articles are let in through doors in the outer wall, or by apertures formed in the top of the arch. Flues, of the same number as the doors, lead from the bed of the furnace to the smoke chamber, which surrounds the base of the chimney stalk. The communication can be shut off when required by means of cast-iron bell-shaped covers. A damper, which is moveable along the furnace, can be lowered in grooves let into the walls of the furnace, immediately after each flue, so as to separate the horizontal section of the furnace into distinct and equi-distant compartments. The fuel passes through apertures which are formed in the top of the arch; thence through channels, which are formed by the objects to be burned, to the bed of the furnace, in which a certain number of flues are cut to produce a free current to the fire in all parts. Among the advantages claimed are, that the atmospheric air necessary for the support of the fire absorbs the heat of the ready burned bricks and supplies the fire of the furnace with hot air, while on the other side the superfluous heat contributes to the gradual heating of the bricks to be burned, so that no heat is lost except that in the hot air necessary for keeping up the draught in the chimney-stalk. The charging and emptying of the furnace can be done at the same time and without interruption, and it is not necessary to wait for the bricks to cool. A saving is also effected in building the furnaces as compared with the old construction. The cost of these brick-kilns varies between 500*l.* and 2,000*l.* Such furnaces are at work in Germany.

EXTENT OF A HOTEL.—A hotel has just been completed at St. Louis, which is thus described:—"It is eight stories high; contains 515 rooms, 21 parlours, 27 acres of plastering, 7 acres of flooring, 32 miles of bell-wire, 9½ miles of base board, 12 miles of gas, steam, and water pipe, 1½ mile or 1,980 yards of hall, 810 windows, and 14,000 feet of painted imitation of cornice. The number of bricks used in the building is 8,000,000. In the basement there is a railway running the entire length, for the transportation of heavy articles; and above are two steam elevators for lifting fuel and baggage from the ground to the floors above."

DRINKING-FOUNTAIN MOVEMENT.—A memorial drinking-fountain has been erected, at a cost of about 200*l.*, at Baildon, by Mr. Richard Paul Amphlett, of Wychbold Hall, Worcestershire, and Mrs. Amphlett; and has just been formally opened and presented to the village. The structure stands in the market-place, very near the market-cross, and consists of a column, about 20 feet in height, including a flight of four steps, by which it is approached. The material of the main shaft—6 feet in height, and 2 feet in diameter—is red granite from Aberdeen. This is surmounted by a canopy, on which the emblems of the four evangelists are sculptured, and by an ornamental cross in free-stone. The water flows from leaves on four sides of the base, into basins of Aberdeen granite. Round the flight of steps at the bottom of the column are 4 feet of asphalte, with a small stone pillar at each corner. The general character of the design is Old English. The architect employed was Mr. Crossland, of Halifax, an old pupil of Mr. G. G. Scott. The builders were Messrs. J. & W. Beanland, of Bradford and Halifax.

INTIMIDATION BY A STONEMASON.—At York, last week, the Lord Mayor was engaged in hearing a charge preferred against James Dunsmore, for having unlawfully used threats to George Fisher, for the purpose of forcing him to pay a fine of 2*l.* Mr. Mann appeared for the complainant, and Mr. Roberts, of Manchester, for the defendant. Some time ago the stonemasons of York struck for an advance of wages; and Fisher, who did not belong to the Masons' Union, was applied to by the union men to strike also. He declined to do so, but afterwards joined the society. He was then told that for refusing to give up working during the strike the union had inflicted a fine of 2*l.* This sum he did not pay; and he heard no more of the matter until the 26th of November last; when, having been for six weeks out of work, he had taken a job under Mr. Keswick, who has a contract for executing some of the work in connexion with Leedal Bridge. After breakfast on that day Dunsmore reminded Fisher of the fine of 2*l.*, which still stood against him, and told him that unless that amount was paid the whole of the men would strike. On Saturday night a similar statement was made to Fisher; and on the following Wednesday Mr. Keswick discharged Fisher in consequence of a communication he received from his foreman, Henry Ward. The bench were of opinion that upon the evidence of Fisher the defendant had brought himself under the Act, and they awarded one month's imprisonment.

BRONZE DOORS FOR THE CAPITOL AT WASHINGTON.—An American paper has a description of the magnificent doors designed for the eastern front of the centre building of the Capitol at Washington:—"The door is composed entirely of bronze, back and front, and is said to be the only elaborate work of the kind in the world constructed in this manner. Its total weight is about 20,000lb. The leading subject of its embellishments is the history of Columbus. It has door valves, with four panels in each valve, and one semicircular panel over the transom. The first panel contains a scene representing Columbus before the Council of Salamanca; the second panel his leaving the Convent of La Rubida; the third panel his audience before Ferdinand and Isabella; the fourth panel his departure from Palos; semi-circular panel his first landing at San Salvador; the fifth panel his first encounter with Indians on the island of Hispaniola; the sixth panel his triumphant entry into Barcelona: the seventh panel represents him a prisoner in chains, about to be sent back to Spain; and the eighth panel contains a scene representing his death. There are sixteen small niches in the border or frame around the door, in which are sixteen statuettes, representing distinguished contemporaries of Columbus; and between the panels are heads representing historians who have written on his voyages from his own time down to the present day, ending with Irving and Prescott. Crowning the door is a bust of Columbus."

SIR JOHN SUTTON'S LONDON ESTATES.—With reference to our notice of the late Mr. Foxhall, we are asked to mention that he resigned the appointment to Sir John Sutton's London estates about a year and a half ago. Mr. Benjamin Ferrey was appointed his successor, and is now surveyor to the estates, which are very considerable.

THE OTTOMAN NATIONAL EXHIBITION.—The bad weather has at length proved too much for the contractors and workmen employed on the new building (says the *Levant Herald* of December 24th), and the latter have accordingly been knocked off since Sunday. The four porticoes, which are to form the entrances to the structure, were, however, covered in before this interruption; and a few days after the resumption of work will suffice to roof in the whole. This once done, the further progress with the shell of the building will be easy and rapid, though we shall still adhere to our conviction that neither the house nor its contents can possibly be ready for the proposed "opening" on the first day of Ramazan.

LEAD MINES.—The number of lead mines worked in Cornwall in 1861 was 44; in Devonshire, 11; in Cumberland, 79; in Northumberland and Durham, 39; in Westmoreland, 6; in Cheshire, 1; in Shropshire, 9; in Yorkshire, 30; in Somersetshire, 4; and in Staffordshire, 1; making a total for England of 224. As regards Wales, the county of Cardigan had 43 lead mines at work in 1861; Carmarthenshire, 3; Denbighshire, 14; Flintshire, 48; Montgomeryshire, 14; Merionethshire, 3; Pembrokeshire, 1; Radnorshire, 2; Carnarvonshire, 19; making a total for the principality of 147. The Isle of Man, at the same time, had 5 lead mines worked; Scotland, 7; and Ireland 7; making a total for the United Kingdom of 390, as compared with 380 in 1860, and 264 in 1859. The quantity of ore raised does not show a corresponding increase. The metallic lead produced from this aggregate of ore was 65,634 tons in 1861, against 63,317 tons in 1860, and 63,233 tons in 1859, the estimated value being 1,445,255*l.* in 1861, 1,412,660 in 1860, and 1,410,095 in 1859.

ORNAMENTAL LIVING FENCES.—Although by no means is this a new method of forming ornamental living fences, as it has been largely practised on the Continent for more than three centuries, I have seldom seen it used in Britain. It is the method of forming the sides of berceaux walks, and consists in planting young slender trees in a slanting direction—*i.e.*, every tree leaning the opposite way and in the same line, that they will cross each other and form a regular trellis with diamond-shaped openings. At the parts which come in contact, if a small piece of the bark is removed and the parts tied together and clayed over, as in common grafting, a union takes place, leaving each tree grafted into its neighbour, which in time makes one of the most beautiful and strong hedge fences imaginable. The following trees are best suited for the purpose;—Mountain ash, common ash, laburnum, most of the poplars, strong-growing willows, alders, birch, beech, chesnut, elm, hornbeam, &c. Such fences need at no time exceed four or five inches in thickness; and, when established a few years, will resist bullocks or any kind of cattle, and form excellent screens in gardens for separating one part from another, or for hiding out objects it is desirable shall not be seen. —L. O. S.—*Scottish Horticulturist.*

ARTISTS IN FRANCE.—At the recent distribution of medals at the Paris School of Fine Arts, Count Walewski made an address, at the close of which he said,—"Yes, gentlemen, the career of the arts is an everlasting struggle, a continued competition in which the high places are only attained by right of victory. Reflect, therefore; and, if you feel confidence in your own efforts, go forward. The time is propitious: barriers are being removed: prohibitions are disappearing: exhibitions succeed each other: from all points of France, and from all parts of Europe, a never-ceasing demand is made for your works; and it may without hesitation be proclaimed that artists are now the sole artisans of their own fortunes. Ought the protection of the State to be withdrawn from them for that reason on their leaving the school? Unquestionably not; only you will yourselves aid it to change its character that protection will no longer continue dividing itself and wasting its resources in often fruitless efforts: it will no longer have to seek necessities, but works: it will call them into existence: it will be the great and fruitful protection; that which creates the beautiful, because it knows how to honour and remunerate talent; and because, in order to excite art to become elevated, the reward must be placed aloft."

EMPLOYMENT FOR COTTON-WORKERS ABROAD.—At Brussels, in order to employ the poor who are suffering from the effects of the scarcity of cotton, a sum of 30,000 francs has been voted by the municipal council for the construction of some works of improvement in the city. They consist in levelling streets, prolonging others, and in improvements towards forming a new boulevard.

THE GLASGOW ART-UNION.—In this society this year the prizes are allotted as formerly; but, instead of the usual engraving, every member is to receive three photographs of as many pictures that form the chief prizes. These are "Morte d'Arthur," a work in sepia, by Mr. J. Noel Paton; "The White Cockade," by Mr. J. E. Millais; and "The Better Land," by Mr. Sant.

THE PROPOSED ROYAL ARCADE.—The proposed Royal Arcade is described as consisting of a covered public promenade and all necessary buildings, the object being to connect Bond-street with Regent-street. It will commence at a point in New Bond-street between Clifford-street and Conduit-street, near to Stevens's Hotel, and thence running in a direct line north-easterly, to terminate in Regent-street near Nos. 189 and 191 on the west side of that street, and near Old Burlington-mews. Its construction will necessitate the removal of a mass of old and ruinous houses for the erection of commodious shops and houses, besides improving the communication between the localities. The estimated cost of the proposed improvement is 290,000*l.*

THE DAM AT MARSHLAND.—On behalf of the district commissioners, Messrs. E. F. & E. Jackson, in a letter to the *Times*, called forth by previous remarks of a correspondent, enter into an explanation, in which they say,—The execution of the work was entrusted to Mr. Harding, who acted under orders from Mr. Page. As the work proceeded, the commissioners questioned its stability, and expressed to Mr. Page their dissatisfaction. Some correspondence ensued; and on the 16th of December Mr. Page signified to the commissioners that he could no longer act as their engineer, except for the security of the sluice and bank. The commissioners then requested him to state the time required for completion and at what cost. On the 21st of December, before the receipt of the reply, the work failed; and on the 23rd of December they discontinued his services. The commissioners did not consider it expedient to incur further expense in attempting to restore the work, the cost of which had already far exceeded their expectations.

COPPER MINES.—The number of copper mines worked in England and Wales in 1861 was 139, of which 97 were situate in Cornwall alone. In 1860 the number was 137, and in 1859, 147. The quantity of copper ore raised from these mines was 196,798 tons in 1861, as compared with 196,553 tons in 1860 and 208,031 in 1859. Besides these mines eight were worked, in 1861, in Ireland, as compared with ten in 1860 and 1859, the production of copper ore being 15,661 tons in 1861, 18,411 tons in 1860, and 14,258 tons in 1859. Various other districts produced 19,028 tons of copper ore and iron pyrites in 1861, 21,732 tons of copper ore in 1860, and 14,510 tons in 1859. The total production of copper ore for the United Kingdom was 231,487 tons in 1861, of the estimated value of 1,364,727*l.*; 236,696 tons in 1860, of the estimated value of 1,507,183*l.*; and 236,719 tons in 1859, of the estimated value of 1,506,835*l.* The yield of fine copper for the United Kingdom was 15,331 tons in 1861, of the estimated value of 1,572,480*l.*; 15,968 tons in 1860, of the estimated value of 1,706,261*l.*; and 15,770 tons in 1859, of the estimated value of 1,734,700*l.*

CLAMP FOR JOINERS.—A patent has been obtained by Mr. W. H. F. Wells, of Woolwich, for an improved clamp for the use of joiners and others engaged in working wood. It consists of a notched or plain bar of metal of any desired length, according to the purpose for which the clamp is to be applied. When one arm only is used, the end of the bar is turned up to form an abutment or pressing surface, against which one side of the material to be clamped is placed. The sliding arm is self-fixing by its peculiar form; and, when placed in the proper position upon the bar, forms the other abutment. An adjusting screw, fitted either in the head of the bar, or in the end of the sliding arm, or in both, completes the clamp. In place of turning one end of the bar up, a plain bar notched in opposite directions, and two sliding arms may be added. The sliding arms are formed with a hole or slot at one end, through which the bar can be passed. The arms can thus be moved along the bar to any required position.

DUBLIN WINTER GARDEN AND PALACE.—The directors have selected from the designs sent in by about twenty-four competitors, the design of Mr. Jones, of Dublin; but how far it will be carried out remains to be seen. The "quantities" are being taken out.

COUNTY SURVEYOR FOR STAFFORDSHIRE.—At the last meeting of the county magistrates, Mr. Robert Griffiths, of Bidgnorth, was appointed county surveyor, in the room of Mr. Trubshaw, deceased. There were sixty-seven candidates for the office, and among the number were many eligible men.

FALL OF A RAILWAY TUNNEL.—Twelve or fifteen yards of the end of a tunnel at Oakenshaw, on the Cleckheaton branch of the Lancashire and Yorkshire Railway, fell recently and completely blocked up the passage. A mail train from Mirfield, which should have reached Bradford at a quarter before six in the morning, ran into the midst of the rubbish. The engine was firmly embedded, but the passenger carriages were soon backed out. There was no loss of life nor other serious personal injury. Between seventy and eighty men were set to work to clear away the earth and rubbish, and it was expected that the line would be freed from obstruction on Tuesday night. A common road crossed the portion of the tunnel which fell in.

THE PROTESTANT CHURCH AT NAPLES. — The edifice will occupy a site in the Strada San Pasquale, at the back of the Riviera di Chiaja, a quiet yet central spot. The stone was laid by an English lady whose maiden name was Locke, but who is now the Duchess of St. Arpino. The architects, Messrs. Smith & Son, of Hertford and London, were selected by a public meeting of subscribers in April last, and their plans were approved of by the British Government, who have made a grant of 1,500*l.* under the terms of the Consular Act. Mr. Smith is well known as the builder of several Protestant churches on the Continent, and very recently of one at Nice. The funds contributed up to the present time, inclusive of the Government grant of 1,500*l.*, amount to 4,150*l.*: of this nearly 2,000*l.* have been given in Naples, and 800*l.* by friends in England. The further sum of 1,500*l.* has, therefore, yet to be raised to complete the original design of the architects.

TENDERS.

For the erection of the Royal Infirmary for Diseases of the Chest, City-road. Mr. J. L. André, architect. Quantities by Mr. C. Poland.

Axford & Co.	£2,630 0 0
Mansfield & Son	2,628 0 0
Browne & Robinson	2,556 0 0

For the erection of a slaughterhouse and stable for Mr. J. O. Moore, Rochester. Mr. J. H. Andrews, architect, Rochester.

Jennings	£434 0 0
Sampson	410 0 0

THE LIZARD SERPENTINE
COMPANY, LIMITED
Works—CARLEON COVE, LIZARD, CORNWALL.
Offices—24, ST. JAMES'S-STREET, LONDON, S.W.

The works having been suspended for a considerable time in consequence of the death of the late proprietor, the Lizard Serpentine Company have to inform Architects, Builders, and the public generally, that having entirely rebuilt the factory, and fitted it with the most improved machinery, they have now resumed operations, and will be happy to furnish estimates, and execute in the best manner any work entrusted to them

Communications to be addressed to the SECRETARY, No. 24, St. James's-street; or to Mr. THOMAS OAKDEN, 94, King-street, Manchester, who is sole agent for Liverpool and Manchester.

LITTLE CASTERTON FREESTONE.
Apply for prices, &c. to
OCTAVIUS N. SIMPSON, STAMFORD;
and see Specimens at the Office of
Messrs. PINDER SIMPSON & SONS, 29, Savile-row, London, and at the Museum of Practical Geology, Jermyn-street, W.

This stone (which is a perfect oolite), is raised in blocks of any workable size, and is about four feet thick in the bed. It will stand ANY WEATHER, is much used for water works, and for the building and restoration of churches. When used as ashlar work it is not necessary to place it bed-wise. It works freely with a tooth-saw, and is wrought at a cheaper rate than any stone in the kingdom.

TURNED MARBLE and STONE COLUMNS, TABLES, VASE STANDS, &c. of every description and any size. The Trade supplied with Sawn Marble Slabs, Mortars, Vases, &c. at the lowest prices. Every description of Ornamental and Plain Work in Marble or Stone at
W. F. WILLIAMS'S
Marble Works, 316, Euston-road, London, N.W.

JOSEPH FAIRER,
Turret Clockmaker to Her Majesty's War Department,
188, St. George-street East, London.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving the subjoined to be followed by one FROM SIR RAYMOND JARVIS, Bart. VENTNOR, ISLE of WIGHT.—Second Testimonial:—"March 10th, 1862. In reply to your letter received this morning, expecting the Gutta Percha Tubing for Pump Service, I can state with much satisfaction, it answers perfectly. Many builders and other persons have fully examined it, and there is not the least apparent difference since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."
N.B. From this testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha tubing.
THE GUTTA PERCHA COMPANY, PATENTEES,
15, WHARF ROAD, CITY-ROAD, LONDON.

*** Also Manufacturers of the Patent India-rubber Knife-boards, Cocoa-nut Fibre Door Mats, Matting, &c.
T. KENT and CROWDEN & GARROD, are stamped on the Brushes.

PRIZE MEDAL.—INTERNATIONAL EXHIBITION, 1862.
CONDY'S PATENT FLUID is adopted by the Leading Hospitals and by most Government Departments.
It contains Nature's Disinfectant (OXYGEN), possesses the exact properties, and acts precisely in the same manner, as the great disinfectant provided by Nature for purifying the air we breathe, and called by chemists OZONE; combining, therefore, the most powerful purifying properties with a perfectly innoxious and wholesome nature, and being without odour of its own, it forms the safest and most efficient disinfectant and deodorizer for sick rooms, slaughter-houses, sinks, house-drains, sewers, cesspools, graveyards, &c., and is permanently useful for numerous domestic purposes, for which all other deodorizing agents, on account of their poisonous character, or disagreeable smell, are wholly improper and inapplicable, such as purifying impure water, sweetening musty casks, removing and preventing taint in meat, game, fish, &c. as well as by use in the bath for promoting and maintaining personal purity.—Obtainable of all first-class Chemists, in Bottles at 1s. 2s. or 4s each; or per Gallon, 10s. ONE GALLON MAKES THREE HUNDRED GALLONS ADAPTED FOR USE.
Wholesale of the Patentee, Battersea, Surrey, S.W.

PATENT GRAINING APPARATUS.—TO HOUSE PAINTERS, GRAINERS, BUILDERS, RAILWAY COMPANIES, SHIP BUILDERS, &c.
One of the greatest improvements of the age is KERSHAW'S PATENT GRAINING APPARATUS, for producing an imitation of the various woods. They are very extensively used, and with great success. They are very cheap, and will repay the cost of them in two days' working. They only require a trial, and any person studying his interest would not be without them. A prospectus will be sent upon the receipt of a stamped directed envelope addressed to T. KERSHAW, Patent Graining Tool Manufacturer, 33, High-street, Marylebone, London, W.
N.B. One of the Patent Graining Tools will be forwarded upon the receipt of a Post-office order for 22s.

KENT'S PAINTING BRUSHES are all stamped G. B. KENT & CO.
And are manufactured solely by G. B. KENT & CO. at 11, Great Marlborough street, London, W.
Established 1777.
KENT'S BRUSHES have been celebrated for their superior quality for the last eighty-four years, and may always be depended upon as the best that can be made.

PRIZE MEDAL, 1862.
HAMILTON & CO.
No. 10, GREEK-STREET, SOHO-SQUARE, LONDON, W.
Sole Manufacturers of

Where also may be obtained their
CELEBRATED STAINS for EVERY DESCRIPTION of WOOD,
Together with all kinds of Colours and Varnishes,
Warranted of the purist Quality and at the lowest Prices.
Agents for Kershaw's Graining Machines.

STAINING DEAL TO IMITATE ALL KINDS of WOODS. It requires NO SIZING, and will stand exposure to the weather. Light Oak, 4s. per gallon; Middle Tint, 5s. per gallon; Dark Oak, 6s. per gallon; Mahogany, 8s.; Rosewood, 8s.; Walnut, 8s. Varnishes for MAYLOR'S Stains may be had at the Factory, No. 4a, James-street, Oxford-street; also Manufacturer of Improved Knotting and Decorative Varnishes.

VENTILATION—PURE AIR.

THROUGH THE EXTERNAL WALL.

With single pulley, from 6s. each; with leading pulley, from 8s. 6d.
These Ventilators are arranged so that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants, and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 187 and 189 (late 117 and 118), Union-street, Borough, London; and of all respectable Ironmongers, Builders, &c.

HUBBUCK'S PATENT WHITE ZINC PAINT.

BY their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London atmosphere.

ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Barytes from ten to thirty per cent Whether sold under the name of "Improved Zinc Paint," or as the number Two or Three qualities, no workman can produce good work with such material. Workmen who have once used the Patent Zinc Paint will never willingly use any other Paint for their best work.

CHEAPNESS.—Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.

EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK & SON,

WHITE LEAD, OIL, PAINT, and VARNISH WORKS 24, LIME-STREET, LONDON.

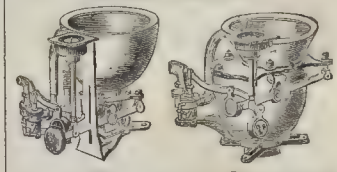
CLASS 35, NO. 6349.

3s. 9d.



The ONLY MEDAL "for STONEWARE" has been awarded to DOULTON & WATTS, LAMBETH POTTERY, LONDON

In expectation of a greatly increased sale, D. & W. have determined to introduce the moreful pattern of their ENAMELLED STONEWARE CLOSET-PANS, at the price of the commonest description of earthenware.

Experience has shown that this shape is the most simple and efficient, and that in strength, durability, and cleanliness, it cannot be surpassed by the most expensive closets.

FIGURE "D" STONEWARE CLOSET PAN AND TRAP, 3s. 9d. COMPLETE.

J. TYLOR & SONS' PATENT
REGULATOR WATER-CLOSETS.

Valve. Pan.

The Regulator Valve gives perfect control over the supply of water to each closet, so that, however small the fall of water, perfect flushing is insured. Any number can be worked by one supply pipe. No cistern-valves, cranks, or wires required. The closets can be seen in action at the Manufactory, and illustrated Catalogues had on application to the Manufacturers, J. TYLOR & SONS, Warwick-lane, Newgate-street, London.

OSLEY POTTERY WORKS,

F. K. BARNES & SONS, Brokers.

Canons' Marsh, Bristol, January 7th, 1863.

WOODFORD RAILWAY.—The GROVE, WANSTEAD.—Portions of this beautiful Estate are now TO BE LET for Building purposes, and Villa Residences are much required in the locality Soil gravel, situation healthy, and aspect excellent The Snaresbrook Station is 400 yards only from the Estate, and the City is reached in twenty-five minutes The Leases will contain a clause entitling the Lessee to purchase the Freehold within a specified time. LAND also TO LET at Buckhealth, Tottenham, Staples Farm, some very eligible SITES in the Grove Road, Mile-end, a few of which are adapted for shops, and largely near Very CHEAP PLOTS TO LET, at Ealing —Apply to Mr. KNIGHTLEY, Architect, 2, Cannon-street.

PHILBROKE ESTATE, at Leytonstone, on the Woodford and Loughton Railway, twenty minutes from Fenchurch and Bishopsgate stations —This valuable FREEHOLD ESTATE (land-tax redeemed), surrounding the Station, healthy locality, gravelly soil, excellent drainage, water and gas laid down, roads made, sand on the estate, it is proposed TO LET in Plots suitable for building detached and semi-detached villas. Repeated applications have been made for houses in this neighborhood For terms, apply to J. CHENEY, at the Surveyor's Office, Philbroke Estate, Leytonstone, Essex.

CRYSTAL PALACE (close to).—Valuable BUILDING SITES TO BE LET or SOLD within a few minutes' walk of Sydenham Station, fronting a handsome carriage road of considerable width. The supply of houses in the neighbourhood is quite inadequate to the demand, the position being undoubtedly one of the most favourite and convenient in the vicinity of town, its healthy salubrity, picturesque scenery, proximity to the Crystal Palace and Park, facility of access to the City and West end, all always insure to the locality a high rank in popular estimation, and remunerative rentals may consequently be relied on for any houses erected on the property. 12 to 15 per cent on the outlay has been paid for some residences lately built on this land Sewers in use; gas laid on —For plans and terms, apply to Messrs. FOX & BOUSFIELD, Agents for the Estate, 4, Coleman-street, City.

BUILDING LAND TO BE LET.—HACKNEY, close to the Railway Station, for fourth-class Dwelling-houses

NORWOOD, on Westow Hill, for Shops and Dwelling-houses.

PERRY HILL, Sydenham, for Shops.

Advances in each case if required

Apply to Mr. F. K. GREEN, 25, College-hill, Cannon-street, E.C.

WANTED, on Lease or to Purchase, BUSINESS PREMISES in the vicinity of London, with a good Dwelling House and Foreman's Cottage; must be near a railway station or navigable river; a good supply of water from stream or well, with a few acres of grass land for drying purposes, are indispensable Forward part culars and terms to C F BAXTER, Accountant, &c. 2, Guildhall-chambers, Basinghall-street, E.C.

PARISHES of ST. GILES, CRIPPLEGATE and ST. LUKE, MIDDLESEX.—TO BE LET by TENDER, for eighty years, a PLOT of LAND on the North side of the Middle-road (on part of which the King Harry's Head now stands), for the erection of a Tavern and Three other Houses.—Particulars, with plan, can be obtained at the Office of Mr. A. J. BAYLIS, Solicitor, 1, Church-court, Old Jewry.

TO BUILDERS and OTHERS.—The GOLDSMITHS' COMPANY propose LETTING, on a Building Lease, for a term of 99 years, a very eligible PLOT of FREEHOLD LAND, abutting on the high road leading from Kentish Town to Acton, and close to the Station of the North and South Western Junction Railway. An Auction will be held at Goldsmiths' Hall on THURSDAY, the 5th of FEBRUARY next, at THREE o'clock p.m. to RECEIVE PROPOSALS for the Land, which are to be sealed up and left at the Clerk's Office, Goldsmiths' Hall, before THREE o'clock on that day, and the parties proposing will be expected to attend the Committee. A plan of the land may be obtained, and all other particulars known, at Mr. HARDWICKE'S Office, 1, Henrietta-street, Cavendish-square.

N B The Committee do not pledge themselves to accept the highest or any other of the proposals that may be delivered.

BRICKFIELD, SURREY.—TO BE LET, with immediate possession, within one mile of Wilby Station, on the direct London and Portsmouth line, a well adapted YARD, with suitable Kiln and Tile sheds erected thereon Large quantities of clay and sand surround them of excellent quality for the manufacture of bricks, tiles, pipes, and pottery-ware. There is chalk in the neighbourhood for lime, with an opening for a first-rate trade. A large Government Asylum is to be built shortly close to the Estate.—For particulars apply to Mr. S. G. BERRY, Combe Court, near Godalming.

BUILDING LAND TO BE LET, for Shops and Private Houses, on the Main Wandsworth-road, within ten minutes' walk of Nine Elms Boat-pier, and three minutes' walk of the New Workshops at Battersea for the South Western Railway, which are nearly complete, and will employ 1,000 men. Houses are in great demand —For particulars apply to H. N. BATES, The Priory, Wandsworth-road

WATERSIDE LAND and PREMISES, on the BANKS of the THAMES, within 30 miles of London, TO BE LET on LEASE, with the option of purchase, the property is most eligibly situate for the erection of factories, millineries, or works of any description which may be carried on at some distance from other buildings, and has the advantage of a line of passing trade, which gives direct retail custom on the public roads adjoining There is also a capital supply of fresh water, which for some purposes will be most valuable —Apply to Messrs. G. & E. HILLARY, Solicitors, 5, Fenchurch-buildings, Fenchurch-street, London

CAMDEN TOWN, in the Centre of the High street.—TO BE LET on LEASE, a large PLOT of GROUND, at present covered with cottages, 70 to 80 feet deep, by 25 feet wide, suitable for the erection of a Public Refectory.—Apply to Mr. WILLIAMS, 91, High-street, Camden-town, N.W.

WATERSIDE WAREHOUSE WANTED, FLOUR MILLS, or LAND on River or Canal, within two miles of London, to LET, in Rent or Occupation.—Address particulars to R. D. 16, Alfred-place, Newington-causeway.

BUILDING LAND.—TO BE LET, most eligibly situate in the very heart of a densely populated neighbourhood close to Shoreditch Church, suitable for the erection of small or large rooted houses, which are in great demand both for occupation and as an investment. Title free and open on the Estate in unusually favourable positions for Shops. Advances made if required. For further particulars, apply to Mr. CLARKSON, Surveyor, 94, Great Saint Helen's, City.

DALSTON, Eleanor Road North, Richmond Road.—BUILDING LAND TO LET in this favourite neighbourhood for Seven-Roomed Houses. Advances made if required.—For further particulars, apply to Mr. CLARKSON, Surveyor, 94, Great Saint Helen's, City.

TO CARPENTERS and UNDERTAKERS. A BUSINESS, established sixty years, TO BE DISPOSED OF, in the above line, in Walworth For particulars inquire at 167, Southwark Bridge-road, near the Borough-road.

PLUMBERS, PAINTERS, and GENERAL CONTRACTORS —An OFFER presents itself to a Person of Small Capital (with good security), in a very old established BUSINESS, a few miles from London. A more ADVANTAGEOUS OFFER would be entered into with a responsible person who can command 200l to 300l —Apply to Mr. HISCOCK, Messrs. Franks, Lead Merchants, Borough, Southwark.

TO CARPENTERS and UNDERTAKERS. DORKING.—TO BE DISPOSED OF, on moderate terms, with immediate possession and suitable premises, at a low rent, a small BUSINESS in the above trades, capable of much improvement, well suited for a young man with a moderate capital and possessing a proper knowledge of his business.—Apply to Messrs. WHITE & SONS, Auctioneers, &c. Dorking, Surrey.

TO PLUMBERS, CARPENTERS, and BUILDERS.—TO BE DISPOSED OF, a good West-end BUSINESS as above, doing between two and three thousand a year for the last few years. To those with small capital very moderate. Goods, and Fixtures, 300l. The stock, about 300l taken at a valuation. No person treated with but of the highest respectability. No agents need apply —Address, Mr. H. CONOLLY, Lead Merchant, No. 29 Hampstead-road, N W

TO BUILDERS, CARPENTERS, and OTHERS.—A first-rate BUILDER'S and JOBBING BUSINESS, at the West end, TO BE LET, carried on by the proprietor (lately deceased) upwards of fifty years. To any person commencing in the above business, this presents an excellent opportunity. Particulars of W. MITCHENER, Printer, 23, Red Lion-street, Holborn, W.C.

TO PLUMBERS, GAS-FITTERS, and DECORATORS.—A SHOP to be DISPOSED OF in the above line, in the suburbs of London, doing a good business, and with attention might be greatly increased —Apply, any evening, to T. GRAVES, 18, Seymour-street, Euston-square.

London:—Printed by CHARLES WYMAN, Printer, at the Printing-office of Fox & Wyman, No. 74 and 75, Great Queen-street, Lincoln's-inn-fields, in the Parish of St. Giles-in-the-Fields; and published by the said CHARLES WYMAN, at the office of "THE BUILDER," No. 1, York-street, in the Parish of St. Paul, Covent-garden, both in the County of Middlesex.—Saturday, January 10, 1863.

SHEFFIELD SCHOOL of PRACTICAL SCIENCE and METALLURGY.

PRESIDENT.

His Grace the Duke of Devonshire, K.G. F.R.S. D.C.L. Chancellor of the University of Cambridge.

VICE PRESIDENTS.

The Mayor of Sheffield, John Brown, esq.
The Master Cutler
The Right Hon. Lord Wharncliffe
Sir David Brewster, K.H. D.C.L. F.R.S.L. & E. M.R.I.A.
Sir Roderic Murchison, F.R.S. Director of the Royal School of Mines.
John Percy, esq. M.D. F.R.S. Professor of Metallurgy in the Royal School of Mines.
William Fairbairn, esq. C.E. F.R.S.
Robert Hunt, esq. F.R.S. F.S.S. Keeper of Mining Records.
Warrington W. Smyth, esq. M.A. F.R.S. Professor of Mining and Mineralogy in the Royal School of Mines.

LECTURERS.

The Rev. G. B. Atkinson, M.A. Principal of the Collegiate School; late Fellow and Assistant Tutor of Trinity Hall, Cambridge.

PROFESSORS.

Chemistry, Metallurgy, and Geology—James Allen, Ph.D. F.C.S. of the Universities of Giessen and Berlin.
Engineering and Mining—J. Thompson C.E.
Mathematics, Natural Philosophy, and Applied Mechanics—Rev. G. B. Atkinson, M.A.

The Sheffield School of Practical Science and Metallurgy will afford a complete scientific and practical education to students who are destined to become civil, mechanical, or mining engineers, or manufacturers of any kind. Its object is thoroughly to discipline the students in the principles of those sciences upon which the operations of the engineer, metallurgist, or manufacturer depend.

The education will be given by means of systematic Courses of Lectures, by Catechetical Class Instruction, by Practical Teaching in the Laboratory and Drawing room, and occasionally by Field Excursions.

The School of Practical Science and Metallurgy will be conducted in the Buildings of the Sheffield Collegiate School. The two Institutions, although both under the superintendence of the Rev. G. B. Atkinson, Principal of the Collegiate School, are, however, entirely distinct.

A detailed Prospectus, containing Syllabuses of all the Courses of Lectures, and all other information, arrangements for boarding, &c. may be obtained by application to the Director.

THE SCHOOL WILL OPEN IN THE FIRST WEEK IN FEBRUARY, 1863.

GALLERIES of the ARCHITECTURAL UNION COMPANY (Limited), 9, Conduit-street, Regent-street, NOW OPEN, FREE, from ELEVEN till FOUR, daily. The Autumn Exhibition of Building Materials, Patents, and Inventions, will CLOSE, FEBRUARY 28, and must then be cleared for the Architectural Exhibition. JAMES EDMESTON, Hon. Sec.

PRACTICAL INSTRUCTION in ARCHITECTURAL MECHANICAL, ORNAMENTAL, and PERSPECTIVE DRAWING; also TAKING OUT QUANTITIES and MEASURING from PLANS and the BUILDING. Day classes, from TEN till FOUR. Evening classes, SEVEN till TEN. Apply to Mr T. J. HILL, Architect, at the Offices, 70, Old-street, City-road.

NOTICE.—Mr. T. J. HILL'S Drawing Classes for the sons and Assistants of Architects, Engineers, and Builders, will RE-OPEN on MONDAY, the 5th of JANUARY, 1863.—Prospectuses at the Offices, 70, Old-street, E.C.

PROVIDENT INSTITUTION of BUILDERS' FOREMEN and CLERK of WORKS, 9, CONDUIT STREET REGENT STREET, W.—The members of the above Institution are particularly requested to ATTEND a GENERAL QUARTERLY MEETING, to be held on WEDNESDAY EVENING, JANUARY 21, 1863, for the purpose of ELECTING OFFICERS, and transacting other important business.

JOSEPH KAY, Corresponding Secretary.

BUILDERS' BALL.

THE ANNUAL BALL, in AID of the FUNDS of the BUILDERS' BENEVOLENT INSTITUTION, under the especial Patronage of the Right Hon. the LORD MAYOR, M.P.; the LADY MAYORESS, the SHERIFFS of LONDON and MIDDLESEX, and the President of the Institution, HENRY LEE, Esq. will be held at Willis's Rooms, St. James's, on THURSDAY, 12th FEBRUARY.

COMMITTEE OF MANAGEMENT.

Mr. T. Cozens.	Mr. J. Morris.
Mr J. Chapman.	Mr. D. Nicholson.
Mr C. Ebl	Mr. G. Plucknett.
Mr. M. Ha l	Mr. T. Sterling.
Mr T. Howard.	Mr. J. Thorn.
Mr. W. Hutchins.	Mr. W. Todd.

STEWARDS.

Mr. F. Bacon.	Mr. Tilson Lee.
Mr. J. Bennett	Mr. J. Long.
Mr. G. Bell	Mr. G. Myers.
Mr. Stanley G. Bird.	Mr. J. H. Notley.
Mr. T. E. Bolding.	Mr. J. Peters.
Messrs. Cubitt & Stanbury.	Mr J. G. Pilcher.
Mr. E. Cutler.	Mr. S. Phillips.
Mr. S. Cuming, jun.	Messrs. Pfeil & Stedall.
Mr. J. Dowell	Mr. R. Richardson.
Mr. W. M. Dunnage.	Mr. T. Robins.
Mr. W. L. Edwards.	Mr. A. A. Robinson.
Mr. C. Forman.	Mr. W. Stirling.
Mr. T. Fergusson.	Mr. T. Thomas.
Mr. R. J. Hickman.	Mr. R. Thomas.
Mr. J. Hibberd.	Mr S. Tuckett.
Mr. J. Jay.	Mr. W. Wood.
Mr. W. H. Jackson.	Mr. T. Yeo.
Messrs. Lucas, Brothers.	

A further List of Stewards will be published.

Gentlemen desirous of promoting the interests of the Institution by becoming Stewards, will please forward their names to the Hon. Sec. Mr. JOSEPH BIRD, 10, Hanover-cottages, Regent's Park; or at the Office, 33, Southampton-street, Bloomsbury.

GEOLOGY.—KING'S COLLEGE, LONDON.—Professor TENNANT, F.G.S. will commence a COURSE of LECTURES on GEOLOGY, on FRIDAY MORNING, JANUARY 23rd, at NINE o'clock. The LECTURES will be continued on each succeeding Wednesday and Friday at the same hour. Fee £2 12s. 6d.

R. W. JELF, D.D. Principal.

WATER COLOUR PAINTERS' LANCASHIRE RELIEF FUND.—The EXHIBITION will remain OPEN ONE MORE WEEK (by the kind permission of Messrs. Day & Son), at the German Gallery, No. 168, New Bond-street, from TEN a.m. till NINE in the evening.

JAMES FAHEY, Hon. Secretary.

Subscribers have free admission to the Exhibition, and one share in the distribution of the prizes, for every guinea subscribed.

Each picture will constitute a prize, and will be declared the property of the subscriber the number of whose receipt may chance to be drawn with it.

As only a limited number of tickets remain unsold, early application must be made to the Secretary, or to the Keeper in the Gallery. The Exhibition must be CLOSED on the 24th of JANUARY.

CHARLES J. ADAMS, } Hon. Secretaries.
H. ATTWOOD REEVES, }

CONTRACTS.

CITY of LONDON, BARBERS' HALL.—Important SITE for WAREHOUSES, or MANUFACTURING PREMISES, at the immediate vicinity of Wood-street, Cheapside. The Committee of the Worshipful Company of Barbers, will meet at their Hall, on THURSDAY, the 29th day of JANUARY, 1863, to receive TENDERS, for letting on a building lease, for ninety-nine years, the extensive PREMISES, known as Barbers' Hall, situate in Monkwell-street, Wood-street, comprising three houses, fronting Monkwell-street, Nos. 33, 34, and 35, part of the courtyard in the rear thereof, the passage leading thereto, and the greater portion of the Company's Hall, together with the kitchen, scullery, and outbuildings, having a frontage towards Monkwell-street of about 83 feet by an average depth of about 116 feet, and an extreme depth of about 155 feet. Full particulars, with a plan of the property, elevation, and section of street front, also conditions of letting may be obtained, on application to the Clerk of the Company; to Mr. CHARLES JOHN HOPPER, the Company's Surveyor, No. 61, Doughty-street, W.C.; or to the Beadle at the Hall.—By order,

HENLEY GROSE SMITH, Clerk.

4, Warnford-court, Throgmorton-street, E.C.

TEDDINGTON, MIDDLESEX.—TENDERS are required for the ERECTION of Two Detached VILLAS on this Estate. Builders desirous of estimating to send in their names, on or before the 22nd instant, to the Architects, Messrs. LAWS & DENNISON, 12, Doughty-street, Mecklenburgh-square.

CONTRACTS.

WAR DEPARTMENT CONTRACT.—NOTICE to BUILDERS, &c.—TENDERS are required for EXECUTING the WORK, &c. that may be required in the following Trades, at Barnsley Barracks, from 1st APRIL, 1863, to 31st MARCH, 1865, viz.: Bricklayers, Masons, Paviors, Carpenters, Plasterers, Slates, Plumbers Smiths, Ironfounders, Painters, Glaziers, Paperhangers, and Gasfitters'.

Parties desiring to Tender for this Contract must leave their names at this Office, on or before the 10th proximo, and pay the sum of 7s. 6d. for the scale bill and form of Tender.

The Secretary of State does not bind himself to accept the lowest or any Tender.

Royal Engineer Office, 23, Stretford-road, Manchester, 14th January, 1863.

BARNSLEY LOCAL BOARD of HEALTH.—Water-Works Department.—CONTRACT No. 2. To Contractors for Pipe-Laying.—The Local Board of Health of Barnsley, in the County of York, are desirous of receiving TENDERS for LAYING DOWN about 11 MILES in length of CAST IRON SOCKET PIPES and other CASTINGS. Specimens may be seen, and Forms of Tender may be had, on application to me, or to Mr. THOS. HAWKESLEY, C.E. 30, Great George-street, Westminster, S.W. on and after MONDAY, the 12th day of JANUARY instant; and Sealed Tenders must be delivered at my office, not later than MONDAY, the 2nd day of FEBRUARY next, endorsed "Tender for Pipe Laying." The Board do not bind themselves to accept the lowest or any Tender. By order,

Barnsley, 6th January, 1863. WM. H. PEACOCK, Clerk to the said Local Board.

TO BUILDERS, IRONFOUNDERS, and CONTRACTORS.—WELSHPOOL SMITHFIELD.—Parties disposed to TENDER for the FORMATION of a SMITHFIELD, for the Local Board for the district of Welshpool, may inspect the Plans, Specifications, and Conditions, at the Office of Mr. ALFRED MEREDITH, Town Clerk, Welshpool, and deputates of the same at my Office, in Bridgnorth, on and after THURSDAY, the 1st day of JANUARY, 1863, until THURSDAY, the 22nd of JANUARY, 1863.

Tenders, sealed up and endorsed "Tenders for Smithfield," must be delivered to the Town-Clerk, Welshpool, on or before THURSDAY, the 22nd day of JANUARY, 1863. The Local Board do not bind themselves to accept the lowest or any other Tender.

ROBERT GRIFFITHS, Architect.

Bridgnorth, December 26th, 1862.

CARDIGAN CORPORATION WATER-WORKS.—To EXCAVATORS, MASONS, and GENERAL CONTRACTORS.—The Waterworks Committee of the Cardigan Corporation are desirous to receive TENDERS for LAYING 3,000 feet of Salt glazed Stoneware SOCKET PIPES, of 9-inch and 6-inch bore; also the CONSTRUCTION of Depositing and Service RESERVOIRS and Works connected therewith. Plans, sections, and specifications may be seen at the Office of the Mayor of Cardigan. In addition to the above, the Committee wish to receive Tenders for laying about 6,000 feet of 9-inch and 4-inch Castiron Socket Pipes and other Castings.—Further information may be obtained on application as above.

Cardigan, January 5th, 1863.

DORSET COUNTY LUNATIC ASYLUM.—To ENGINEERS and OTHERS.—The Committee of Visitors of the Dorset Lunatic Asylum are desirous of receiving TENDERS for the EXECUTION of the various ENGINEERING WORKS and FITTINGS of the said ASYLUM, viz.:—Hot and cold water supply, steam engine for well and pumps, steam cooking, stoves, ranges, grates, heaters, warming fittings, gas works, &c. &c. The drawings, specifications, and conditions may be inspected at Fordington House, near Dorchester, on and after the 14th day next instant. The works are to be done under the direction of the Committee and their Architect, Mr. H. E. KENDALL, Jun. 33, Brunswick square, London. The Committee will not pledge themselves to accept the lowest or any tender, and the contractor will be required to enter into a contract, and to give a bond with a sufficient security, to be approved of by the Committee, in the sum of 1,000l. for the due performance of the contract. Tenders to be sealed up, and endorsed "Tender for the Engineering Works, Dorset Lunatic Asylum," and addressed to Mr JOHN BROWN, Dorchester, Clerk to the Visitors, on or before THURSDAY, the 29th instant.—By order of the Committee of Visitors,

JOHN BROWN, Clerk.

Dorchester, 6th January, 1863.

MID-WALES RAILWAY.—To RAILWAY SUB-CONTRACTORS.—WORKS to LET.—EARTHWORKS, MASONRY, &c.—Messrs. JOHN WATSON & CO. of Westminster, London, are prepared to receive TENDERS for the EXECUTION of the WORKS on the South Division of the above Railway, extending from near Newbridge, in Radnorshire, to within five miles of Brecon, in Brecknockshire. Plans, sections, specifications, and forms of Tender will be ready for inspection on and after the 12th inst. at their Offices in Bulth, and any other information relative thereto will be furnished by Mr. WILSON, Resident Agent. Parties Tendering for greater or lesser portions of the works, must forward them, sealed, and endorsed "Messrs. JOHN WATSON & CO." at their Offices at Builth, and endorsed "Tender for Works," on or before the 24th inst.

Builth, January 10th, 1863.

CIRENCESTER DISTRICT of TURNPIKE ROADS.—CONTRACTS for REPAIRS.—The Trustees of the Cirencester District of Turnpike Roads are prepared to receive sealed TENDERS for the REPAIR of all the ROADS comprised in their Trust (in length 84 miles) for a term of one or more years. Full information as to the quantity and description of stone to be used, the specifications, and form of Contract, may be obtained by application to the Clerks to the Trustees. The stone to be taken for repairs in the immediate vicinity of the roads. Tenders will not be received later than TEN o'clock of the 14th of FEBRUARY next. The Trustees do not pledge themselves to accept the lowest or any Tender.

BEVIR & ELLETT, Clerks to the Trustees.

Cirencester, 14th January, 1863.

[For remainder of Contracts see next Page.

CONTRACTS.

METROPOLITAN BOARD of WORKS.
MAIN DRAINAGE of METROPOLIS.—NORTHERN OUTFALL RESERVOIR.—To BUILDERS, CONTRACTORS and OTHERS. The Metropolitan Board of Works hereby give notice, that they will meet at the Office of the Board, Spring-gardens, S.W. on FRIDAY, the 30th day of JANUARY instant, at TWELVE o'clock at noon precisely, and will then be prepared to open TENDERS by parties who may be willing to CONTRACT for the CONSTRUCTION of a RESERVOIR, with Pumping and Machinery, two Shed, Buildings, a Dwelling-house, and other works in connexion therewith, near to Barking-creek, in the portion of the parish of Woolwich in the county of Kent, north of the river Thames. Parties desiring to submit Tenders may, upon payment of 2l. obtain plans, sections, specifications, form of Tender, and other particulars, on application to Mr. J. W. BAZALGETTE, Engineer of the Board, at the Office, Spring-gardens, between the hours of NINE a.m. and FOUR p.m. or on SATURDAYS between the hours of NINE a.m. and TWO p.m. until THURSDAY, the 29th day of JANUARY. The Tenders are to be addressed to the CLERK of the BOARD, and must be delivered at the Office before FOUR o'clock on the last mentioned day, and no Tender will be received after that hour. The parties Tendering must be in attendance at the Board at TWELVE o'clock on the day appointed for opening Tenders. The Board do not bind themselves to accept the lowest or any Tender, and the party whose Tender shall be accepted will be required to provide two approved sureties for the due and satisfactory performance of the works.
JOHN POLLARD, Clerk of the Board.
Spring-gardens, S.W. 10th Jan. 1863.

BROKEN GUERNSEY GRANITE.—MIDDLESEX and ESSEX TURNPIKE ROADS.—Notice is hereby given, that the Trustees of these Roads are willing to CONTRACT for 500 yards of NEW BLUE GUERNSEY GRANITE, of the best and hardest quality, free from dirt, broken to a gauge of two inches and one-half inch, to be delivered in the month of FEBRUARY next, at Ilford Wharf, Ilford Bridge, Ilford, Essex, and payment will be made for it on the 26th April next. Tenders sealed and endorsed "Tender for broken granite" to be sent to the Office, on or before MONDAY, the 26th instant, from Contractors willing to perform the same, specifying the conditions of such Tender, under the penalty of 50l. the Trustees do not bind themselves to accept the lowest or any offer that may be made to them.
GEORGE DACRE, Clerk to the said Trustees.
Turnpike Road Office, Bow, Middlesex, 15th January, 1863.

BUILDERS desirous of TENDERING for the ERECTION of a PUBLIC-HOUSE, by the river, at Chelsea, are requested to forward their names, together with a deposit of 10s. to the Architect, from whom all further information may be obtained, on or before SATURDAY, the 24th inst. after which time no further application will be received. The requisite number of copies of the bills of quantities will then be provided, and forwarded to each Builder as may have applied and the deposit will be returned.

CONTRACT.—TENDERS are required for the different TRADES in the ERECTION and COMPLETION of a RESIDENCE and ENTRANCE LODGE upon the Hartwell Estate, Burslem, Staffordshire. Parties desirous to Tender can inspect the drawings and specification, with conditions of contract, at the Office of Mr. STEVENS, Architect, 18, Cooper street, Manchester, from the 26th instant to the 29th instant, inclusive; and at the Office of Mr. J. S. FORBES, Cheapside, Hanley, from the 30th instant to FEBRUARY 2nd, inclusive, between the hours of TEN and FOUR, upon which date the Tenders must be left at either of the above Offices, not later than FOUR p.m. The quantities of each trade have been taken out, and can be had upon application.
N.B. The lowest Tender not necessarily accepted.

SEWER'S OFFICE, GUILDHALL, 14th JANUARY, 1863.—The Commissioners of Sewers of the City of London will treat at the Guildhall Tavern, City, on TUESDAY, the 27th of JANUARY, inst. at TWELVE o'clock at noon, precisely, TO DELET and UNDERTAKE the WORKS, at and for the following PRICES per rod. Candidates, who must be practically acquainted with building works, are to send in their applications and testimonials, stating full particulars as to their experience, &c. addressed to the undersigned, on or before THURSDAY, the 22nd JANUARY, instant, and will have to attend a committee for examination as may then be required. The person to whom the work may be given up his whole time to the duties of the office, particulars of which may be had on application as above.
JOSEPH DAW, Principal Clerk.

TO ARCHITECTS and OTHERS.—The Ringwood Burial Board is desirous of receiving PLANS and SPECIFICATIONS for the CHAPELS, LODGE HOUSE, and FENCE WALLS necessary for the intended new CEMETERY. The land measures three acres, is nearly square, abuts the high road, and is near the railway station. The chapels and lodge house to be of, or faced with, rough sawn stone, to be laid in even courses, or rubble stone set in fillence work of brick or brick and stone. The cost of the whole not to exceed 2,000l. The work whose plan is accepted will be apparently the cheapest. The plans and specifications to be sent sealed, on or before the 31st JANUARY inst. under cover to me, of whom further particulars may be obtained.
RICHARD BROWN, Clerk to the Board.
Ringwood, 1, January 6, 1863.

SOUTH-EASTERN RAILWAY COMPANY To BRICKLAYERS, CONTRACTORS, and OTHERS.—The Directors of this Company are prepared to receive TENDERS, from competent Contractors, for the SUPPLY of about FORTY MILLIONS of BRICKS, required for the construction of the Tunnel at Sevenoaks and Polhill, and the new direct line through Mid Kent of the South-Eastern Railway. Specification and plan of the land upon which the bricks are to be made can now be had on application at the Engineer's Office, London Bridge Station.
S. SMILES, Secretary.
Secretary's Office, 8th January, 1863.

TO BUILDERS and CONTRACTORS.—TENDERS are required for BUILDING BOYS, GIRLS and INFANTS SCHOOLS, Kingsland with Dwellings, &c. at Hollingbourn, Kentish Railroad. The plans and specifications can be seen at the Office of the Architect, where the Tenders are to be delivered on the 8th of FEBRUARY. No pledge is given that the lowest or any Tender will necessarily be accepted.
THOS. NICHOLSON, F.I.B.A. Architect.
Hereford, January 16, 1863.

TO BUILDERS and CABINETMAKERS.—Persons desirous of furnishing TENDERS for the SUPPLY of FITTINGS to the new Bank Building, for the Strand and Spalding, and Boston Banking Company, can obtain particulars on application to Mr. WILLIAM EVE, Architect and Surveyor, 3, Union-court, Old Broad-street, E.C.

ST. MARY, ISLINGTON.—To IRONFOUNDERS and OTHERS.—A Committee of the Vestry will meet at the Vestry Hall, Upper street, Islington, on MONDAY, the 2nd of FEBRUARY next, at HALF PAST NINE o'clock in the evening precisely, to receive TENDERS for the supply of and fixing about 80 feet of WROUGHT-IRON RAILING round Islington green; also the supply of and fixing about 100 feet of wrought iron railing of a lighter description in the interior of the said Green. A plan may be seen and particulars obtained upon application to the Surveyor, Mr. PRATT, at the Vestry offices, between the hours of NINE and TWELVE daily. Sealed Tenders must be sent in before the hour of meeting. The Committee do not bind themselves to accept the lowest or any Tender.
JOHN LAYTON, Vestry Clerk.
Vestry Office, Upper street, Islington, January 14, 1863.

NOTICE.—To CONTRACTORS and IRONFOUNDERS.—The Corporation of Cork will receive TENDERS from competent parties for the ERECTION of a CAST-IRON ARCH BRIDGE, of 60 feet span, plans and specifications to be seen at the City Engineer's Office, No. 24, South Mall, Cork. Sealed Tenders to be forwarded to the Town Clerk, Cork, on or before the 20th day of FEBRUARY, 1863, marked on face outside, "Tender for Iron Bridge." The Corporation do not bind themselves to accept the lowest or any Tender.—By order,
ALEXANDER M'CARTHY, Jun. Town Clerk.
Office, 33, South Mall, Cork.

The PRIZE MEDAL for SUPERIOR PATENT SASH and BLIND LINES, was awarded to JAMES AUSTIN, at the INTERNATIONAL EXHIBITION, 1862.
AUSTIN'S IMPERIAL PATENT SASH and BLIND LINES
To BUILDERS, CARPENTERS, and BLIND MAKERS.
J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his
IMPERIAL PATENT FLAX SASH-LINES
of which he is now making four qualities, and he strongly recommends that in all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently cannot give so much satisfaction to the consumer.
They can be obtained of all Ironmongers, Ironmongers, Merchants, Factors, and Wholesale House, in Town and Country.
ESTABLISHED 1774.

and 16, Gresham-street London, E.C.

ST. PANCRAS IRON WORK COMPANY,

OLD SAINT PANCRAS ROAD, LONDON, N.W.

PATENT WROUGHT-IRON STABLE FITTINGS

SHOULD BE ADOPTED FOR THE FOLLOWING REASONS, viz.:—

That the BREAKAGES in Cast-Iron Fittings are numerous, and that one fracture from a kick, or other cause, may occasion an injury to a Horse, and involve a loss equal to the entire expense of fitting up the Stable. The fear of this has led to the use of wood, and, in the case of Cast-Iron GUTTERS, to the adoption of another and less effective mode of draining.

PATENT ENAMELLED TOP PLATE MANGER, WITH RACK AND WATER-TROUGH,

The whole of which, except the Rack, being enamelled, can be kept as clean as a DINNER PLATE.

PATENT FASTENINGS FOR THE DOORS OF LOOSE BOXES.

These Catches and Hangings work easily, are self-acting, and cannot be put out of order: by their use all projections by which horses are often blemished are rendered impossible; advantages peculiarly their own.

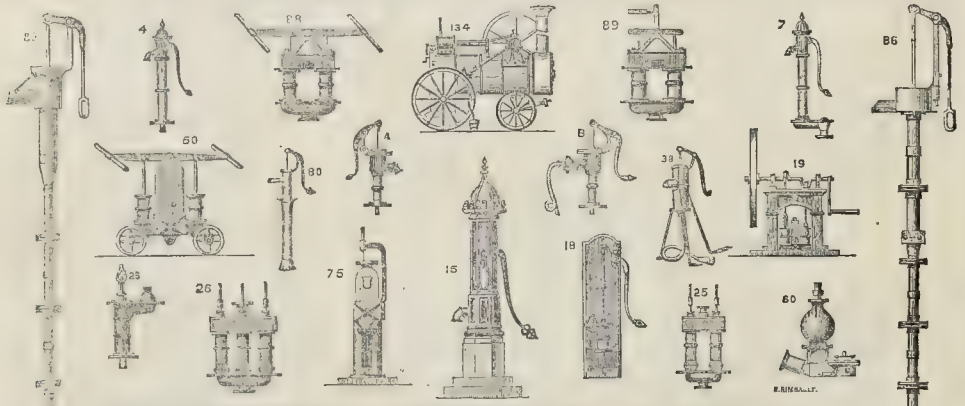
THE PATENT HARNESS FITTINGS

Keep the Harness and Saddles in shape, and are constructed so as to admit the air getting to the underside of them when hung up, thereby insuring a quick and perfect airing from any wet or moisture.

EVERY DESCRIPTION OF STABLE FURNITURE.

ILLUSTRATED LISTS ON APPLICATION TO

ST. PANCRAS IRON WORK COMPANY,



OLD SAINT PANCRAS ROAD, LONDON, N.W.

BENJAMIN FOWLER & CO., WHITEFRIARS-ST., FLEET-ST., LONDON,

3 „	long 3 ft. 6 in.		1 15 0
3½ „	long 3 ft. 6 in.		1 19 0
4 „	long 3 ft. 6 in.		2 6 0
2½ „	ab ve ft. with 16 feet of lead pipe attached, ready for fixing		2 15 0
2½ in.	long ditto, ditto		3 0 0

No. 36½.

WARNERS' IMPROVED CAST IRON LIFT AND FORCE PUMP.

The Barrel lined with Brass.

2½ inch	£2 10 0
3 „	2 15 0

No. 69.

WARNERS' PATENT BRASS VIBRATING STANDARD LIFT and FORCE PUMP, for the supply of Cisterns, &c. is recommended for the simplicity of its construction, and the ease with which it works.

By the introduction of the Vibrating Standard, the cumbrous carriage and expensive slings and guides are not necessary, rendering the price considerably less than Pumps made on the old plan.

2½ inch	£4 4 0	Larger sizes when required.
3 „	5 5 0	
3½ „	6 6 0	

Fitted to the best plank, 5 ft. 9 in. high.

Where strength is not an object, a lighter Pump can be supplied.

2½ inch	£3 10 0
3 „	4 0 0

WARNERS' Rolls can be had of either Copper, Zinc, or Galvanized Iron. Price, from 3l. 15s. each. J. WARNER & SONS also supply all Fittings requisite for the same.

TWO PRIZE MEDALS FOR BELLS HAVE BEEN AWARDED TO JOHN WARNER and SONS, AT THE GREAT EXHIBITIONS IN 1851 AND 1862.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast of any size, note, or weight, singly or in Peals.

TUNED BY MACHINERY.

Old Bells re-cast or taken in Exchange

An experienced Bell-hanger sent to inspect, report, and advise on the state of Peals and Chimes. Estimates furnished for New Oak Frames and Fittings, or for Repairs. Old Frames

House Bells, Hand Bells, Alarm Bells, Sledge Bells, Horse, Cattle, and Street Bells

No. 384. No. 383.

WARNERS' HIGH PRESSURE COCKS

are made with Gland Stuffing Box and Loose Valves. They are always to be had in consequence of their not being liable to wear and rot, both of which are fatal defects in Cocks used with Hydraulic Pressure.

All Warners' Cocks are tested with Hydraulic Pressure.

Patent Self-Shut-Down Cocks, suitable for either Steam or Water, to be attended to by the Officers of Water Companies as an efficient substitute for the ordinary Stone Cock.

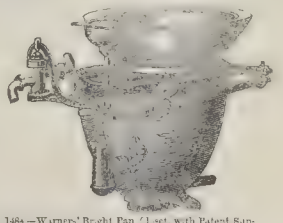
JOHN WARNER & SONS

HAVE BEEN AWARDED A PRIZE MEDAL FOR THEIR NEW CHIMING APPARATUS,

by means of which a lad may correctly play a great variety of chimes upon peals of six, eight, or more bells. Several have since been fixed, and give great satisfaction.

Price and further particulars furnished on application at the Manufactory, 8, Crescent, Cripplegate, London.

JOHN WARNER & SONS desire to draw attention to their PATENT PAN and VALVE CLOSETS, with Supply and Regulating Valve for High or Low Pressure.



The PATENT VALVE is connected with a Bracket, which may be attached either to a Pan or Valve Closet, as desired. The Valve being constructed to close gradually after the handle is shown, gives a sufficient supply of water to cleanse the basin, and leaves enough in the pan to ensure an air-tight joint. Any number of these closets may be fixed to one main or service-pipe.

No 143.—Warners' Spring Valve Closet on Iron Frame, with Galvanized India Rubber Valve, and Patent Supply Valve attached, Foam Handle, and White Basin £4 17 0

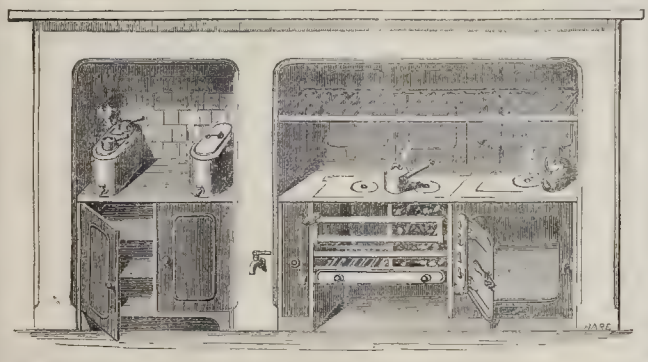
Sunk Handle, extra 0 3 0

Blue Basin, extra 1 6

No 148.—Warners' Bright Pan Closet, with Patent Supply and Regulating Valve attached, Foam Handle, and White Basin £2 0 0

Sunk Handle, extra 0 2 0

Blue Basin, extra 0 1 0



The above prices are subject to a liberal discount.

THE ABOVE ARE WHOLESALE PRICES, SUBJECT TO DISCOUNT.

JOHN WARNER & SONS, 8, CRESCENT, CRIPPLEGATE, LONDON, E.C.

CUNDY'S

PATENT BRICK OVEN WINDING CHECK SEMI-CLOSE KITCHEN RANGE.

This Range will be found very superior to the close Range now in use, inasmuch as it combines the cleanliness of a close kitchener with the perfect ventilation of an open range.

The fall-down bar will be found useful for broiling purposes when the fire is low.

The Ventilator in the Oven Chimney, and also the Register, can be kept open without diminishing the efficiency of the range, thereby entirely removing the great objection and discomfort of all other close ranges, namely, the sulphurous and excessive heat in the kitchen, and the smell of cooking all over the house.

The great advantage of a brick oven is, that it absorbs the steam given out by bread or meat in the process of baking; consequently the latter is totally free from the disagreeable flavour too evident in meat baked in an iron oven.

As the fire of this range can be diminished or enlarged at pleasure, it can (when not in use for roasting) be wound up within 6 inches of the oven, and still be used for baking, also for boiling upon the hob over the oven, thereby effecting a considerable saving of coals.

THIS RANGE,—ALSO CUNDY'S PATENT BRICK OVEN DOUBLE FALL-DOWN BAR KITCHEN RANGE, and CUNDY'S PATENT COTTAGER'S KITCHENER,—can be seen in operation at the Show Rooms of THE MANUFACTURER,

WILLIAM ADDIS,

WHOLESALE AND RETAIL IRONMONGER, AND STOVE, GRATE, AND RANGE MANUFACTURER,

6, 7, and 15, LEICESTER STREET, LEICESTER SQUARE,

Where Mr. CUNDY can be gratuitously consulted, personally, or by letter, relative to the cure of Smoky Chimneys.

IRON ROOFING of CORRUGATED IRON, Wrought Iron, principal Roofs covered with Slates, Iron Bridges, Girders, and Railings; also Portable Buildings for Dwellings, Farm Purposes, Churches, Chapel Schools, Theatres, Concert or Dancing Rooms, &c. suitable to all Climates, fixed complete in town or country, or packed for exportation.

For Designs and Estimates apply to

RANDAL STAP, Contractor,

No. 32, KING WILLIAM STREET, E.C.

Where numerous Drawings and Photographs may be seen.

N.B. The Iron Buildings manufactured by R. STAP are not fixtures on Leasehold Property.

CAUTION to ARCHITECTS and BUILDERS.—In consequence of complaints arising from the substitution of INFERIOR and SPURIOUS ARTICLES instead of

SMITH'S PATENT DOUBLE ACTION DOOR SPRINGS;

SMITH'S PATENT WEATHER-TIGHT WATER BAR; and

SMITH'S PATENT WEATHER-TIGHT CASEMENT FASTENING for FRENCH WINDOWS;

The above are most respectfully requested to observe that all GENUINE ARTICLES are stamped with the NAME and ADDRESS, SMITH, Patentee, 6*, Princes-street, Leicester-square, London, and SUCH ONLY are WARRANTED.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER, at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his stock of Ironmongery, Brass Founders, Nails (wrought and cut), Copper, and Zinc, Patent Locks of all descriptions, China, Glass, and Wool Furniture, of all kinds, with Patent Smoke Apparatus; Dr. Arnott's Ventilators, &c.; and the New Registered Vertical Ventilator, so much admired, 5s. 6d. each.

J. H. BOOBBYER (late STURCH & BOOBBYER), established nearly 200 years, for the supply of GOODS of the BEST MANUFACTURE, at the LOWEST PRICE.

14, Stanhope-street, Clare market, London.

VIEILLE MONTAGNE ZINC.

THE ITALIAN-FORMED ZINC is much approved of by Architects and Engineers on account of its strength, durability, and appearance. On account of the light framing required, roofs, including framework and fixing, can be covered with it FOR £3 PER SQUARE up to 25 feet span. Sheds of larger span, including posts, 4*l.* per square. Architects are cautioned against allowing anything thinner than No. 13 gauge (20 oz.) to be used. ALL PLATES SHOULD BE REJECTED NOT BEARING, in addition to the Company's name, the words "ROOFING ZINC," and the gauge. OLD ZINC RETAKEN AT HALF THE MARKET PRICE OF NEW.

For Designs and Estimates for Roofs, with Timber or Iron Framework, IRON CHURCHES COVERED WITH ZINC, and Buildings for the Colonies, apply to

THE COMPANY'S SURVEYOR,
12 MANCHESTER BUILDINGS, WESTMINSTER, S.W.

INTERNATIONAL EXHIBITION
1862.

LITHOGRAPHED DESIGNS OF CEILING FLOWERS, &c. SENT FREE ON APPLICATION.
AGENT IN IRELAND MR. CHARLES LAURANCE, 21, SOUTH MALL, CORK.

BIELEFELD & THOMAS,

PAPIER MACHE WORKS, 21, WELLINGTON-STREET, STRAND, LONDON,

ESTABLISHED 1826,

Request the attention of Architects, Builders, Decorators, &c. to their VARIED and EXTENSIVE STOCK of ENRICHMENTS, CENTRE FLOWERS, VENTILATORS, MOULDINGS, CORNICES, PILASTRES AND PANEL DECORATIONS, &c. &c.

DESIGNS AND ESTIMATES GIVEN FOR THE ENRICHMENTS IN PUBLIC OR PRIVATE BUILDINGS. ENGRAVED DESIGNS FOR VENTILATORS, CEILING, FLOWERS, &c. SENT FREE ON APPLICATION. PRINTED PATTERN BOOKS, WITH PRICES, CAN BE OBTAINED AT THE WORKS.

UNIVERSAL EXHIBITION, PARIS, 1855.
First-class Medal awarded to T. COOKE, for "ASTRONOMICAL INSTRUMENTS."
INTERNATIONAL EXHIBITION, LONDON, 1862.
Prize Medal, "EQUATORIAL TELESCOPES, for their excellent Object Glasses, and Equatorial Mountings."
Prize Medal, "CONSTRUCTION and FINISH of TURRET CLOCKS, Gravity and other Escapements."

T. COOKE & SONS,

BUCKINGHAM WORKS, YORK,
ASTRONOMICAL, MATHEMATICAL, AND HOROLOGICAL INSTRUMENT MAKERS,
Have the honour to announce that they have opened an Establishment at
31, SOUTHAMPTON STREET, STRAND, LONDON, W.C.

For the greater convenience of their numerous Patrons in the Metropolis and its neighbourhood. They beg to solicit attention to their Stock, consisting of Astronomical, Meteorological, Nautical, Surveying, and Drawing Instruments, Pocket and Marine Telescopes, Opera and Tourists' Glasses,
SPECTACLES AND EYE-GLASSES.
They also beg especially to invite the attention of ARCHITECTS to their
TURRET CLOCKS,
Amateurs' Lathes, Turning Apparatus and Tools, Planing Machines, Wheel-cutting and Dividing Engines.
Estimates given for Work in any of the above branches, and for the Erection of Observatories.

Now Ready, TENTH THOUSAND, with Portrait, 8vo. 10s. 6d.
D.R.D.
THE PRINCE CONSORT'S PRINCIPAL SPEECHES AND ADDRESSES:
WITH AN INTRODUCTION GIVING SOME OUTLINES OF HIS CHARACTER.

METEOROLOGY.
Just Published,
A REPORT of the WEATHER of 1862, with Tables and Statistics of 6 past years. By THOMAS F. PLANT, M.R.M.S. Compiled from Returns made to the Astronomical Society. Post paper, 2s. 6d., free for 34 stamps.

Just published, for 1863, price 3s. the fifty-third Edition of SKYRING'S BUILDERS' PRICES, calculated from the prime cost of materials and labour, to do justice to employers, master builders, and workmen, containing the whole of the Metropolitan Buildings Act, and a variety of new and useful information.
Sold by SIMPKIN & CO. Stationers'-court, London, and may be had of all Booksellers.

Demy 12mo. cloth, price 4s. post free 4s. 6d.
LAXTON'S PRICE BOOK for 1863, for ARCHITECTS, ENGINEERS, BUILDERS, CONTRACTORS, SURVEYORS, &c. established 1850, containing with a variety of new and useful matter now first published, the Prices obtaining all the year in Lots contracted with the Specifications of the Architect, Engineer, Builder, Contractor, and Surveyor; together with much valuable and important Memoranda relating to the same. Also, full descriptions of various Stones for Building from the Quarries of England, Scotland, and Wales. Instructions for Estimating and Contracting. Calculations and Sketches of Cast and Wrought Iron Girders, Columns, &c. &c. The whole carefully revised and corrected to date of publication.
OFFICE, 12, WARWICK COURT, GRAY'S INN, HOLBORN, LONDON, W.C.
Supplied by all Booksellers in Town and Country.

LONDON: How the Great City Grew.
By GEORGE ROSE EMERSON.
Fcap 8vo cloth, 2s. 6d.
London: ROUTLEDGE, WARNE, & ROUTLEDGE, Farringdon-street.

BUILDER'S PRICE LIST BOOK, 1863.
Price 2s. 6d.
WILLIAM DAWBARN & CO. Liverpool, have now ready their Builder's Price List Book for 1863, containing the prices of all Building materials, bricks, slates, iron-ware, tiles, stone, glass, &c. &c. made up and corrected to the present date. The book contains sundry designs and useful calculations for builders generally.
The price is 2s. 6d. to those who have no account open with W. D. & Co.; but to parties desirous of opening an account, on giving satisfactory references, can have a copy posted free.
Prices current of Timber and Deals are issued monthly, and may be had on application.

Now ready, 12mo. strongly bound, price 4s. (postage 4d.)
THE BUILDER'S and CONTRACTOR'S PRICE-BOOK (Lockwood's, formerly Weale's) for 1863.
Revised by G. R. BURNELL, Esq. C.E.
This book is now the universal by-proposed arbitrator in the settlement of disputed accounts. The present edition has been thoroughly revised by a well-known practical architect and engineer. Not being printed from stereotype plates year after year, as is the case with some books of the kind, errors are not perpetuated, and the opportunity is taken in every reprint to introduce current prices and other desirable improvements.
London: LOCKWOOD & CO. 7, Stationers'-hall-court, E.C.

"THE BUILDER."—FOR SALE, a COMPLETE SET from the commencement to the end of year (1862), nineteen volumes, handsomely bound in half-calf. Price 10*l.* 10*s.* Address, Y. S. Lundley's Advertising Office, 19, Catherine-street, W.C.

Now ready, roan tuck, gilt edges, price 6s. (postage 4d.),
THE ENGINEER'S, ARCHITECT'S, and CONTRACTOR'S POCKET-BOOK (Lockwood and Co.'s, formerly Weale's) for 1863; greatly improved, with many new Tables, and much valuable and useful matter.
London: LOCKWOOD & CO. 7, Stationers' Hall-court, E.C.

The Builder.

VOL. XXI.—No. 1041.

District Surveyors and the Metropolitan Board of Works.

DISTRICT SURVEYOR of twenty-five years' standing has been suspended by the Metropolitan Board of Works for what they consider non-performance of the duties of his office. The broad outline of the case, so far as we know, appears to be this:—Two small houses, each having two rooms on a floor, front and back, were erected in Stepney, with a large open area behind. When the houses were built the inclosure-walls at the back were put up in such a way as not to give to each house an area of 100 square feet. Section 29 of the Building Act says, it will be remembered, that,—

> "Every building used, or intended to be used, as a dwelling-house, unless all the rooms can be lighted and ventilated from a street or alley adjoining, shall have in the rear or on the side thereof an open space exclusively belonging thereto of the extent at least of one hundred square feet."

Complaints were made to the builder of the houses, and, in consequence, he removed the door, on each floor, between the two rooms, and made an opening about 4 feet 6 inches wide, so as, nominally, at any rate, to turn the two rooms into one, "lighted and ventilated from the street." A neighbour wrote letters to the district surveyor on the subject, and ultimately to the Board of Works. A correspondence ensued, the district surveyor replying to the allegation, that the builder had complied with the words of the Act, whatever might be the case as to the spirit of it. Interviews took place, and after a long pause he received intimation one Thursday that, at the meeting to be held on the following day, the Board would proceed to consider a report from their Building-Act Committee, recommending his suspension from office for one month. The Board met, and, in lieu of carrying out the recommendation, suspended him for *three* months: in other words, then and there inflicted on him a penalty equal to one hundred pounds.

We shall not be suspected by any of our readers of attaching no importance to the clause evaded by the owner of the houses in question. The efforts of the *Builder* in the cause of sanitary improvement and good structural arrangements, are too well known, we hope, to permit such a belief. To obtain an open area in the rear of houses for the purposes of light and ventilation, is of the utmost consequence, and the district surveyors are bound to do their utmost to obtain it. But the question here is not what the district surveyor thought right and desired to have, but what he could enforce; and our strong impression, indeed conviction, is that, if the facts be as conveyed to us, it would have been useless to take the case before a magistrate. Magistrates have already stated that although the Act requires the rooms to be lighted and ventilated from a street or alley adjoining (or to have an area at the back), the clause is not contravened if the back room be so lighted and ventilated through the front room. In the case of the District Surveyor of Bethnal-green against Raven, who had not provided the required area at the back, Mr. Hammill, the sitting magistrate, suggested that the builder should remove the partition which divided the front room from the back room on the different floors, so as to meet the requirement of the Act, and this was done. In a more recent case in Marylebone, the district surveyor having summoned a builder for not providing the proper area, the sitting magistrate suggested to the builder to get over it by substituting a glass door for the deal one between the two rooms.

That the means of evasion should exist is much to be deplored; but in the face of these and similar decisions, we can well understand the feeling on the part of the district surveyor in the case which has led to his suspension, that it would be useless and unwise to take the builder before a magistrate,—unwise, because every case in which a district surveyor is defeated, weakens his position.

We are not writing in the interest of the district surveyor. Personally, we have not the pleasure of knowing anything of him beyond the fact of his unquestioned integrity. But in the interest of sound building and the discharge of a public duty, we would remind the Board of Works that the Building Act is not a popular Act; that it is full of difficulties; that the district surveyors are *their* officers; and that it might be desirable rather to counsel and strengthen than hastily to injure and degrade. We happen to know well the difficulties of the position of district surveyors, their intelligence and worth as a body, and their anxiety to discharge properly the duties of their office; and we would express a hope that the Board of Works will not seek to render these more hard to compass than they are.

With reference to the prevention of the occupation of underground rooms, it is much to be regretted that the Metropolis Local Management and Amendment Act, so far from rendering the existing legislation more effective, is calculated to keep it inoperative. The Local Management Act, setting forth that no underground room or cellar may be "occupied separately as a dwelling" unless it possesses certain described requisites, calls upon the district surveyors to report periodically, without fee, to the Metropolitan Board and to the vestries "all cases in which rooms or cellars are occupied contrary to this enactment" in their several districts. It has been shown again and again by published statements, memorials, and otherwise, that it is aside the duties of a district surveyor, and, indeed, quite out of his power, to obtain evidence as to what underground rooms are "occupied separately" as dwellings, and that the duty involved should at any rate be divided, the parish authorities obtaining, by means of the police or otherwise, evidence of the occupation, and the district surveyor then reporting whether or not the rooms so occupied are in accordance with the requirements of the Act. So far, however, from the Amendment Act remedying the error, as was proposed by the Metropolitan Board in their draft Bill, it confirms the original arrangement, with the specific instruction, that the district surveyor shall report "in the months of June and December in each year, and at all other times when he shall be required so to do." The result must be, that the section will remain inoperative. A district surveyor can of course report, on examination of an underground room, whether or not it possesses the requisites for a dwelling set forth in the Act; but he cannot give sufficient evidence as to the occupancy of the room as a dwelling within the meaning of the Act. The discharge of the first part of the duty, without remuneration, falls with severity on the surveyors, especially in the central districts, where many underground rooms are inhabited, and the surveyor's receipts for his ordinary structural duties are very small; but the efficient discharge of the latter part is out of their power.

NEW MATERIALS FOR THE LIFE OF JOHN FLAXMAN, R.A.

My father brought a full-stored mind to the life of the greatest of English sculptors—John Flaxman. He himself knew Flaxman,—had heard him deliver his lectures before the Royal Academy,—was always a curious inquirer about the ways of the man he admired,—and sat down to his work with a determination to write a life that would live. Nor was he content with such advantages alone. He sat with the great sculptor's sister and sister-in-law (Miss Flaxman and Miss Denman, his nearest surviving relations), talked unreservedly with them about our English Poidias, and made Boswellian notes before them, which he enlarged at home. He questioned Flaxman's great rival in his latter life—Sir Francis Chantrey,—and Sir Richard Westmacott, his competitor, in the full swing of his mid-career reputation. Chantrey knew little about Flaxman; but that little, from so observing a man, was all to the point. What Westmacott had to tell (or rather had not to tell) I have often heard my father relate with a smile, always ending in a hearty laugh at Westmacott's idea of the wants of biography. "I called on Westmacott, in South Audley-street, by appointment," my father was wont to relate, "note-book in hand. He knew the object of my visit. 'I wish I could tell you,' said Westmacott, 'anything about Flaxman that would be of use to you in your work; but I cannot. Flaxman, sir, lived as if he did not belong to the world; his ways were not our ways. He had odd fashions; he dressed—you know how he dressed; he dined at one; wrought after dinner, which no other artist does; drank tea at six; and then, sir, no one ever found him in the evening parties of the rich or the noble: he was happy at home, and so he kept himself. Of all the members of the Academy, the man whom I know least of is Flaxman.' In this way," my father was wont to observe, "Westmacott continued to talk to me about Flaxman. He answered all my questions directly and to the point. You will readily guess," he would end by saying, and with a hearty laugh (still pleasantly ringing in my ears) "Westmacott's notion of the wants of biography. I thanked him and withdrew. I had obtained, unknown to Westmacott, the very information I wanted from him."

When Chantrey was little or nothing more than a raw Derbyshire lad in London, working in clay, with slender prospects of translating his labours into marble, he went to the Royal Academy exhibition, then in Somerset House, and made his observations, catalogue in hand. When Chantrey approved, he was always emphatic in his approval:—

> "Fools admire, but men of sense approve."

Against Flaxman's statue of Sir Joshua Reynolds, now in St. Paul's, then only a small-sized model, he has written "fine," in large blacklead letters. The influence of this very fine statue on Chantrey may be traced in the very best of Chantrey's works.

The story of the noble portrait of Flaxman, by John Jackson, R.A. (lucky man, he painted Canova as well, and for Chantrey), was given to my father by George Agar Ellis, afterwards Lord Dover, in a long memorandum in his own handwriting before me while I write. "In 1824 and 1825 (I think), Mr. Jackson painted for me the magnificent head of Flaxman—probably his finest work—in which the chiaro-scuro of Rembrandt is united with the colouring of the greatest masters in that art. The origin of the painting of this picture is as follows:—At the Academy dinner, in, I think, 1824, I sat at table exactly opposite Flaxman, and was so much struck by the intelligence of his eye, the placid benignity of his countenance, and his venerable head, that I became anxious to see those characteristics worthily represented in painting. In going downstairs, I found myself next to Jackson, and said to him, 'I never was more struck in my life than by the countenance of Flaxman,—you must paint him for me.'" Lord Dover adds,—"After the great success of the portrait of Flaxman, I gave Jackson a commission to paint a head of Chantrey, which was not quite completed when he died."

Flaxman's letters, as autograph collectors know to their cost, are of rare occurrence. Here is one unknown to Flaxman's biographers:—

"To Prince Hoare, esq., Secretary for Foreign Correspondence, Royal Academy of Arts.

[London, 1803.]

DEAR SIR,—The public monuments which I am doing, by order of the King and Parliament, are two; one to the memory of Captain Montague of the ship *Montague*, who fell in the naval engagement on the 1st of June, 1794, in which Admiral Earl Howe commanded, and defeated the French fleet.

The monument is to be insulated, and to stand under an arch in the nave of Westminster Abbey in such a manner that the spectator may walk round it. Captain Montague rests on his sword and stands on a pedestal adorned with naval flags Victory, on a globe behind him, waves over his head the laurel crown which he did not live to wear. On the pedestal is a bas-relief representing the engagement; and a lion on each side of the pedestal guards the basement. On the back of the pedestal, under the trophy, is a bas-relief of prisoners. The statue of the captain is 7 feet 2 inches high, and the whole work will be 20 feet high from the ground.

The other monument is to the memory of Admiral Earl Howe, commander-in-chief in the above engagement, who, having rendered a series of essential and brilliant services to his country, died at home in peace, at an advanced age, beloved and regretted, particularly by the navy. The principal figure is the earl in a naval uniform and boat-cloak, with a telescope in his right hand, resting on a rostrated pedestal, on which Britannia is seated as the guardian both of herself and trophies. Fame writes his achievements in golden letters on the pedestal. Victory [without wings] leans, like a sister, on the shoulder of Fame, beholding with delight the record of her hero's deeds, while with her other hand she places the garland in the lap of Britannia. The British lion watches by the earl's feet. This monument is to be placed in a distinguished situation in St. Paul's Cathedral. The statue of Earl Howe will be 7 feet 6 inches high; the rest of the work will be magnificent in proportion, both in size and decoration. Concerning the bust of Ceres, of which you inquire, I have seen it and made drawings of it. When entire, it was a statue made of two blocks of marble: including the basket she supported on her head, the whole must have measured 16 feet in height; but as a slight sketch will give a better idea than a laboured description, I have taken the liberty to trouble you with one,* which you may, if you please, send to the President of the Academy of Vienna, with my respectful compliments. The original is quite a ruin, as you will perceive by the sketch. The face is gone. It is 6 feet 10 inches high, from the bottom of the girdle zone to the top of the basket. It is now set up in the Public Library at Cambridge. I have examined the ancient authors, but have found no mention of the statue. Pliny says nothing of it; Vitruvius says nothing of it; nor Pausanias. Strabo says the temple was erected by Ictinus, under Pericles. It is certainly a work of the time of Phidias, of an elevated beauty, and powerful execution, but I think it must be evident that Phidias could not have done all the works attributed to him, unless he had possessed as many hands as Briareus.—I am, dear sir, &c., JOHN FLAXMAN.

There is a passage in my father's Life of Flaxman which the following note from a careful and very severe corrector of slips of the pen in print will serve in some measure to set right:—

To Allan Cunningham, esq.

"Molesey Grove, Hampton Court,
31st March, 1835.

DEAR SIR,—In re-reading your Life of Flaxman, I observe, p. 311, a statement and an anecdote which imply that Flaxman had not left Rome till after the irruption of Buonaparte into Italy. This, I think, must be a mistake. Your book does not, indeed, state the *exact* time of Flaxman's return, but you say that he *went* in the spring of 1787, and remained seven years, this would bring the return to 1794. Now it was not till the autumn of 1795 that Buonaparte's name ever was heard of, and it was not till the spring of 1796 that he crossed the Alps.

If you will look at the passage, you will see that this matter involves inaccuracy, and consequently the credit of the work; and, as *I* cannot account for the mistake or anachronism, I have thought proper to mention it to you, that it may be corrected or explained in a new edition.—I am, dear sir, faithfully yours, J. W. CROKER."

On the receipt of this letter my father wrote to Miss Flaxman, and to what purpose the following answer will fully tell:—

To Allan Cunningham, esq.

"74, Upper Norton-street, April 7th [1835].

DEAR SIR,—I was much surprised at receiving a letter addressed to Miss Flaxman, as it is now nearly two years since I lost that dear and valued friend.

In reply to your letter, I will take upon myself with pleasure to answer your question, as there are few circumstances in my brother-in-law (Mr. Flaxman's) life that I am not well acquainted with, having been his and my sister (Mrs. Flaxman's) constant companion ever since their return from Italy in 1794, till the very last moment of their earthly existence.

In answer to your question concerning the medal,—It was some years after Mr. Flaxman's return from Italy that he first saw the medal of Buonaparte at a friend's house in London, and he always said and thought that the profile of Buonaparte, during his early career, bore a strong resemblance to Augustus Cæsar."

We come now to a grievance of five years' standing. Miss Denman continues:—

"I regret that when you favoured Miss Flaxman and myself with a visit, previous to the publication of my brother's Life, you did not avail yourself of our offer of looking over it, as we could have pointed out to you many errors which are now in it.

I also greatly regret that you made use of any part of those two works from which you have made so many long extracts. They were never intended for the public, and when I showed them to you I most expressly said:—'These are private works; they were made for the gratification of my sister: now they are mine, I hold them sacred, and I only show them to you that you may the better understand the character of the man whose Life you are writing; and I must beg you will not make any other use of them in the work you are now writing, as I do not wish them to be made public. If, at any future time, I may have reason to change my mind, I shall then bring them out in a way most congenial with my own feelings, and in a way that shall not detract from the fame of the great and good man;' and you then promised you would not.

I was so much hurt by this breach of confidence that neither Miss Flaxman nor myself could at that time thank you as we otherwise should have done for your kindness in sending us your little interesting volume.—I remain, dear Sir, yours truly, MARIA DENMAN."

What promise, if any, as Miss Denman alleges, my father made I cannot tell, nor can I see aught but a good service rendered to Flaxman's memory in the way the story of the "two works" is told in Flaxman's Life. My father was never in possession of the volumes; the extracts made were made in Miss Denman's house, and, if my memory does not err, in Miss Denman's presence. The lady, somewhat difficult to please (as I know by my own experience of her when I was honorary secretary to Watson's fine statue of her brother), relented ere long, re read the Life, and transmitted to its author such queries and notes as occurred to her. These annotations (new and of moment) I purpose giving in a second communication; here, however, I may relate what Stothard told my father, in Chantrey's studio,—"I have read," said Stothard, 6th July, 1839, "your Life of Flaxman, and am much pleased with it." "Mr. Flaxman," Miss Denman records in her own handwriting, "had the highest regard and friendship for Mr. Howard, both as an artist and a man; but his old friend Stothard he could only admire—as an artist." Why? PETER CUNNINGHAM.

OF THE INFLUENCE OF FASHION IN ARCHITECTURE.*

"Fashion constantly begins and ends in the two things it abhors most, singularity and vulgarity. It is the perpetual setting up and then disowning a certain standard of taste, elegance, and refinement, which has no other formation or authority than that it is the prevailing distraction of the moment; which was yesterday ridiculous from its being new, and to-morrow will be odious from its being common."—HAZLITT.

A POPULAR feeling has exhibited itself, far and wide, in favour of an inappropriate adoption of colour in lieu of form. This new feature has been very properly denounced, and termed the piebald, petrified chessboard, or harlequin style, and consists of an indiscriminate employment of black, white, yellow, and red bricks, in arches, bands, diapers, and strings, which have lessened the use of architectural mouldings and other beautiful forms.

The system of rendering buildings all the colours of the rainbow should be avoided, as it entirely destroys form. It has actually been propounded by an architect that "if we wanted colouring in a building, we must give up the mouldings, or *vice versâ*: for his own part, he would always give up the mouldings!" For my part, I would dispense with the *daubing*, and retain all mouldings and architectural forms and features in their integrity. "I believe," says Professor Westmacott, "that colouring sculpture is one of the greatest mistakes that can be committed. Sculpture represents by *form*, and form alone: painting is a distinct art: the mixture of the two, in sculpture proper, is meretricious and false, however pretty some people may think it."

There are many interesting examples remaining of cornices, window-dressings, and chimney shafts, executed in moulded brickwork, in mansions of the time of Henry VIII., William III., George II., &c., well worthy of being studied; and they serve to prove how successfully mouldings can be embodied in brickwork, without having recourse to parti-coloured brickwork to their total exclusion.

Red stocks alternating with grey stocks present no new feature in art: the fashionable use of them, therefore, does not consist in their novel introduction, but the nonsensical abuse of them. The harsh contrast between red bricks and stone has been condemned years ago; and the heavy colour of the bricks is considered unpleasing in itself. The absence of proportion and taste in design at the present time may be readily discerned (without naming individual examples), by reference to the illustrations in the recent volumes of the *Builder*. There are, however, occasionally many beautiful examples of red brickwork to be met with.

I attach great importance to mouldings in fine-art architecture, and consider them to be the alphabet of each period. If colour must be introduced, let it arise out of the blending of natural and varied marbles. Mouldings in this case will be of advantage rather than otherwise: they will serve to separate the prominent coloured marble surfaces from each other, by marbles of various colours as practised by the illuminators during the Middle Ages, and by the Roman architects in their buildings, which were renowned for the many beautifully coloured marbles employed in their construction. In the Pantheon at Rome, as is well known, the internal entablature is of white marble and porphyry, and the columns are of yellow antique marble, with capitals and bases of white marble: the surface of the piers is also incrusted with thin slabs of marble of various colours.

During the Classic and Mediæval periods, windows, doors, and other openings were suitably and therefore usefully ornamented with mouldings, grouped in cornices, architraves, jambs, arches, &c., forming important features in public and private edifices; but recently it has become the *fashion* to forego these decorations, and to construct buildings with red brick string courses, red brick arches, and to introduce red brick peculiarities of endless unmeaning and incongruous patterns, not limited to secular buildings, but employed in churches, chapels, and other important works. This I consider a retrograde movement, or at least no advancement in the direction calculated to create a new style of architecture. In the course of a few years the atmosphere of London and large cities will so deaden the red and other coloured bricks, that only one dark tint will remain; and in all those buildings in which mouldings and other architectural features have been discarded, naught will remain but the pierced openings of doors and windows. This to me appears so self-evident that too much public attention cannot be directed to the fact. To depend wholly upon colour without mouldings in external brickwork must lead to disappointment; but if when a pointed red brick arch is introduced over a pointed or semi-circular opening, a brick or stone label be put immediately over the red brick, a permanent architectural feature is preserved. In like manner, if red panels be sunk or raised, the forms are retained: not so, however, when they are simply surface shams.

The attempt to force upon the profession and the public polychromatic decorations has not been successful, either in architecture or sculpture. The Classic authorities have been diligently searched, and the beautiful remains of early art closely examined, with a view to prove that

* Flaxman's drawing was engraved by his friend William Blake for the "Academic Annals."

* By Mr. W. Pettit Griffith, F.S.A., read at the Liverpool Architectural Society, on the 14th inst.

Grecian architecture and sculptures were coloured In after ages the Romans employed more colour than the Greeks: there, however, is no doubt that whatever colour the Greeks applied was most sparingly used,—often as a groundwork only for gilding, and without detriment to their beautiful forms; and that the idea (promulgated by some) that Classic edifices were painted with blue, red, yellow, and sea-green colours, and that the statues were of a flesh colour, with artificial eyes, red eyebrows, red and brown hair, &c., has not been yet satisfactorily proved; and if it ever be substantiated, instead of raising art in the minds of educated persons, it will only certify that the taste of the ancients was not so pure, so simple, and so chaste as its admirers have ever considered it to be.

The treatment of colour in architecture requires great thought and consideration; and although a harmonious whole has to be realized, still the characteristic details and mouldings must be well marked and brought out in agreeable relief. The Greeks treated their sculptures and mouldings with care, and sought by their use to heighten the effect of the architecture, rather than subdue it with heavy colouring: a pleasing light and shade must be always kept in view.

The colour imparted to the interiors of continental buildings by coloured marbles contrasts greatly with the cold Portland-stone tint of St. Paul's Cathedral and many other public buildings in this country. At the period when St. Paul's Cathedral was erected it was incorrectly imagined that the ornamentation of the cupola with mosaic work, similar to the cupola of St. Peter's in Rome, would have been too expensive: resort was therefore had to the perishable substitutes of painting and gilding. This gilding, it appears, was intended only to serve until such time as suitable materials could have been procured. It is much to be deplored that, instead of painting and gilding the interior of the building, sufficient funds were not raised for ornamenting the inside of the cupola with the more durable mosaic work, which would have lasted as long as the building itself, as well as freely to have introduced coloured marbles.

The marbles of Devonshire and the west appear boundless in variety. The isles of Man and Anglesea abound with marbles; also Darington, near Hereford. Considering the beauty and durability of mosaic work, it has been considered a matter of surprise that it should for so long a time have escaped the attention of our native artisans. The marbles and ornamental masonry of the British islands are well worthy of attention.

In a city atmosphere, and with gas in a building, the gilding cannot be preserved beyond a very limited period. Besides, would it not have been desirable, prior to internal painting and gilding, to have thoroughly restored the external decomposed mouldings, broken capitals, and vases, and the statues, which must ere long receive attention? Considering the vitiated atmosphere of London, the exterior stonework of St. Paul's is in an excellent condition; nevertheless, all the joints of the masonry of the pediments are open, and there is much external repair wanting to preserve the building; and funds could not, I feel assured, be expended upon more needful and important matters.

Apart from the question of the durability of the painting and gilding in St. Paul's, it is but fair to state that the latter have been accomplished with great care and in excellent taste, and with every attention to the development of the mouldings and ornamentation.

It has been recently pronounced *ex cathedrâ*, that principles never change: there may be new combinations, new excellencies, new paths, new powers; but there can be no new principles in art. This is no doubt correct, and should be borne in mind, although it would be more instructive to art-students if these principles were more clearly enunciated.

Sir Christopher Wren's idea of principles seems to have been limited to the "five orders." "It" [architecture], says Wren, "aims at eternity; and therefore is the only thing incapable of modes and fashions in its principles (the orders), which are founded upon the experience of all ages."

Art-principles, unless founded upon nature, are ever varying: the most eminent modern architects never agreed as to the proportions of any one of the five orders: in the height of the Tuscan column alone they differed by three modules.

In the works of Nature there is not any portion of the framework, however minute, which does not appear to have been developed upon perfect principles: in fact, the more we study each object, let it be either animal, vegetable, or mineral, the more there is to admire; each part being in its place, and having its duty to perform; all interference with regularity being occasioned through abortions or degenerations, forming the exception and not the rule.

There is some satisfaction in studying the works of Nature: the truths we learn are eternal; but in architecture new influences create new fashions, and a style which has occupied hundreds of years and the skill of the greatest artists to perfect, is liable to be spurned in a moment for any new and crude style that may be introduced.

The reflection is somewhat humiliating that architecture is amenable to new fashions, like women's costume and fancy dogs. When the painter shadows forth a landscape, and the sculptor idealises, in marble, human life, their works are as truthful in a thousand years hence as they are this day: no differences of opinion or new fashions can alter them: they represent Nature's works, and are consequently eternal.

Sculpture, however, is sometimes influenced by fashion. In London and elsewhere may be seen statues of eminent men, executed not many years ago, in the Roman costume, with the toga, &c. Our statesmen are now more appropriately represented attired as they lived. I pointed this out in the year 1839, when competing for the Nelson monument. Ridiculous as the figure of George III. may appear in Pall-mall with a pig-tail and cocked hat, still it is a true record of the fashion of the day. All sculptured and other records in stone or metal should be truthfully portrayed, so that future antiquarians and historians can at once fix the period of their execution.

Fashions have generally been produced to conceal defects, or to exhibit some of Nature's gifts; and at an early period so constant were the changes of dress, that Andrew Borde, in his first chapter of his "Boke of the Instruction of Knowledge" (1542), prefixed these lines:—

> "I am an Englishman, and naked I stande here,
> Musing in minde what rayment I shal weare:
> For nowe I wil weare this, and now I will weare that,
> And now I will weare I cannot telle what."

Ladies' costume and the decorative arts the French may have ably treated, but they are too volatile and too impatient either to practise or to extend pure architecture. However, as regards dress, they appear to possess more correct taste. "A French woman," says Goldsmith, "is a perfect architect in dress: she never, with Gothic ignorance, mixes the orders: she never tricks out a squabby Doric shape with Corinthian finery; or, to speak without metaphor, she conforms to general fashion only when it happens not to be repugnant to private beauty."

The frivolous decorations heaped upon architecture by our Continental neighbours have occasionally influenced our own adaptations. For example, in lieu of the architrave and cornice to windows, a kind of looking-glass frame is often substituted, which, to an educated eye, has a very flimsy appearance. The cornice, or label, over window openings, is useful and ornamental; not so, however, a band of twisted mouldings of uniform projection.

The continuity of horizontal lines in the fronts of street houses has been condemned as monotonous, and gables recommended as being more picturesque. The adoption of the latter would be sacrificing utility for ornament, and re-producing Mediæval London. I pity those who would have to exist in the gables. Gables are fashionable features, and excellent as terminations to Mediæval roofs of churches and chapels. The harmony of many new churches has been sadly marred by breaking up the roofs of the aisles into gablets, rendering them neither ornamental nor useful, except for side galleries, which are universally condemned. Cicero, speaking of the magnificence and expenses of building, says that there certainly ought to be some bounds fixed and prescribed for these things, and those to be according to the rules of moderation; but the measure whereby we are to judge of their being moderate is their subserviency to the ornaments and conveniences of life.

In early times each country appears to have retained its own style of architecture without much change: Egypt and Greece were not subject to the fashionable caprices of modern times. The inventive genius of the Romans was not severely taxed: the three Greek orders, ready made, were found eminently acceptable; and by forming the clumsy Tuscan, and placing the Ionic volutes on the Corinthian capital, the composite was easily fashioned; and hence the production, without much thought, of the memorable *five orders*, destined to create architecture! Rome, and to satisfy after-ages with ready-made ideas. Although Sir Christopher Wren considered that architecture aimed at eternity, and was the only thing incapable of modes and fashions; still it is well known that architecture is a progressive art, and the orders in their turn were soon exchanged for the Gothic mode of construction; and notwithstanding it has been termed by the admirers of the Classic styles, "a sort of monster engendered in the night of barbarity; a heterogeneous mixture of confused remembrances, and obliterated traditions;" it is still in vogue, although somewhat marred by a Venetian modification.

Architecture can scarcely be said to have developed itself to any extent in this country until the invasion of William I., in 1066. At this period the Norman, or Romanesque, with its semicircular arches, chevron and other mouldings, became the prevailing style until the twelfth century, when the next general change was effected by the introduction of the Pointed arch; and in the thirteenth century a style of architecture termed Gothic was matured, of a novel and interesting character: the many cathedrals and churches throughout the country that have been spared to us testify to this day its beauty. This new fashion passed through several phases, and was rendered as marked a style as the architecture of Greece and Rome; and, no doubt, many would have desired that it had progressed and become perfected, and remained to us as a national style, and as free from fashionable caprices as Classic architecture had been in early days. But the desire for novelty and new fashions soon ushered in a new mode, which,

> "Like a sick man's dreams,
> Varied all shapes, and mix'd all extremes."
> HORACE.

It assumed the name of Elizabethan architecture, and flourished during the latter half of the sixteenth century. So great was the aversion at this period to regular architecture, that columns, balusters, pedestals, &c., were executed tapering downwards; and every other distortion was cultivated for the sake of variety.

The Roman style was feebly introduced into England in the sixteenth century; and, like all new fashions, was grafted upon preceding styles; and in the seventeenth century it was fully developed by Inigo Jones and Sir C. Wren, and afterwards most successfully practised by Sir W. Chambers.

Early in the nineteenth century the architecture of

> "Fair Greece! sad relic of departed worth!
> Immortal, though no more,"—BYRON—

was imported, and soon became the fashionable style of the day; and although extensively copied and adapted, it never took root or expanded itself. The pedimental roof, however well suited to its native country, is too depressed for a northern climate; and its noble portico, admirably arranged to afford protection from the heat of the sun, is wholly unfit, in this country, at least, to afford shelter from rain. So ill-adapted is the portico to modern buildings, rendering obscure all rooms in contiguity, that it has now become the practice to remove the pediment and insert glass in its coffered ceiling. The coffers, if filled with painted glass ornaments in the centres, would have a good effect.

Among other styles imported may be named the French, Chinese, Moorish, Egyptian, Turkish, Modern Italian, Swiss, &c.; and although occasionally employed, they can hardly be said to have ever become fashionable.

The present fashionable style is a mongrel, polychromatic Italian Gothic, surmounted with an extreme northern roof; and singular enough, that although the intermixture of styles by Inigo Jones and others has been strongly deprecated, the very same corrupt manner of proceeding is still being adopted. Architects must follow the current;—

> "See the right, and approve it too;
> Condemn the wrong, and yet the wrong pursue."

Many distinguished men complain of the present fashion; but follow it they must, or others will do so for them. If the current cannot be checked, and architects must follow it, they can endeavour to guide it; but whatever is done, it is to be sincerely hoped that they will retain the noble and distinguishing parts of buildings; viz, their mouldings; and not sacrifice them for the substitutes of black, red, and coloured bricks.

No doubt, the Venetian Gothic has its beauties, which, if judiciously culled, and due regard to proportion—now much neglected—being paid, with proper and adequate mouldings in red brick, if red brick must be used, and with a moderately high pitched roof, may be reasonably introduced for secular buildings; but for eccle-

siastical architecture, let us have coloured marbles and honest stone; brick and pictorial mosaics being at all times a mean substitute for the latter materials. As has been observed, nobody will be at such an open defiance with common sense as to profess that we should not endeavour to know, and to think of, things as they are in themselves; and yet there is nothing more frequent than to do the contrary; and men are apt to excuse themselves, and think they have reason to do so, if they have but a pretence that it is for God, or a good cause; that is, in effect, for themselves, their own persuasion or party.

Nature, the one and only standard acknowledged by all to be ever perfect and beautiful, never influenced by fashion, each returning year presenting the same forms of foliage and flowers, is yet always acceptable: how far different architecture ever varying, and its disciples always eager for novelties.

The best and surest way of checking an undue fashionable influence in architecture is to properly educate the minds of the people. If this were attended to, the conflicting opinions on taste and proportion would be fewer. How is it possible for any one to decide upon the merits of a building if utterly ignorant of the ordinary rules of art and the grammar of the various styles? In a discussion on an æsthetic principle in decoration, not long since, the speaker remarked "that a correct judgment in the matter of colour consisted in having what was called *an eye for colour*; that such an eye was the gift of the good God; and if it be wanting, no amount of reading or theorizing could supply the deficiency." My opinion is, that not only the eye, but also "that, if the soul be without knowledge, it is not good;" and that the eye, through the mind, is perfectly capable of being educated, and becoming qualified to judge of the relative quantity of each line which should be present in any ornamental arrangement placed before it. The ignorance prevailing on art products at the present period is surprising. As an instance, I was recently examining a public building, when a man of considerable self-importance, who was with me, observed, "Now I call that a pretty thing." I regretted not being able to agree with him in opinion, and urged that the attic story was of an undue altitude, and overpowered the rest of the building. "Well," said he, "that is a mere matter of taste: I don't think so. I have eyes, and can see as well as you."

Professor Faraday,* speaking of deficiency of judgment, truly says "that, in physical matters, multitudes are ready to draw conclusions who have little or no power of judgment in the cases; that the same is true of other departments of knowledge; and that, generally, mankind is willing to leave the faculties which relate to judgment almost entirely uneducated, and their decision at the mercy of ignorance, prepossessions, the passions, or even accident."

The further development of true architecture would be greatly accelerated by instilling into the public mind correct *data* on matters relating to architecture and the fine arts. No freemasonic secrets are required by the profession at the present time: free knowledge of art as well as free trade is a *sine qua non* now-a-days.

The three learned professions, viz., divinity, law, and medicine, justly retain their universally-acknowledged high position; and as a guarantee to the public, all young men have to qualify themselves, and to pass strict examinations, prior to being admitted as regular practitioners.

It has been asked, what is an architect? and the question gave offence; but upon reflection it was not an unreasonable inquiry; especially when it is known that the builder of Osborne was termed an architect,—the sketcher of the 1851 Exhibition was termed an architect, and the engineer of the 1862 Exhibition was called an architect,—and that the *employés* of the late Commissioners of Sewers now acting as surveyors to vestries are often engaged in building schools, repairing churches, &c., and consequently call themselves architects. The inquiry, therefore,—what is an architect? was not altogether out of place.

It is somewhat remarkable that although the utility (and position) of an architect has been publicly doubted; still some members of the Institute of Architects have actually questioned the necessity of an examination; and consequently a *voluntary* architectural one has been instituted. From a cursory glance at the proposed examination papers, I cannot see anything beyond that which is required at an ordinary public school. In the list of books recommended to candidates, the celebrated works of Pugin, Bowman and Crowther, Britton, and others are not named, although Stuart and Revett's works, and Taylor and Cresy's, have not been forgotten.* Proportion, taste, decoration, and other important fine art matters, are not even alluded to; but gardening is not overlooked. These omissions, however, can be easily rectified.

Great credit is eminently due to the promoters of the architectural examination, and no doubt it will be justly valued, and tend to invest the subject with high interest, and raise its dignity as a science. Architecture must be considered by the Institute as a whole;—all unseemly contests for a president favouring either Classic or Gothic, as much as possible avoided; and, to insure this desideratum, perhaps in future it would be better to select an educated nobleman, without bias, as president, rather than a professional man. All divisions tend to weaken, and it would be a public regret and a great evil if any party influence be permitted to prevail, to disturb the growing importance of so valuable and necessary a body as the Institute of Architects. By educating the profession and the public, architecture will become, as of old, less affected by fashionable caprices.

It is neither to be expected, nor necessary, that the public should acquire a practical knowledge of building,—that is the architect's province: for the strength and durability of materials, the public consider the architect responsible, and it is the duty of an architect when he uses perishable materials, such as red bricks and Bath stone, to acquaint his employer of their decaying nature; so that in the event of failure, he will not be answerable.

Cement is often denounced as a sham, but it is a singular circumstance that in London it has been, in innumerable instances, sought to repair and render decent works in which Bath stone has been used.

A good general knowledge of architecture and of the fine arts is most important for the public: it would prevent that disappointment which frequently occurs through a previous non-acquaintance with the appearance of a building until it is erected. The public should be enabled to understand a building and its parts, independently of those alluring and deceitful highly coloured and picturesque foregrounds and backgrounds, which only exist in the mind of the artist hired to depict them.

Fashion in architecture appears to have been entirely overlooked by the enthusiastic writer of the introductions to the Fine Art Department, in the official catalogue of the International Exhibition. Instead of portraying historically the various phases of architectonic art, he pronounces in favour of Gothic as a *panacea* for all requirements. "Gothic," he observes, "is simply the one style which, by the circumstances of its development, has united in itself all the best constructive and the best ornamental forms of the world's inventions in architecture." "It is no fine figure to say, that by ten thousand proofs Gothic has stamped itself on the fair face of Europe as the architecture of Heaven, and the architecture of home. Man's requirements in the province of building do not substantially vary: they are amongst the things that have been, and will be again."

Prior to a new style of architecture being matured, there will be, in my opinion, a revival of the Classic styles. It will be recollected that when Stuart and Revett introduced the Grecian style, it was deemed an act of barbarism to do otherwise than to strictly copy; and it was not considered lawful to introduce even a semi-circular arch in a Grecian building. More freedom of thought is now permitted; and it is probable that the Classic style will be revived. It is now dawning,—and without that strict adherence to precedent as formerly. Wren, in his City churches, handled the Roman style with freedom; but it must be borne in mind, that he was limited to the ritualism of his time. For a font he generally took a baluster, and formed a basin in the top,—but now fonts, sediliæ, piscinæ, &c., can be designed on Mediæval principles, in the Classic style,—and also properly proportioned chancels, which were not encouraged in Wren's time. I am still of opinion that a higher development of the Mediæval architecture of the fourteenth century is the best suited for ecclesiastical edifices; yet I must admit that the Classical style is capable of further expansion without that strict adherence to ancient models. If architects were now invited to prepare designs in the Grecian style for St. Pancras Church, they would not require such a composition as the present building, viz.,—the Temple of Erectheus, with the Tower of the Winds stuck on the top. As an example of Greek art, no doubt, the edifice is valuable, but no credit is due for originality of design: the power of thought has not been invoked.

"It may be asked," says Mr. Fergusson,* "if I propose to throw over all precedent, and to abandon at once all Grecian pillars and Gothic pinnacles, and all the classical and Mediæval details which now make up the stock-in-trade of an architect, what would I propose to substitute in their place? The answer," he says, "is a simple, though scarcely a satisfactory one, as it is merely—I do not know."

I consider that it is possible to produce a new style of architecture, based upon correct principles and good taste, without aid from either Classical or Mediæval examples; and this can be more easily accomplished by practical demonstration than by lengthy verbal descriptions. Whether the new style, when created, will be worthy of acceptance is another question. At the present time eccentricity is more sought after than originality.

It is to be hoped that the present Venetian-Gothic architecture, with its stunted and twisted columns and other deformities, will not remain in vogue. Parliament wisely rejected it; and as the public become better acquainted with the best productions of art, it will eventually be supplanted by a purer style. The folly of dogmatising in favour of any particular style must be evident when we consider how much architecture is influenced by fashion. It is far better to have a general knowledge of all the various styles and to endeavour to follow nature, and apply her unerring principles to art purposes, than to idolise any one style in preference to another, which in the course of a few years is no longer countenanced, beautiful as it may seem to be; but doomed, at least for a period, to enable some new phase of art (however ridiculous) to exert its influence. The works of nature, on the contrary, as Scripture instructs us, were "done in judgment from the beginning: from the time they were made the parts thereof were disposed, and garnished for ever."

MEETING OF THE ARCHITECTS OF IRELAND.

DUBLIN WINTER GARDEN COMPETITION.

On Saturday, the 3rd, a special general meeting of the architects of Ireland was held at the Ancient Concert-rooms, for the purpose of protesting against the unjust course adopted by the committee of the above project towards the members of the profession who competed for the intended building; as also to adopt measures either for the re-organization of the Institute of Architects in Ireland, or the formation of some other Association for the better protection of professional interests in future. Mr. Jacob Owen presided. Amongst those present were Messrs. J. H. Owen, W. G. Murray, J. J. M'Carthy, George Ashlin, E. H. Carson, J. M'Curdy, J. R. Carroll, C. Geoghegan, N. Montgomery, J. S. Butler, C. Papworth, J. Bourke, D. C. Ferguson, W. Welland, J. Bell, jun.; J. Maguire, J. C. Burne, J. J. Lyons, W. R. Farrell, C. D. Astley, T. Owen, J. C. Campbell, Franklin, R. Turner, T. Turner, W. J. Barre, Lee, &c.

Letters of apology for unavoidable absence, but cordially concurring in the objects of the meeting, were read by the honorary secretaries from Sir Thomas Deane, Messrs. J. Lanyon, W. Fogerty, Boyd & Batt, &c. &c.

Mr. W. Murray moved the first resolution:—

"That this meeting, having been convened for the purpose of taking into consideration the necessity that exists for some co-operation amongst the architects of Ireland, in order to protect themselves against the injuries inflicted on their profession by the present system of competition, has to express its regret that the recent extraordinary course adopted by the directors of the Dublin Exhibition Palace and Winter Garden Commissioners, whose ostensible object would appear to be the promotion of science and fostering of art, should furnish, as it does, the most striking proof of the urgent demand that presses upon us, individually and collectively, to devise some tangible remedy for the future against inroads so fraught with injury and injustice to our profession."

The present meeting was convened, he said, in consequence of the great abuses which had crept into the system of professional competition existing in public bodies, and more particularly with regard to competition for the building of the New Winter Palace. The commissioners interested in that project had laid down a series of rules and regulations with regard to the fur-

* "Observations on Mental Education."

* Pliny and Strabo are to be studied, but not Herodotus and Diodorus Siculus.

* "Historical Inquiry into the True Principles of Beauty in Art," &c. 1848.

nishing of plans and specifications, which in no one instance were strictly conformed to. There was a general impression amongst the profession that the competition was not carried out in such a manner as the public might expect. In almost every instance the prescribed regulations with regard to the plans and specifications were broken through. For instance, it was said the designs were to be in Indian ink, whereas they were almost all coloured. 35,000*l.* was the sum estimated for the work, and that was broken through on the assumption it was almost impossible to get the building executed for that. It was necessary the profession should adopt some rule with regard to committees who, not thoroughly understanding what they required, met together as judges of competitive plans.

The resolution was seconded by Mr. J. M'Curdy, and carried.

Mr. R. Carrol proposed the next resolution :—

"That this meeting views with extreme regret the course adopted by the directors of the Dublin Exhibition Palace and Winter Garden Company, in withholding, in the recent competition, the two premiums offered by the printed conditions, under the plea of nonconformity of the designs to the said conditions; whilst at the same time the directors utterly ignored their own rules by selecting (without awarding either of the premiums) a design from amongst those submitted which conformed as little as any with the specified conditions; as such a course adopted by the directors of a public company is calculated to break all faith and confidence between the architectural profession and public committees."

As one of the profession, he wished to state that their case against the commissioners was this. It was not to be supposed that twenty-five gentlemen competed, at an expenditure of 150*l.* and 200*l.*, for the mere premiums of 75*l.* and 150*l.* which had been offered. They competed for success. They had not, however, a fair competition. The directors threw all the original designs aside, and received designs on different conditions, increasing the cost by 5,000*l.*, and reducing the amount of accommodation required. The design which was to be carried out, and which Mr. Jones was at present preparing a specification for, would cost 40,000*l.*,—5,000*l.* over the stipulated sum. The accommodation given by the accepted plan was not at all equal to that of some of the designs which the authors were prepared to carry out for 35,000*l.* The new designs had been selected without any competition; and in the preparation of them the directors had the advantage of studying all the other designs for weeks. It was understood that to save outlay the directors adopted this course; but why should twenty-five men sacrifice from 2,000*l.* to 3,000*l.* in preparing their drawings, in addition to an equal sum to compensate them for loss of time? He had spent 80*l.* in the preparation of his design, and another competitor nearly 200*l.* It was not a fair course to adopt towards the competitors. He considered there should be a new competition on the altered conditions.

The motion was seconded by Mr. Jas. Owen, and carried.

It was proposed by Mr. C. Geoghegan, seconded by Mr. E. H. Carson, and resolved—

"That this meeting is of opinion that the directors of the Dublin Exhibition Palace and Winter Garden Company had, in justice, *no power* by their conditions to select any design from amongst those submitted in competition without awarding the premium to such design, and that by so doing they have broken faith with the members of the architectural profession, who competed under the firm conviction that they had a sufficient guarantee in the names appearing in this directory that no *unfair advantage* would be taken of the *unsatisfactory* and *unsafe* terms offered to the competitors—namely, that 'the directors reserved to themselves the right of rejecting all the plans without awarding the premium,' of which this meeting could hardly think it possible they would have availed themselves; and now desires to express its great surprise that the liberal response of the profession generally, by which plans to the value of 2,500*l.* were placed before them, was not deemed worthy of some more unexceptionable termination than the extraordinary compromise entered into by the above body with one of the competators, the mere anticipation of which result would have prevented *any honourable* man from entering the lists of the competition."

Afterwards, amongst other business, it was proposed by Mr. J. H. Owen, and seconded by Mr. J. J. Lyons, and resolved—

"That for the future protection of the profession at large, the architects do herewith undertake the re-organization and revival of the "Irish Institute of Architects," or the formation of some similar body; and that a committee be now formed to consider as to how this object can best be effected, and report to a meeting of the profession, at which the rules, bye-laws, &c., shall be discussed, and adopted if approved; and that such committee shall consist of the following gentlemen, viz.: — Messrs. J. M'Curdy, N. Montgomery, W. Murray, J. H. Owen, T. N. Deane, J. R. Carroll, E. H. Carson, W. J. Welland, and J. J. Lyons, who shall have power to appoint a secretary and convene a further meeting at such time as shall seem to be desirable."

Thanks were voted to Mr. Jacob Owen for presiding, and the meeting separated.

Messrs. John M'Curdy, E. H. Carson, and J. R. Carroll, acted as honorary secretaries to the meeting.

If the competition in question should have the effect of bringing the architects of Ireland together as a body, it will have effected much good.

THE SANITARY CONDITION OF LANCASHIRE.

DR. BUCHANAN, physician to the London Fever Hospital, and one of the London medical officers of health, has been engaged, since the middle of October, in an official inquiry (following our lead) into the sanitary condition of the principal manufacturing towns under their present exceptional circumstances. His report, unhappily, leaves no doubt that "one of the most lamentable consequences of extreme destitution has made its appearance." Typhus fever has broken out among the population of Lancashire for the first time since 1847. Again it has appeared in the track of want; and, it might have been said, of want especially when combined with a bad sanitary condition.

In Preston there were 227 cases between Midsummer and the end of November; and those attacked died at the rate of 23 per cent. In Manchester there have been 100 cases of the disease in the same period, with nearly the same high rate of mortality among its victims.

Of this phase of the cotton famine we fear we see only the beginning. In the presence of this enemy there must be no relaxation of the work of relief, and an increased attention to the no less requisite work of purification of suspected and infected localities. The great peril is the appearance of a disease that may become epidemic. The "famine fever," if it become epidemic, does not limit its ravages to the localities and population amid which it first appears. In 1846-7 the Irish famine produced our last great typhus epidemic. In those years there were 300,000 cases of the fever in England. In Liverpool alone the number of deaths from this disease was 10,000. It is thus the interest as well as the duty of all classes to help in every way to avert so universal a calamity. The report points decidedly to the necessity of an increase of the allowance per head to support the destitute to the end of the conflict. It is to be hoped, too, that those sanitary measures which we have on former occasions, as now, pointed out to be urgent, will not be neglected.

ART EXHIBITION FOR THE RELIEF OF THE DISTRESS IN THE COTTON DISTRICTS.

Two of the rooms belonging to the Society of British Artists, Suffolk-street, are filled with 782 paintings and drawings, contributed at the instigation of a very influential committee in aid of the Lancashire operatives. Prices are affixed. The majority of the contributors are amateurs, including many known at former exhibitions,—Lady Belcher, Countess Grey, the Ladies Cadogan, Mr. Ruskin, Miss Blake, Mrs. Higford Burr, Mr. Gambier Parry, Lady Eastlake, Mrs. Roberton Blaine, Mrs. Spencer Lewin, and others; but Messrs. Desanges, Cope, R.A., E. W. Cooke, R.A., Mulready, R.A., C. L. Stanfield, R.A., David Roberts, R.A., Millais, A.R.A., Miss Mutrie, G. Lance, and other artists, have assisted with valuable contributions.

Some of the works by less known names require to be looked at with "charity;" but the collection, as a whole, is interesting and gratifying.

THE PHOTOGRAPHIC SOCIETY'S EXHIBITION.

As an art becomes more and more perfected its advances are necessarily slower and less observable. It is not strange, therefore, that in the present exhibition of photographs and daguerreotypes we find few things that might not have been seen last year. Amongst the exceptions we should place the "Instantaneous Views at Naples and elsewhere," by Col. Stuart Wortley (392 and 422); "Photographic Studies," by Vicountess Hawarden (160 and 168), remarkable for delicate gradation and beauty; and some of the large-sized portraits by Mr. Claudet. Col. Wortley, in his views includes in-rolling waves of the sea, the representation of which, sharp and distinct, must indeed have been obtained "instantaneously." Mr. Thurston Thompson sends a number of noticeable photographs after Turner, from paintings as well as from the "Liber Studiorum." Mr. H. P. Robinson has a large picture, "Bringing Home the May" (166); Mr. Vernon Heath, amongst many other things, a remarkable "Study of Ferns" (143); and Mr. J. Bedford, as usual, some charming architectural subjects, both from England and abroad. The London Stereoscopic Society send a large number of works from the International Exhibition, of which there must have been an enormous sale.* One of the smaller rooms contains some very fine works by foreign photographers, not yet catalogued. The large view of sculptured doorway, *gravé sur acier*, by C. Nègre, seems an advance on what has hitherto been done in that direction. The exhibitors are ninety-seven in number.

WINDSOR CASTLE.

REPORT ON THE SEWERAGE, WATER-SUPPLY, VENTILATION, AND SANITARY WORKS.

THE Report on the sanitary condition of Windsor Castle made by Mr. Robert Rawlinson to the Right Hon. W. Cowper, First Commissioner of Her Majesty's Buildings, having never been made public, and containing matter suggestively useful for other places, we are glad to have the opportunity of placing it on record.

Sir,—On the 27th of January, 1862, I received instructions to "examine and report upon the present condition of the drainage of Windsor Castle."

I immediately put myself in communication with Mr. John Turnbull, Clerk of Works at Windsor Castle, and William Starie, Esq., of the Office of Works. In company with these gentlemen I have examined plans of the sewerage, of the basement, of the several floors, and also of the sewers and of the buildings external the outer walls of the Castle. A personal inspection has been made by us, in detail, of the interior of the Castle from the basement to the roofs, visiting every floor and almost every staircase, corridor, and closet within the Castle. We inspected the royal mews and the tenement residences connected with the stables; as also the waterworks.

Plans of the sewers, drains, and of the several floors have been examined during the inspection.

Mr. Turnbull, at my request, has furnished the statistical information as to sewers, drains, water-closets, flushing-tanks, water-works, fire-prevention apparatus, warming apparatus, ventilation apparatus, and the general arrangements for effectively keeping these works in order.

That I may be enabled to give a more comprehensive idea of the sanitary works undertaken and executed, and the natural and artificial difficulties encountered and overcome, it is necessary, briefly, to describe the site on which the Castle stands; and, also, to notice the progressive growth of the Castle from a rude fortress up to its present magnitude.

The site on which the main buildings of the Castle stand is about 100 feet above the river Thames adjoining. The subsoil is chalk.†

The direction of the "slopes" most probably indicates a line of "fault." The steep face or "crag" is to the north and east; the "tail" to the south and west. The valley of the Thames, at Windsor, consists of alluvium, a mixture of gravel, sand, silt, and marl, in various proportions. At or near Frogmore (Frog Mere) the bed of chalk on which the Castle stands passes beneath "alluvium."

Chalk forms, comparatively, a dry and healthy subsoil, situate as at Windsor. The elevation of the main platform on which the Castle stands is also an advantage, offering free play for external ventilation, and a good fall for subsoil and surface drainage.

Edward the Confessor, "for the hope of eternal reward and the remission of all his sins, his father's, mother's, and all his ancestors," granted Wyndleshore (then so called from the winding course of the river Thames), now called Windsor, to the monks at Westminster. William the Conqueror exchanged lands, &c., in Essex for it, and built a house on the hill, which Henry I. converted into a castle, wherein Edward III. was born. About the year 1374, William of Wickham was engaged during a space of fourteen years rebuilding and enlarging Windsor Castle; and from this period to the present date alterations and additions have, from time to time, been executed. Sir Jeffrey Wyatville commenced the most exten-

* The London Stereoscopic Society have published a striking album portrait of Dr. Colenso, whose book is disturbing men's minds just now.

† Chalk absorbs water readily, and is consequently never absolutely "dry:" it is, however, considered a dry subsoil when elevated, as at Windsor Castle.

sive alterations ever made in Windsor Castle, August 12, 1824. Alterations and additions were continued to the end of the reign of William IV., and yet the sewerage and drainage of the Castle palace remained defective. Cesspools, full of putrid refuse, and drains of the worst description existed beneath the basements. The means of warming and ventilation were also of the worst possible character. In the royal apartments small casements in the lower parts of the windows could alone be opened.

Soon after the year 1840, Sir James Clark, on learning from Sir Jeffrey Wyatville the very imperfect state of the drainage of Windsor Castle, reported it to the First Commissioner of Woods and Forests, then Lord Lincoln, and requested that the whole subject of the drainage should be thoroughly investigated. Lord Lincoln saw at once the importance of the matter; and after consulting with His Royal Highness the late Prince Consort, caused examination to be made into the sanitary condition of the Castle. The late Sir Henry De la Bèche, at the request of Lord Lincoln, reported fully on the sanitary state of Windsor town and Windsor Castle. In consequence of this report, Capt. Vetch, of the Royal Engineers, was commanded to cause plans to be made, and to devise and lay out a system of main sewerage and drainage. Under the immediate superintendence of Mr. Turnbull, the great sanitary works at the Castle, of sewerage, drainage, water-supply, warming, ventilating, &c., have been carried out up to this date.

Windsor Castle has been fortunate in its sanitary works and arrangements. Capt. Vetch had probably studied the subject of sewerage and drainage more fully than any other person at the date when he reported. The late Prince Consort, with that enlarged and far-seeing vision of intellect which so peculiarly characterized him, readily mastered the question, and encouraged the efforts of those engaged in the work. Mr. James Simpson, civil engineer, revised the water-supply, and brought his long experience and practical knowledge to bear; giving Windsor Castle and its offices a supply of water, for fire and for sanitary purposes, abundant and complete. Mr. John Turnbull, acting under the superior officers of the Board of Works, but also in constant communication with his late Royal Highness the Prince Consort, has, with untiring labour, worked at the progressive changes which have been undertaken to make Windsor Castle as wholesome and as comfortable for domestic uses as it is extensive and regal for State purposes. Sir James Clark has also persistently attended to all necessary sanitary arrangements; so that this class of works in Windsor Castle has received full attention.

Area.

The main buildings of Windsor Castle, including the courtyards, now cover an area of about twelve statute acres, the basement floors of the upper ward having an area of about 9,500 square yards, or some two statute acres.

	A.	R.	P.
Area of Windsor Castle on plan	12	2	3
Terraces not on plan	1	2	29
East terrace garden.....	3	2	12
Royal mews	2	1	0

The plan of Windsor Castle is in some respects complex, and such as would not be advisable in new buildings. There is, in parts, too much crowding for the most perfect sanitary arrangements, and also too much isolation for the greatest facility of service and convenience. These defects are due, no doubt, to conditions under which the Castle has grown from a comparatively small place of defence, in a barbarous age, by repeated additions, to the largest Royal residence in Great Britain. Some of the walls now in existence were originally built for purposes of defence, and are consequently of great thickness. They are of chalk-ashlar and rubble wall-stone, set in weak mortar, rendering it difficult, in some instances, to make the spaces and rooms within them available for modern uses. This has, however, been done in a very successful manner. Walls have been underpinned and carried to lower foundations. Flues have been formed, and windows and doors have been cut through, sufficient to give security, ventilation, light, and means of communication.

In the earliest days of Windsor Castle sanitary appliances were of the rudest form. Within the walls there were floors of mud, covered with rushes and litter; and externally, heaps of ordure and refuse, but no sewers nor cesspools.

When chamber-floors were first added to Windsor Castle, square "stacks," or vertical openings like large flues, were formed in the external walls to serve as privies.* The position of some of these places can now be seen in the old walls, but their use, for their original purpose, has gradually been abolished, and they have been adapted to more modern requirements. It is not necessary, for the purposes of this inquiry, to fix a date to the first formation of sewers and cesspools. Sewers of a rude construction, square on section, with rubble side-walls, and uneven in line and gradient, were first formed from internal rooms to the external walls; and, for the most part, ending immediately outside the buildings. The accumulation of solid and fluid refuse at the base of the Garderobe Tower and at the outer ends of the sewers in time became obnoxious to sight; and then, first open cesspits, and subsequently covered cesspools, were invented to store and cover over the foul solids, the sewers only removing occasional overflowings of these most dangerous receptacles of filth; sewers and cesspools, and their putrid contents, acting with far more deadly energy on the health of those so unfortunate as to breathe the gases liberated within the buildings than the exposed heaps of refuse of former and ruder periods, when the dung-heaps were washed by the rain, dried by the sun, and the gases were diluted and dispersed by every wind.†

General Sanitary Rules.

There are some general rules necessary to be observed in devising entirely new sewerage works, which cannot now be made applicable to Windsor Castle. I name this because an approval of work done might otherwise be taken to imply that it would be proper to follow, in other cases, that which exists at Windsor Castle, whereas nothing better could, under existing circumstances, be accomplished.

As a rule, sewers should not enter any inhabited building, and all drains should commence at the outside walls, and not traverse the floors of the basement.

All water-closets should be in connexion with an external wall, and have a fixed amount of external light and means for unceasing ventilation.

All rooms, to be inhabited, should have external sunlight.

All sewers and drains should have full and free external ventilation, and gases escaping being made to pass through wood charcoal filters.

Cesspools should not be in existence within or near any dwelling. Manure-tanks can only be allowed for agricultural uses, and these should never have any direct communication with sewers or with house drains.

An elevated site (like Windsor Castle) offers a good fall for water and for fluid refuse, but also offers facilities for the rapid upward flow of sewage gases. It is therefore advisable to break the gradient of any steep sewer or drain at intervals, and cut off by a flap-valve and full ventilation all chance of gases rising from the lower levels to the buildings and rooms at the highest points.

If sewers and drains traverse the basement of any building, such sewers and drains should be absolutely air-tight within the external walls, and no untrapped internal communication should be allowed with any sewer or drain.

The sub-soil beneath any inhabited building should be dry and sweet, because at all times, when the internal temperature of the air is greater than the external temperature, or than the temperature of the subsoil and the sewers, the rooms exert a sort of pumping power; so that a foul sub-soil, in which are foul cesspools, sewers, and drains, may give off gases sufficient to contaminate the entire body of air within any building, if such influence is not made impossible and if a full admission of pure air is not provided for.

A natural watercourse should not be inclosed and converted into a sewer, because the volume and flow of water down a brook or rivulet is very irregular, varying as much as 1 to 300; that is, the dry-weather flow of a stream being represented by 1, the wet-weather flow or "flood" may be represented by 300. Any such culvert must, therefore, be vastly in excess of the requirements for removal of sewage, which is almost a fixed volume; the range of variation being very much less than in a natural watercourse. A small brook may serve to drain the surface and subsoil of several hundred acres of land; a sewer, to remove the entire sewage, surface, and subsoil water of Windsor Castle, only drains, comparatively, a few acres of land. This distinction is of the utmost importance, but was not considered when the large sewer leading to the Thames was made.*

New Sanitary Works.

Previous to the commencement of the works of sewerage and drainage in 1846, the old drains and cesspools were opened out, examined, and their direction, dimensions, and positions laid down on plans. These plans are now in the Clerk of Works' office.

The old rubble-stone and brick drains have been taken up, as also all tainted refuse and adjoining subsoil, and removed.

All cesspools were opened out, and their foul contents carefully disinfected and emptied. The greater portion of such cesspools have, as in the case of old drains, been removed; and where it was not found practicable to take out the bricks and surrounding earth, such cesspools were emptied, cleansed, disinfected by hot limewash, and filled in with lime concrete.

During the last sixteen years about 6,000 square yards of basement and ground-story floors, out of a total area of about 9,500 square yards, have been taken up for the execution of alterations and repairs, to an extent that gives good reason to believe that not one old cesspool nor old drain remains in Windsor Castle where these works have been executed.

Twenty-three cesspools were removed from the upper ward, and twenty-eight from the middle and lower wards, making 51 in all. These cesspools varied in dimensions from 12 feet by 8 feet and 9 feet deep, to 3 feet diameter and 6 feet deep.

The new sewers are of brickwork, for the most part in cement. The work is true, sound, and perfect.

The new drains are formed with vitreous glazed earthenware pipes, only such as were true in form and perfectly sound having been used. The pipes have socket-joints: they are truly laid, and the joints made good with cement. The drain-pipes within the Castle are laid upon a bed of concrete, composed of chalk and "bone-lias lime," and are surrounded and covered to a depth of not less than 6 inches with similar material.

The main drain for Windsor Castle is at a depth of about 30 feet (30 to 35 feet) below the level of the ground-floors, and extends from the North Terrace to the "main sewer," near "the Long Walk," and a branch of the main drain extends from the court-yard near the Norman Gate to the East Terrace Garden.

The greatest fall in any drain is 1 in 30; the least gradient, that on the large main, 1 in 460. The gradient of the drain beneath the Castle is 1 in 40. These are good and safe-working gradients.

The work of improvement has been progressive, and is now going on. Money has been voted for some of the works recommended in this report; such, for instance, as the improved outlet to the river from the main sewer. Water-closets and drains are being ventilated, and the several fixed windows remaining in the Castle will be made to open.

Any wells opened up and found to be foul, have been cleansed by removal of the tainted substance, and renewals made with fresh materials.

Foul subsoil has also, in all cases, been removed, and fresh gravel or concrete substituted.

In the numerous structural alterations made in Windsor Castle, the old, large, and open chimney-spaces of Mediæval periods have been made good. All new chimney-flues are lined with fire-clay tubes, flushed and grouted in solid.

To prevent smoky chimneys, about seventy of the most troublesome rooms have been ventilated and otherwise improved.

The Quadrangle, or Great Courtyard, was lowered some 3 or 4 feet by the late Sir J. Wyattville. The area is about 2½ acres. This court has been re-formed, drained, gravelled, and paved, so as to preserve an even, clean, and dry surface.

The Cloisters are the property of the dean and

---

* The old name for the rude conveniences found in palaces, castles, and mansions, in England formerly, and on the Continent to this day, is "garderobe." The towers in which such conveniences were placed, tier above tier, with a shaft common to the whole, as at King John's Tower and others in Windsor Castle, and as at Langley Castle, are designated "garderobe towers."

Matthew Paris used the terms "Domicilium necessariorum." The French term "garderobe" is used in old books; as also "privy chamber:" the modern terms are "water-closet" or "closet."

† The dangerous arrangement of sewers, drains, cesspools, and water-closets beneath and in the Castle did not escape the notice of the architect. He is said to have remarked, "I hope it is all right; but there will be a terrible stink some day." The abolition of cesspools and construction of proper sewers and drains did not, at the time, engage the professional attention of architects.

* An independent sewer outlet of comparatively small sectional area may be constructed, with storm-water overflows. This sewer may preserve the sewage from extreme dilution, and carry it to the land for agricultural uses, should such mode of sewage-application be at any time adopted.

canons of Windsor. I did not make any inspection of these, but I was informed that the cloisters had been drained by the late surveyor.

The Military Knights' residences, being private houses, I did not enter to examine them, neither did I inspect the private residences in the Keep, or Round Tower. But I learned that the drainage had been improved.

In these private residences, where the rooms are small, ventilation must, in a great measure, continue to be regulated by the residents themselves.* Perfect sewers and drains, with regular flushing, only constitute parts of a sanitary system necessary to health. Close apartments and rooms, however well sewered and drained, may allow of the ripening of contagious fevers, such as scarlatina, if the air is poisoned by over-crowding, and remains stagnant.

DETAILS OF SEWERS AND DRAINS.

Sewerage and Drainage of Upper Ward, Royal Apartments.

	Length in Yards.
Brick sewer, 4 feet 6 inches by 3 feet; 9-inch work; executed in 1846	421
Glazed earthenware pipe drains:—	
9 inches diameter	1,211
6 do. do.	1,629
4 do. do.	1,056

Executed in 1847-8 and 50.

On this system of drains there are seven man-holes outside the Castle walls for purposes of inspection, ventilation, and cleansing. There are also seventy down-spouts (stack pipes) and soil-pipes acting as ventilators. There is one ventilating grate at end of main drain on the slopes. The sewers can be entered at three points within the Castle. These entrances are most carefully closed and protected. Two ventilating flues, each 14 inches by 9 inches, lined with earthenware, have recently been carried in the Castle wall from the main sewer to the top of the battlements of the Prince of Wales's Tower. These flues were recommended to be put in during my inspection, and are acting perfectly.

Sewerage and Drainage of Middle and Lower Wards (exclusive of the Cloisters).

	Length in Yards.
Glazed earthenware pipe drains:—	
12-inch diameter	94
9 do. do.	584
6 do. do.	748
4 do. do.	312
Brick sewer	120

Executed in the year 1850.

The sewerage and drainage of the Royal Mews were commenced in the year 1850, and completed in 1860.

	Length in Yards.
Brick sewers, old, but adopted:—	
18 inches diameter	229
12 do. do.	382
9 do. do.	282
Glazed earthenware pipe drains:—	
18 inches diameter	483
12 do. do.	173
9 do. do.	314
6 do. do.	928
4 do. do.	342

Sewerage in Home Park, commenced in the year 1845.

Main sewer, 7 feet 6 inches by 5 feet 4 inches	1,617
,, 3 feet 2 inches by 2 feet 2 inches	268
,, 3 feet diameter	342
,, 2 feet 2 inches diameter	313

On the main sewers there are eighty ventilating gratings, and one flap, over sewer end, to prevent any flow of sewage gases up to the Castle.

WINDSOR CASTLE CLOSETS, &c.

The Royal Residence, Upper Ward.

Water-closets in Upper Ward 85

Forty-two of these closets have 2-inch flushing valves and pipes from cisterns to traps: thirty-one have the soil-pipes ventilated: nineteen additional are ventilated by the rain-water down-spouts ("stack pipes"); and twenty-six have Watson's patent double-action syphon ventilators. There are also forty-one additional of these syphon ventilators to the corridors, staircases, and passages. There are ten external water-closets for servants, and four urinals.

The floors of the external water-closets and urinals are laid with glazed earthenware tiles, and the walls are covered with similar tiles to a height of 5 feet. These places are washed with a fire-hose and mops every morning. M'Dougall's disinfecting powder is used as required.

Middle Ward.

Water-closets..... 29

Eighteen of these closets have 2-inch flushing valves and pipes from cisterns to traps: ten have the lead soil-pipes ventilated: five are ventilated by rain-water pipes (stack pipes); and eight are exterior servants' water-closets.

There are five urinals, all external, arranged and managed as previously described.

Lower Ward (exclusive of the Cloisters).

Water-closets..... 25

These have syphon traps: two are ventilated by rain-water pipes, and one has a Watson's ventilator.

The means of flushing the syphon traps of the water-closets is new, having been invented and applied by Mr. Turnbull; and, so far as I know, is peculiar to Windsor Castle. The abundant supply of water enables this form of application to be made. The effect is most beneficial.

In arranging, constructing, and fixing the water-closets, great care has been taken to test all the "stack pipes" by hydraulic pressure. The leaden pipe has been placed vertical, and then filled with water, so as most effectually to prove the soundness of the pipe and its joints before use.

Old and defective forms of water-closets have been removed, and the best and most perfect forms substituted.*

* Means of ventilation may, with advantage, be applied to the stairs and passages of these houses and rooms.

THE TOWN SEWAGE QUESTION.

VERY slowly the important question how to make the sewage of towns useful to the land is assuming a practical shape. The Parliamentary Committee of Inquiry have just made their second report. The Committee, after regretting that the extent of the experiments which have been made is very limited, think, notwithstanding, that the information now obtained will enable the authorities in each town to deal with the sewage in the manner most suitable to the circumstances and the place (we are afraid not); but the Committee desire to add, that the municipal authorities have not at present sufficient powers to enable them to rent or otherwise deal with the lands in their neighbourhood for the most profitable application of the sewage in relief of local taxation.

The evidence asserts that sewage contains the elements of every crop which is grown; and that, as compared with solid manure, there are advantages in the application of sewage to the land. In the application of solid manure loss is sustained by evaporation; but no such loss occurs with sewage. In the application of solid manure to the land, years may pass before its entire productive qualities are all absorbed, causing a loss to the farmer by the slow return of the capital invested in manure; but in the application of sewage, or any liquid manure, no such loss occurs, as every particle of it comes into immediate action on the crop in a day or two.

From Lord Essex's evidence it appears that we cannot fairly test the agricultural value of town sewage by the quantity of solid manure which is found in each ton of this material, for Lord Essex says that the use of sewage manure permanently improves land, its good effects being visible afterwards for years; and the evidence further proves that the sewage has been applied to common grass, Italian rye grass, and the roots and grain crops, with great advantage; and further, that sewage grass has a great effect in increasing the quantity and quality of the milk of cows, as well as improving the condition of the cattle. It is further proved that the use of sewage hastens vegetation.

Next to sanitary considerations, the commercial value of sewage is the most important consideration. It must yield a certain amount in proportion to the outlay, in the same way as other manure; and the agriculturist must have actual worth for his money.

As regards this part of the question, Lord Essex remarks that he applied 134 tons of sewage to each two acres of wheat (67 tons to an acre), and on each acre he obtained an increase of produce worth 3*l.* 1*s.* 6*d.* On 35 acres of his meadow grass his lordship applied 600 tons per acre per annum in two dressings, and states that he got an extraordinary crop, such as he never saw before using the sewage.

Mr. Miles says that the sewage of his establishment of thirty persons was passed principally for sanitary purposes over 14 acres of land, arable and pasture. This gentleman and his bailiff, Mr. Foster, say that the value of the 14 acres of land was doubled simply by the application of this manure. This success in Mr. Miles's case is attributed to care which was taken to feed the crops with such moderate supplies of the liquid manure as could be properly absorbed, and no portion was allowed to flow in waste over the surface. To the want of attention in this respect Mr. Miles attributes the want of success at Rugby; and it appears that this is shown to be the case by the result of experiments at the school at Anerley.

The Committee are of opinion that the evidence which has been given fully establishes the fact that sewage is applicable to all crops; and that, if commercial results are sought for, it should be applied in small dressings. If the sewage of our towns and cities were utilized to the best advantage over suitable areas, it is evident that little or no imported or manufactured manures would be used. This would greatly limit the area now supplied by such manures.

Next comes a most important point of the question. Would the application of town sewage to land be likely to cause a nuisance, or be attended with dangerous consequences? On this the Committee report, as the result of the evidence, that sewage in the state in which it is found at the outfall of the sewers, even in the very hottest weather, is very slightly offensive. If applied to the land in this state and in such dressings as can be easily absorbed by the earth, no fear of nuisance need be felt, as the soil possesses the power to deodorise and separate from liquids all the manure which they contain, provided that too large a quantity be not applied; but if the absorbent power of the soil be overtaxed, and very large dressings be applied, a nuisance will be created in the neighbourhood, and injury to wells and running streams would occur. As regards the question whether solid manure can be profitably manufactured from town sewage, the committee are clearly of opinion this cannot be done.

* To be continued.

THE LONDON FIRES OF 1862.

CAPTAIN SHAW, superintendent of the London Fire Brigade Establishment, has just made his annual report to the committee of the Associated Insurance Offices, on the number and causes of fires occurring in the metropolis during the past year.

The document is full of interesting statistics, and ought to aid considerably in bringing about, what we have so often pointed out the necessity for, a change for the better in the highly combustible construction of metropolitan houses, which can be compared to nothing perhaps so fitly, as to the "laid" domestic fire, with its wood next the coal, and its paper next the wood, all ready for the match.

The total number of "calls" on the Fire Brigade in 1862 was 1,543, of which 109 were false alarms; 131 proved to be only chimneys on fire, and 1,303 were fires; of which 33 resulted in total destruction of buildings, &c., 238 in serious damage, and 982 in slight damage. Compared with the preceding year, the fires of 1862 show an increase of 120; and compared with an average of the previous twenty-nine years, the increase is 497. These returns do not include ordinary calls for chimneys on fire, which may be roughly estimated at 3,000. The totally destroyed list (33), compared with that of 1861, shows a decrease of 20; and compared with the average proportion of the twenty-nine previous years, the decrease is 12.

In many cases the imperfect construction of the buildings, and the combustible materials of which they were composed, rendered the extinction of the fires impossible until great destruction of property had taken place.

Referring to the introduction of land steam fire-engines, Captain Shaw states that their superiority has now been proved beyond the possibility of dispute. Many serious and threatening fires have been successfully controlled at an early stage by these engines; one great advantage of which is the diminution of damage by water, which is driven with such force by steam that almost every drop does its duty, and very little is wasted. Telegraphic communication has now been established between the central station in Watling-street and the other principal stations.

The monthly summary of fires shows that there occurred, in January, 106; in February, 112; in March, 92; in April, 111; in May, 106; in June, 92; in July, 121; in August, 136; in September, 119; in October, 86; in November, 100; and in December, 122: total, 1,303. Of this number 494 occurred from unknown causes. Of the rest, 198 happened through the careless use of candles; from gas, 124; from defective flues, 96; from lucifer matches, 15; from smoking tobacco, 24; from sparks from fire, 95; from spontaneous ignition, 17; from overheating stoves, 28; from hot

ashes, 19; from airing linen, 10; from children playing with fire, 27; from intoxication, 9; from naphtha, 2; and the remainder from various causes. Captain Shaw concludes his report with the following comparative table of fires in several of the principal cities in Europe and the United States:—Philadelphia, approximate yearly average, about 363; New York, 370; Berlin, 260; Baltimore, 255; Brooklyn, 140; Hamburg, 244; Boston, 160; Dublin, 120; Charleston, 59; Paris, 244; Manchester, 206; Liverpool, 176; Edinburgh, 101; Birmingham, 95; Bristol, 89; Belfast, 31; and London, 1,303.

THE ARCHITECTURAL ASSOCIATION.

THE ordinary meeting of members was held on Friday evening (the 9th inst.), at the House in Conduit-street, the President (Mr. Thomas Blashill), in the chair.

Mr. S. Wright, 2, Alexander-road, Upper Holloway; Mr. Young Bolton, Angel-court, Throgmorton-street; and Mr. W. Trimmer, Bayswater-road, were, on ballot, elected members of the Association.

The Honorary Secretary read a letter from the Bristol Society of Architects, in answer to a circular from the Association, on the subject of the approaching architectural examination, in which Mr. E. W. Godwin (writing on behalf of the Bristol Society), inclosed a copy of a resolution lately passed by that body to the following effect:—

"That the principles of the scheme for architectural examination as proposed by the Royal Institute of British Architects, are fully recognized by this Society as of the highest importance to the profession, and this Society will endeavour practically to assist by encouraging candidates whenever an opportunity arises."

Mr. L. W. Ridge then read a paper "On Architectural Criticism," in the course of which he observed that as a rule architects did not appear to be amiable critics, as they generally detected faults before conceding virtues. The cold criticism usually given to modern works contrasted strongly with the respectful terms in which they spoke of ancient buildings. This was, perhaps, to be traced to the circumstance that some architects were in favour of some particular style which they considered most suitable to modern requirements; others desired to see nothing beyond the correct reproduction of an ancient style; while others were striving after a Victorian architecture, in which novelty should be the most prominent feature. The mass of the profession, however, took a middle course, and while desiring conformity with the general principles of the school in which they had learned, still wished to see features introduced in harmony with the age in which we live. Such considerations as these were, he thought, quite inapplicable to the buildings of past ages; and thus, however enthusiastically one architect might believe in Early English, he need not necessarily deprecate Perpendicular, nor ignore the beauty and grandeur to be found in works of the Renaissance. Neither was it necessary that the student educated in the acknowledged Classic and Gothic should regard all other styles as rude, barbarous, and unworthy of his attention. It was one thing to be a hearty advocate of a style, another to speak or act as if it alone was worthy of consideration. It was necessary to bear in mind that a style could not be estimated by the state of civilization of those who invented it. The fallacy to which such an assumption might lead was shown by the low opinion in which Gothic architecture was held by generations only just passed away. Having pointed out the peculiarities in the various early types of Eastern architecture and the ornamentation characteristic of Indian and Moorish buildings, as distinguished from the Classic, Mr. Ridge proceeded to refer to the utilitarian and artistic elements as applicable to modern buildings. He contended that many of the objections urged by utilitarians who argued against churches in which the clergyman could not be seen by the whole of his congregation during portions of the service might be met by making the building larger than was absolutely necessary to accommodate the average number of attendants. With regard to grandeur and sublimity of effect, Canterbury Cathedral might, he thought, be quoted as a happy illustration. The choir showed a multitude of shafts and other features of the ordinary scale united in one grand whole, while the nave had the inner mouldings of the piers carried up from the basis to the vaulting with but two insignificant breaks; and then, after a small capital, the line was continued along the ribs, so that this feature alone attracted attention and impressed the beholder with a sense of height. St. Peter's at Rome, where everything was on a gigantic scale, was, however, so harmoniously constructed that many visits were required to realize the intrinsic vastness of its proportions. Although a just sense of proportion was not, perhaps, as generally appreciated by the public as might be expected, ornamental features were universally recognized. Abundance of ornament applied to a building was not without its charms, but the educated eye would always prefer quality to quantity. Ornament, to be duly valued, must be examined at leisure. To be worthy of examination, it must be of novel, not of copied or oft-repeated, design; for if the same forms were constantly found, they ceased to be of use except so far as to tell us the general design, and for that a few bold strokes would serve better than elaborate detail. He feared that much of what he had said was directed rather towards making them better architects than better critics. Love for their art would, doubtless, ever be the best spur to exertion; still in these practical days the criticism which young architects would have to submit to would, no doubt, serve to inspire them to search for the truthful and beautiful in art. By this means alone could they hope to imitate those who had gone before them, and thus alone could they hope to replenish the lamp of all the seven that now burned with the dullest light.

The President, having complimented Mr. Ridge on his paper, observed that what the student wanted was not some one to agree with him, but some one to differ with him and criticize his work. The criticism to which the contributions to the class of design were exposed had, in his opinion, a most salutary effect; and he regretted that a greater number of the members of the Association had not joined the class.

Mr. R. P. Spiers observed that the vast dimensions of St. Peter's, were not at first sight appreciated by the beholder; but this was not to be considered a blemish in the architecture, as a really grand design was rarely appreciated at first sight. This remark, he thought, applied not only to St. Peter's, but to other buildings, such, for instance, as the Arc de Triomphe, at Paris, the enormous proportions of which could scarcely be appreciated without repeated examination. In his opinion, it was most desirable that students should copy the best works as often as possible, so as to become thoroughly familiar with particular styles. In this respect Classic students had an advantage over Gothic, because they were obliged to study the five orders, and copy them over and over again; whereas Gothic students, by adhering to one idea alone, might frequently be led into perpetration of eccentricities. With regard to ornamentation, he did not approve of foliage in panels, unless it was very carefully sculptured.

Mr. North submitted that there ought to be something in the character of a building, either in proportion or general grouping of details, which should strike the beholder as out of the common. In his opinion, the true way to arrive at a new style was to study the old, and then endeavour to give expression to one's thoughts.

The President said he had recently sketched a remarkable doorway in the country, which was an illustration of beauty depending wholly upon proportion, without ornament.

Mr. Mathews recommended careful copying as the groundwork of study. By copying examples of Vitruvius and the best ancient masters, it would be impossible to go wrong.

After some further discussion, a vote of thanks was passed to Mr. Ridge for his paper.

The President announced that the next drawing in the class of design would be a street lamp; and that on the 23rd inst. Mr. J. W. Papworth would read a paper "On the Use of Libraries."

THE WASHHOUSES IN PORTPOOL LANE, GRAY'S INN LANE.

SOME time since we mentioned the risk which then existed of this place being altogether closed, in consequence of the annual loss which had for some years been connected with it. At that time we urged the pressing necessity of keeping the washhouse open. It is satisfactory to find that it is used by a vast and increased number of poor persons of the neighbourhood; and that, in consequence of more economical management and some other causes, it is likely that a more favourable balance-sheet will appear. A vast amount of good is done by the means of cleanliness which are here afforded; and it would be of advantage if the parishes, instead of levying high rates upon such institutions as this, were, in case of necessity, to afford assistance.

It is inconvenient, and almost impossible in thousands of instances, for the working and poorer classes to use the necessary means of cleanliness in their inconvenient homes; and yet, besides attention to proper drainage, ventilation, the cleanliness of the rooms and the skin of the inmates, much depends upon the regular and thorough washing of bed-linen and the various kinds of clothing.

To all, rich or poor, but particularly to young children, attention to the most scrupulous cleanliness is a necessary element of health; and it should never be forgotten that the skin which covers the body has many important uses:—it is the safety-valve of health and life; and so delicate is the machinery by which matter is thrown off, that the ducts and tubes provided for the skin are not more than the 450th part of an inch in diameter, and that on the surface of the body their number has been estimated at many millions.

When the breathing of the lungs is stopped the blood becomes poisoned, the brain loses its power, and the heart growing too weak to carry on the circulation, death ensues; and in the same way, to a certain extent, the purity of the blood and the state of health depend on the cleanliness of the skin and of clothing. Besides this, there are other offensive matters emitted from the skin, which render long-worn body-clothing offensive and unwholesome to the wearer and others. Most persons perspire more in the night than in the day; nevertheless—particularly in the winter time, when drying clothes is difficult—it is by no means uncommon amongst a certain class to use the bed-covering without change for several weeks or even months.

To those who labour, the attention to cleanliness of the skin and clothing is especially necessary.

We all know the difficulties which exist, especially amongst the poor. Every facility that can be afforded in this way must be of much advantage. The public baths, so far as they have been brought into operation, afford the opportunity of personal cleanliness at a comparatively small cost; and the washhouses, also, enable many to wash and dry their clothes, &c., who otherwise would not be able to do so. We therefore trust that if difficulties should again occur in connexion with the Portpool-lane building, in a neighbourhood where it is so much wanted, no measures for closing will be adopted before the circumstances are made known; and, if needful, an appeal be made to the public.

OPENING OF LENDAL BRIDGE, YORK.

LENDAL BRIDGE, over the Ouse, connecting the south-western and north-western parts of the city of York, was formally opened on Thursday in last week, by the Lord Mayor of York; the proceedings terminating with a banquet at the Mansion House. The opening was attended with much ceremony, as appears from the reports in the local *Herald*.

The bridge consists of a single arch of the Tudor style; has a span of 175 feet 2 inches; and is 25 feet in height from the summer level of the river to the crown. As the foundations of the intended girder bridge had been put in in raking lines, the ribs of the present bridge had to follow those lines. The foundations (as proposed by Mr. Page) were extended to within 7 feet of the water towers; and this enabled the contractor to provide for the erection of two lodges, designed by Mr. G. G. Page, son of the engineer, at an estimated cost of 503*l*. In the construction of the bridge six ribs of immense size are tied together with cross girders and braces tied and stayed; there being bearers for the corrugated iron plates which had been prepared for the girder bridge, and which have been used up in the present bridge. The iron contains one-tenth of wrought-iron after Morries Stirling's patent for casting cast-iron with a mixture of wrought-iron. The parapet consists of a series of quatrefoils very much resembling the parapet of the nave of York Minster. The footpaths on the bridge are formed of the Hopton Ward stone, a white paving stone which has been used at the Houses of Parliament. At the margin of the footpaths is a cast-iron curb, which forms the ribs of a gutter as well as a tram. The paving of the carriage-way is of Mount Sorrel granite, of a red colour, approaching to the red porphyry of Egypt. The painting and decorating of the bridge were intrusted to Mr. G. Hartley and Mr. F. Moore, both of York. The general colour is a lightish green grey. The extreme width of the bridge is 37 feet 9 inches; the width of the footpaths 8 feet 3 inches; and the

width of the roadway 21 feet 3 inches. The weight of the bridge is at least 380 tons, and it is believed to be of sufficient strength to carry a railway train.

Messrs. Hawks, Crawshay, & Co., were the contractors, and Mr. Graham the resident engineer.

YORK AND THE RAILWAYS.

WITH reference to the completion of Lendal Bridge mentioned elsewhere, a correspondent from York writes as follows:—You will perceive, Mr. Editor, that by the account in the *York Herald*, Mr. Page has been asked by the directors of the railway company, whether the bridge will carry an engine and train. This points in the right direction;—to a central railway station, between Little Blake-street and Stonegate, by the formation of a square in the front of the Minster, a precedent for which is now in actual operation, viz.,—"The Citadel Station, Carlisle," near Carlisle Cathedral; and when it is considered that the number, who travel from Scotland and the North to London in twelve months is upwards of a million—the *Athenæum* gives the number at two millions from Scotland to London in twelve months,—not quite a million going by way of Lancashire;—it ought to be done, and the city of York would receive at least 150,000*l.* a year benefit from the measure. The railway company might erect a large hotel in the square, and it would have the further advantage of their making the present railway station into a goods station, thus saving them the expense of another goods station, and the necessity of going through the ancient city wall, by being obliged to make an arch through the wall opposite Rugier-street.

FALL OF WAREHOUSE, SOUTHWARK.

PART of one of the back warehouses at Messrs. Moser & Sons', of High-street, Southwark, iron merchants, fell late on Monday night. The warehouse consisted of one story only. It is about 80 feet in length, and between 30 and 35 feet wide, and was covered with a corrugated iron roof. The walls are 20 feet high. In the centre of the building, running its whole length, was what is technically called "a horse," which is used for stacking, or leaning bar-iron against on each side of it; and it is stated that, from examination of the *débris*, it appeared that the timbers of this horse had decayed and become unequal to their load, and it fell against the external side wall of the warehouse, which also was loaded with bar-iron; the consequence of which was, that this wall was thrown down, and carried with it the roof. The long bar-iron falling against some other warehouses, across a narrow alley, called Birdcage-alley, in the purlieus of the Mint, the walls of these warehouses were also much damaged, and the alley completely blocked up. Fortunately no loss of life or personal injury ensued.

NEW STYLE IN GARDENING.

THE introduction of a geometrical style in laying out grounds and gardens has become of late so prevalent that a few remarks may not be unwelcome in the *Builder* on the subject, inasmuch as the lawn and parterre must always have a close affinity to the domestic structure. All that we view daily in the park borders affords pleasing proof of the advance of floriculture and of the increase and improvement in our stock plants; and so far as geometric order is used in details of these grounds, there is nothing to be objected against; but on looking into the "Horticultural Gardens," the great national display in conjunction with the Exhibition, it is impossible not to be struck by the glitter of coloured walks, which have the appearance of red, yellow, blue, green, and other tinted ribbons, cunningly wrought through the intricate flower knots, which form the principal area of the twenty-acre reserve.

That the accuracy of the exquisitely-wrought box borders is laboured and telling, none will deny: these are the works of an artist; and it is equally palpable that the colours of the walks are brilliant. Now, however, winter has set in and the flowers decayed: when the mould is raked and laid by in ordinary for winter, these gaudy bands winding symmetrically over the russet earth wear the appearance of true-lovers' knots; and viewed in connexion with the fountains, balustrades, terraces, &c., make up the total of a formal Dutch garden; but when the flowers were in bloom,—those objects for which such cunning devices were but meant to be the garniture,—what was then the effect of all this polychromatic decoration? Why, simply that it subdued the effect of much natural beauty!

It is not the question whether the South Kensington Garden, surrounded as it is by high buildings and arcades, is the proper site for horticultural growth, since that point has been long conceded. The position, within the metropolis, may be convenient for the exhibition of plants, flowers, and fruits grown elsewhere; but in the midst of smoke it has long ceased to be appropriate for the raising of seedlings or for the conservation of plants.

Some hardy and beautiful flowering shrubs there are, which might thrive and bloom within the imposing boundaries. This is demonstrated by the gorgeous display of the neighbouring Kensington flower walk; but the aspect of this costly inclosure, its nakedness of floral or arborific garniture, leads one to inquire, might it not be improved by the introduction of some well-grown shrubs and trees, which would impart to it more of the hortulan if not sylvan character?

Exhibitions of fruits and flowers occur, perhaps, six or eight times a year; and these, together with the amount collected from Fellows of the Society, possibly do yield a fund sufficient to support the grounds and conservatory. It is more of a public arena for promenade than horticulture.

The broad walks and terraces, as laid down, are, perhaps, essential for the crowds that sometimes frequent the place; and considering the many architectural evidences within and surrounding it, even the winding walks of gaudy colours might be suitable here, however incongruous they might be in a rural garden. Still as a border or setting for rare planted flowers, nothing that could be invented would more effectually mar and neutralize the delicate bloom of nature's tender nurslings. Let them stand, then, as they are,—highly wrought proofs of the gardener's skill; but, in the name of Flora! do not suffer vitreous walks to be farther extended, to the detriment of our best collections.

QUONDAM.

BANKS AND NORTHCOTE.

SIR,—In a note appended to the paper headed "New Materials for the Life of Thomas Banks, R.A.," which appeared in the number of your paper of the 3rd inst., there is a reference made to me respecting the portrait of Mr. Banks painted by Northcote. I wrote immediately to my friend Mr. Ambrose Poynter, the architect; who married the eldest daughter of Mrs. Forster; and in reply I have received from him the following letter:—

"Dover, 8th January, 1863.

My dear Hardwick,—I shall be happy to supply all the information I possess relating to Mr. Banks; but since I can only write by my *womanuensis* (as Tom Hood says) it is difficult for me to put anything into shape. I must content myself with giving you the crude facts, and begging of you to make use of them in any way you please.

The portrait of Mr. Banks by Northcote came into my possession in 1832. I am surprised at Mrs. Forster writing in 1830 (see her letter to Mr. Cunningham in the *Builder*) that she did not know where it was, as she had no difficulty in directing me to the place where it had been put for safe custody, in London, ever since 1814. I received at the same time a portrait of Mrs. Banks, also bearing the name of Northcote; but I am very much mistaken if the final touches, at least, are not by the hand of Sir Joshua Reynolds: if not, it is certainly the best portrait Northcote ever painted. Both these pictures were exhibited at the British Gallery, I think, in 1847. I have also a very beautiful oil portrait of Mrs. Banks, painted by Ozias Humphreys, and another by Northcote of Mrs. Forster: all these were the property of Mrs. Banks.

Of Mr. Banks's own works I have but three,—the angel carved in wood, mentioned by Mrs. Forster as an ornament for her harp; a plaster cast of an alto-relievo, 4 feet 10 inches long by 9 inches wide, representing horses attacked by lions; and a basso-relievo, also cast in plaster, 4 feet 9 inches long by 8 inches wide, representing a Hindoo religious ceremony. It consists of twenty-three figures, and combines a character thoroughly Oriental with a purity of treatment thoroughly Greek. I do not know for what purpose this composition was designed. I have also the drawing mentioned by Mrs. Forster as one of the last ever done by Sir Thomas Lawrence, and the drawing made by Sir Thomas Lawrence when a child, which I presume to be his earliest extant work: it is a street view in Devizes, with the church, done in pen and ink.

The collection of drawings by the old masters made by Mr. Banks was divided by Mrs. Forster between M. de Triqueti and myself, about four years before her death. She took great pride in this collection, and was always ready to exhibit it to any one who professed to take an interest in art. Those now in my possession are about 200 in number, of which about sixty are genuine works of the great masters. Two by Raffaelle were photographed about five years ago for the collection of H.R.H. Prince Albert: the remainder are all good specimens by artists of secondary note in the Italian school. Those belonging to M. de Triqueti, of course, remain in Paris. There is a mask taken from Mr. Banks's face in the Royal Academy. Mrs. Forster desired it should be placed there, and it was sent through me by M. de Triqueti after her death.—A. POYNTER."

I may add that I have in my possession a beautiful work of Mr. Banks's,—a cast in plaster of a female figure kneeling, representing "Filial Piety;" also a basso-relievo in plaster, a very early work of Mr. Banks's, the subject being the Death of Epaminondas. M. de Triqueti, to whom Mr. Poynter refers in his letter, is the eminent sculptor in Paris, who married one of Mrs. Forster's daughters.

PHILIP HARDWICK.

DRAINAGE OF THE WESTERN AREA OF THE METROPOLIS.

WE are very glad to hear from Mr. Thwaites that the Board of Works, in committee on the 13th, agreed to a unanimous recommendation to rescind their resolution of the 29th of June, 1858, directing the formation of deodorizing works at Fulham; and advised that the sewage of the western area be carried into the Low Level sewer, to be conveyed to Barking-creek—a recommendation which there is little doubt will be very generally approved by the Board on (this) Friday.

COMPETITIONS.

Hartlepool Mechanics' Institute.—We understand that in answer to the advertisement which appeared in our columns, eighteen designs were submitted for this building, and that the premium has been awarded to the design bearing the motto "Labor et Spes," by Messrs. Pritchett & Son, of Darlington.

Amicable Society's Schools, Scarborough.—Forty designs were sent in by thirty-three competitors. A design by Mr. Stewart of that town, was selected. Tenders were obtained, ranging from 2,000*l.* to 1,400*l.* A correspondent points out that the committee said in the instructions, "They hoped to keep the estimate within 1,000*l.*" This, however, as times are, is not a very grave charge.

Sheffield.—A correspondent says,—"I beg to hand you one of the curiosities of the old town of Sheffield, which has appeared in the *Independent*:—

'TO ARCHITECTS, MILLWRIGHTS, ENGINEERS, AND OTHERS.

Wanted, Plans, Specifications, and Estimates for the Construction of FURNACES of One Hundred Holes.

Also, for FORGE of Six Steam Hammers, ranging from Five Tons to Ten Cwt., with Boilers and Connexions complete. and ROLLING MILLS, with Engines and Boilers, capable of Rolling about 150 Tons per Month, of Sizes from Six to One Inch Diameter.

Plans and Specifications to be lodged on or before the 31st inst., addressed, ——.

N.B. All Plans will be kept, but only the one adopted paid for.'

I think such men ought to be exposed in your Journal."

Exeter.—The committee for rebuilding the church for the united parishes of St. John and St. George, Exeter, having invited the architects residing in Exeter to send in plans, received five sets, marked "Apta;" "Devoniensis;" a red cross; "Excelsior," and "Desideratum." The plans having been examined, the committee selected the design marked "Excelsior." On opening the envelopes the design was found to be by Mr. W. F. Cross; and the one marked "Apta," selected as second, by Mr. J. Hayward.

ENLARGEMENT OF SUSSEX LUNATIC ASYLUM. At the East Sussex Sessions, at Lewes, the visiting justices of the Sussex Lunatic Asylum, at Haward's Heath, reported that there are now 500 inmates in the asylum, which was still very much over-crowded; and they recommended that the sum of 5,000*l.* be granted, which would be sufficient to afford accommodation for 100 additional patients. This recommendation was carried by a large majority.

THE NATIONAL LIFE AND DEATH RECORDS.

IT is only by personal inspection of our great public and private establishments, that any idea can be formed of the gigantic operations which in this country are being daily carried forward. The Bank of England, the Mint, the Treasury, the Admiralty, the Board of Trade, and Departments of Inland Revenue; the docks, vast stores in vaults and warehouses, immense manufactories, workshops, and many other places, must be examined before any one can form a just idea on the subject.

There is one public establishment the results of which are perhaps more frequently under the public notice than those of any other; and yet its nature and extent are comparatively little known: we refer to the Registrar-General's Office in Somerset House, where the records of life, marriage, and death are carefully arranged in their proper order, and stored away for future use; and whence come those useful health reports, which ought always, and frequently do, direct attention to dangerous conditions which need care, in order to preserve health and prevent the waste of human life.

On entering the western archway of the main entrance to the Quadrangle of Somerset House, after passing the lodge of the porter, comes the entrance to the Registrar-General's apartments. A spacious hall meets the eye. On one side is a small office from which inquiries are answered; and on the other, on a door, are the words—"The Search-room." To this apartment we will return by and by; but first will ascend the noble staircase, noticing the contrivances for hoisting packages and other bulky articles which are constantly arriving; and when we reach the first staircase, we note the elegant finish of the doorways and the extreme beauty of the decorations. The exterior of Somerset House is one of the finest in the metropolis; and although various alterations have been necessary for adapting it to the varied purposes for which the building is now used, the interior is well worthy of the architect. Besides, this staircase has many rare associations, for it was familiar to the lovers of art in the early days of the Royal Academy. In the rooms above, the annual exhibitions of paintings and sculpture were held, until the removal of the Academy to Charing-cross. This way have often passed Reynolds and the contemporary painters of his time, and Dr. Johnson, Burke, Goldsmith, and the brilliant band who were so closely knit together in friendly union. Since then Turner, Etty, Wilkie, and a host of eminent painters, sculptors, and patrons and admirers of art have visited here.

One of the doorways on the first staircase is the entrance to the large and finely-proportioned apartment which was once the council-room of the Royal Academy, and which is now appropriated to the use of the Registrar-General. The ceiling is elaborately decorated with wreaths of flowers, monograms, and other devices. In the centre there was formerly a picture, painted by a good hand; and on the panels of the walls there were coloured designs. These pictures were removed with the other effects of the Academy to Charing-cross.

One of the exhibition-rooms on the next landing now contains a valuable class library of Parliamentary and other works connected with population, its history and conditions, &c., &c. Above the mantelpiece there is an engraving of a well-known painting, showing the visitors and pictures at one of the early Royal Academy exhibitions.

There are other apartments here which were prepared by direction of George III. for the Society of Antiquaries, and which for some time were occupied by the members of that body. On the ceiling are the royal monograms and those of the society. Here the celebrated Swiss calculating machine is now kept; and various reports required for serial and other publications in connexion with the public health, are prepared. In other apartments will be found Sir Horace Mann, Dr. Farre, and other able workers connected with the staff of the Registrar-General.

It is in the rooms above, however, that we begin to form some estimate of the nature of the task of preserving in order the registers of our population. In one part of the premises the registers of births, marriages, and deaths are received from the registrars of the metropolitan districts, and from those in the provincial towns and throughout the country. These are sorted according to their date and the alphabetical running of the names; and, having been carefully tested as to correctness, are arranged on large pages, which are afterwards bound up in the huge volumes which will be found down below. This is a labour which, day after day throughout the year, occupies a number of persons, some of whom work in the large room, lighted from the top, which formerly held the chief part of the pictures of the Royal Academy exhibition.

About half way up this apartment there now runs a gallery, furnished with desks, seats, &c., which is usually occupied by from twenty to thirty clerks, whose labour is to write in a bold and distinct hand the names, date of a birth, and place at which it occurred, together with the number of the original report, and the volume in which it will be found; and the same as to marriages and deaths. These lists are all given to the clerks in alphabetical order, and they are copied in the same rotation on sheets of parchment.

A View in the Vaults.

The chief part of the persons who are here employed are law-writers, who complete their lists with singular uniformity and neatness. Great pains are taken to preserve this uniformity; and the registrars throughout the country are supplied not only with the same description of paper, but also the same kind of ink. With great rapidity those clerks perform their work; as each sheet is completed it is taken away, and in due course of time forms part of one of the volumes contained in the "Search-room."

The large number of persons with what may be considered to be odd names who are born, get married, or die throughout England on the same day, surprises one: even where there are three or more names, the coincidence is extraordinary. As might be expected, the number of John Browns, John Smiths, Jane Robinsons, &c., is great; but one would scarcely expect to find several John Obadiah Browns, and other names quite as uncommon.

This kind of copying is very monotonous; and, we are told, affects the memory, and sometimes the reasoning faculties, of the clerks. In such a completely mechanical manner is the work performed, that one of these men might copy the account of the death of his own wife or child without particular notice.

Descending to the search-room, we find it a very large apartment of great height. In part of the central space on the floor is an inclosed desk, which is occupied by the superintendent of the room. In other parts are tables and seats. Round the apartment run several galleries, which are reached by a spiral iron staircase. There are rows of large thick volumes, which are marked with the various years since the new system of registration was established. They also run in volumes, and are so marked that the marriages can be easily distinguished from the births, and so forth. In this room there are usually a number of people waiting, either for the purpose of searching for registers, or of obtaining copies of such as may be required. The books here, numerous as they are and imposing in size, are, like the volumes of the catalogue in the reading-room of the British Museum, only a reference to the long array of volumes which stand elsewhere.

If the person inquiring knows the date of a birth, the exact name, and the locality in which it took place, the volume in which the original is will be found in a few minutes in the vaults below, and be presently passed by an attendant up an open trap-door into the search-room, when it can either be examined, or a stamped copy of it be made. The cost of a search is small; and for a stamped copy, which is legal evidence in any court of justice, the charge is 3s. 7d.

But the most wonderful part of this office is the vaults, which are of immense length, and which run in rows under the building, and for a considerable distance below the pavement of the Strand. These subterranean chambers have been thoroughly dried and ventilated. They are always kept at a suitable temperature by means of hot-air pipes, and each avenue is lighted with gas. We have seen few things in the metropolis more solemn or imposing than this great library of the dead and the living. Of such great length are the perspectives of the vaults that they seem to vanish at a point; and not only are the walls, as high as the springing of the arches, lined with cases filled with books of record, but along the centre spaces are tall partitions, against which are cases occupied in the same manner as the others.

We notice that the books are bound in different colours,—some scarlet, some green, and the others black. The scarlet-bound volumes contain certificates of births: the verdant colour, chosen for reasons which we are not able to explain, contain the list of marriages; and the sombre black tomes are filled with the lists of the departed. In these books of life and death are the names of princes and peasants, philosophers and fools, the good and the wicked, the men and women of wealth and fashion, and the miserble and half-fed pauper. The records of the Registrar-General, like the grave, level all distinctions; and the death report of the great Duke of Wellington shows of no greater importance than that of Thomas Giles the ploughman, or Private Jones, of a militia regiment. Singularly silent are those vaults themselves: the white walls and the black, green, and scarlet books, the gas-lights not sufficient to illuminate the whole space, present pictures which have an effect upon the mind; and there is heard a dim roar from without, and a noise like distant thunder when the throng of carriages rolls along the Strand.

There is here, too, an apartment in which the registers of the Fleet marriages are kept, and the register-books from many Dissenting congregations of the metropolis. Some of these are old, and amongst the names in them will be found those of Daniel de Foe and John Bunyan.

NATIONAL MEMORIAL OF THE PRINCE CONSORT.—The arrangement that the seven sets of designs for the proposed memorial in Hyde Park should be sent to Osborne, as we mentioned last week, has been changed. It is now directed that the designs are to be sent to Windsor Castle; but the time for doing so is not fixed.

LONDON STREET-ARCHITECTURE.—WAREHOUSE, BOW CHURCHYARD.

MESSRS. TRESS & CHAMBERLAIN, ARCHITECTS.

LONDON STREET-ARCHITECTURE.

WAREHOUSE, BOW CHURCHYARD.

THE warehouse that has just been erected in Bow Churchyard for Messrs. Copestake, Moore, Crampton, & Co., as an addition to their present extensive premises, was commenced in the autumn of 1861, and is now fast approaching completion. Considerable delay was occasioned at the outset in consequence of the discovery of an ancient brick arched gallery, 13 feet wide, 10 feet high, traversing the entire length of the site, and containing 300 yards of solid soil. It is thought that this passage was a portion of a subway for the escape of fugitives from the sanctuary of St. Mary-le-Bow to the river: traces of it are still existing under a warehouse in Garlick-hill.

The clearing out of this gallery (which had been used as a cesspool for centuries) for the purpose of getting a solid foundation for the internal iron columns retarded the works, as it could necessarily only be done at night. It was afterwards still further excavated on either side, and forms a sub-basement at a level of 23 feet below the street paving.

The building consists of sub-basement, basement, ground and five upper floors. The sub-basement is a store for packing cases, &c.: the basement, ground and four upper floors are devoted to the various branches of Messrs. Copestake's business. Additional light to that obtained from the front is provided by a well 51 feet 6 inches by 13 feet 6 inches, extending throughout the floors, and terminating with a curved glass lantern. Over the fourth floor is a fireproof flat, on which are built the kitchen and offices for the accommodation of the entire establishment. The roof is covered with thick zinc plates stamped to a scale pattern, specimens of which were exhibited in the International Exhibition last year. They have been recently used in Paris, but are new to this country.

Access to the new building is obtained solely from the old warehouse, the floors of which are on the same level, and consequently some difficulty has been experienced in the treatment of the window openings in the façade to mitigate the want of height in the floors.

The front is of Portland stone, and the openings are filled in with enamelled bronzed iron sashes from designs furnished by the architects. Peterhead granite and serpentine marble have been used in the small columns and panels of the elevation. The carving has been well executed by Mr. Redfearn: the caps to the granite columns and the cable moulding round the second floor windows deserve notice.

The front arches are carried on large cast-iron columns made by Bunnett & Co. (who also made the sashes), the caps and other ornaments having been cast separately. Mr. Anley is the builder, Mr. Cooper the clerk of the works. The cost, exclusive of fittings, is about 15,000*l*. Messrs. Tress & Chamberlain are the architects.

CHURCH-BUILDING NEWS.

Ketton (*Rutland*).—The chancel of the cross church of St. Mary, Ketton, is about to be restored. A design has been supplied by Mr. Graham Jackson, one of Mr. Scott's earliest pupils. The Rev. F. S. Sutton, a son of the late Sir Richard Sutton, Bart., has just presented a second painted window to this church: it has been inserted in the south wall of the south transept.

Chipping-Norton (*Oxfordshire*). — The new Baptist chapel here has been opened. The edifice, which is in the Gothic style, is erected on what was an open space between the old one and the street, and the latter has been converted into school-rooms. The designs were furnished by Messrs. Gibbs, Thomson, and Colbourne, of Stratford-on-Avon, architects. The building has been carried out under their superintendence by Messrs. Orchard, of Banbury. The total cost of the erection of the chapel, altering the old one, lighting, seating, &c., was 2,300*l*.

Tring (*Herts*).—The church here was reopened for divine service, after a partial restoration, on the 1st instant. A small decorated window in the west end of the north aisle has been brought to light, having been blocked up by a wall and gallery. The restorations have been entirely confined to the interior of the church, the exterior having been left for want of funds. New roofs of oak, of the old examples, have been put on the nave, chancel, and south aisle. That of the chancel has been raised about 5 feet, so as not to intercept with the chancel arch, as heretofore. These roofs have been covered with new lead. The old high-backed seats have been replaced with open benches of wainscot, backs and fronts and next gangways, and bench-ends have been filled with carving. The gangways throughout have been paved with Maw's encaustic tiles. The chancel has been paved with geometrical tiles, made expressly by Messrs. Maw & Co., from patterns taken from old tiles dug up during the excavations in the church. The gallery which formerly blocked up the tower has been removed, and exposes the west window to view, which is a new three-light window, of Ancaster stone, and with Perpendicular tracery, and has been filled with stained fleur-de-lis glass. A new window of Ancaster stone has been put in the east end—a five-light, with Perpendicular tracery, and has been filled with stained glass by Messrs. Clayton & Bell. The subjects are the principal events of the life of Christ, with Old Testament analogies to the same, and is the gift of the Rev. J. Williams, of Park House, Tring. The windows of south aisle and south clerestory have been filled with patent rough stained glass of various shades, intended to subdue the rays of the sun, and is in lieu of blinds, and was put in by the same artists. The whole of the stonework to the interior has been cleaned and restored. The old plastering has been hacked off, and finished in rough stucco. The south doorway has been restored with Ancaster stone and polished Purbeck shafts, and is hung with two new wainscot doors with ornamental hinges. This work is the gift of Mrs. Williams, of Park House, Tring. An organ, built by Messrs. Hill & Son, London, has been placed in the north aisle, raised and supported on brackets. The case was designed by the architect. The organ is the gift of the minister, the Rev. H. A. Harvey. The new pulpit is of oak, with carved panels, and is octagon on plan. The church is heated with a hot-air apparatus, by Messrs. Haden & Sons, of Trowbridge. The carving to seats and pulpit was executed by Mr. Forsyth, of London. The gas-standards and metalwork to altar-rail, &c., were provided by Messrs. Hart & Son, of London. The new font is by Poole & Sons, Westminster. We believe this restoration has cost about 4,000*l*. The whole has been carried out under the superintendence of Mr. W. Slater, architect, London. The contractor was Mr. G. Cooper, of Aylesbury, Bucks. Mr. W. Thompson was clerk of works.

Stourbridge.—The Unitarian Chapel alterations having been completed, the chapel was formally re-opened on the 21st ult. The most noticeable addition to the chapel is the organ niche, constructed at the western end, and into which the organ has been removed. An arch, supported upon enriched piers, with moulded bases and carved stone capitals, forms the opening into the chapel. The choir is arranged in front of the organ, and in a slightly-raised portion. On the outside of the chapel buildings have been erected, comprising a large library and a minister's room, the latter communicating with the pulpit, which is of stained oak. An apparatus for heating the chapel has also been fixed. Much additional sitting accommodation has been provided in the above alterations. The architect was Mr. F. S. Smith, and the works have been executed by Messrs. Allsop & Son.

Bristol.—The Hensman Memorial Church has now been consecrated. It is situate near the parish church of Clifton, being built on land which had formed part of Thorny-close, and belonged to the Society of Merchant Venturers. The edifice contains 400 sittings, is intended as a chapel of ease to the mother church of Clifton, and is dedicated to St. James the Apostle, though designed as a memorial of the Rev. J. Hensman, who has completed the fiftieth year of his ministry at Clifton. The architects were Messrs. Pope & Bindon. The edifice is in the Decorated style, and consists of nave, chancel, and vestry. The length of the nave is 83 feet, its width 33 feet, and its height 57 feet. The chancel is in the form of an apse, 22 feet long, and 23 feet wide. There is a stone bell turret, with two bells, over the chancel arch, and there are a north and western porch. The walls are built of Hanham stone, with freestone dressings; and old red sandstone from Sir William Miles's estate, is introduced in the relieving arches over the windows. The ceiling is of open timber; the wood being stained deal; and the seats are of the same material. The floor of the church is of wood, and there is a crypt under the church 10 feet deep, containing an apparatus for warming the church. The chancel is paved with Moore's encaustic tiles of an ornamental pattern. The shafts of the chancel are of Purbeck marble, and those at the vestry door are of Devonshire marble. These shafts were presented by different donors. The communion rails are of wrought iron, painted and gilded, and were made by Mr. Butcher, from designs by the architects. An arcade runs round the whole of the chancel, supported on marble shafts, carved with natural foliage. The capitals and bosses in the chancel are carved with foliage of different descriptions. On the chancel is represented the passion-flower. All the windows are glazed with cathedral glass of light patterns; and it is intended to fill the chancel windows some day with stained glass. The carved stone pulpit was given by a lady. It is octagonal in form, with Devonshire marble shafts to the panels, which are carved with diaper: the shafts beneath the pulpit are of Purbeck marble. The general contractor was Mr. Brooks, of Bristol; while Messrs. Lewis & Sons, of Clifton, executed the plastering, slating, and painting. The ground around the church was laid out by Messrs. Baskerville, of Bristol. The entire cost of the erection is upwards of 3,000*l*., of which 300*l*. have yet to be provided.

Great Malvern.—A Roman Catholic chapel has been consecrated at Great Malvern. The chapel is in the Gothic style, and was erected at the expense of the pastor, the Very Rev. W. Scott, from designs by Mr. B. Bucknall, of Rodborough, Gloucestershire. Messrs. Perkins & Edwards were the contractors. The structure, which is dedicated to St. Wolstan, consists of a nave, 80 feet by 30 feet, having three side chapels. At present the building is not complete, but will be so when a chancel and other parts are added.

Ross.—The parish church here has been re-opened. The restorations and improvements have been carried out from designs by Mr. J. C. Buckler, of Oxford, architect, who re-erected the spire some years ago. The high pews have been replaced by low open seats of deal, stained and varnished. The floor has been excavated and lowered, and laid with concrete beneath a wood floor; the passages being laid with encaustic tiles from the manufactory of Mr. Godwin, of Lugwardine. Two galleries have been removed. The organ has been improved and repaired, and removed from the tower to a gallery especially provided for its reception, and the accommodation of the choir; and the space in the tower formerly filled by the organ has been fitted with seats appropriated to the children of the various schools of the parish. Fourteen brass standards distributed over the area of the church were furnished from the manufactory of Messrs. Hart & Son, and fixed by Mr. London, of Ross. Amongst the improvements must be noticed the font, a restoration by Mr. Hards, of Ross, from some fragments of an early one which were discovered in excavating the floor of the church. A heating apparatus has been laid. The accommodation now amounts in the whole to at least 1,000. Mr. W. Deeley, of Ross, builder, was the contractor for the works.

Congleton (*Cheshire*).—Astbury parish church has been re-opened for divine service, having for a long time been partially closed for restorations in the interior. All the walls have been stripped of plaster and the stones dressed. The modern gallery, erected by the late Sir Edmund Antrobus, has been taken down, and the organ (also his gift) has been removed to the south side of the church for the present, its final situation not being fixed upon. A wood screen has been erected to form a new vestry, and three memorial windows of stained glass have been placed to the memory of the late Mr. Randle Wilbraham, of Rode Hall. The chancel, with the ancient carved stalls, &c., is restored; as also the panelled oak roof. The new pews are uniformly arranged. The pulpit has been removed, as its old situation obstructed the view of the windows from the nave.

Whickham (*Durham*).—The parish church of Whickham has been re-opened for divine service, after having been closed for a considerable time, during which it has been undergoing a restoration almost equivalent in extent to reconstruction. The whole northern side of the nave and north pier of the chancel arch required to come down; whilst, to compensate for the loss of space by the removal of the galleries, the area of the church required to be extended. The only side on which this could be done was to the northward; and it was determined to erect a second north side aisle, and also a side aisle to the chancel, removing the old vestry to make way for this. Mr. Salvin was appointed architect; and the parishioners in vestry came to the decision that the new pews should be open. An accession of about 200 sittings was thus obtained, every seat being free, and all of one form and pattern. The church is now capable of accommodating 600 persons. Amongst the numerous improvements is a stained window, situate near the south entrance. It is composed of four compartments each containing a group of figures, the subjects being the Five Wise Virgins, Christ re-

buking Martha, Christ raising Jairus's Daughter, and Christ blessing little Children. They are surmounted by a canopy, mixed with foliage decoration, composed of the rose and lily; and the tracery portion is also minutely ornamented. This window is the work of Mr. H. M. Barnett, of Newcastle-upon-Tyne, and is a memorial to the late Miss Simons. On the east gable is another work by this artist, in the form of a wheel window. In the centre of this is the Lamb, surrounded by a circle of radiating branches, set, as it were, with precious stones. Mr. Wailes is at present engaged on another large window for the same church, in memory of Miss Jeffrey. At the west end of the north aisle is placed a stained-glass window. The design consists of two groups—"The Nativity of our Lord," and "The Presentation in the Temple;" above which are canopies. The window is the gift of an artist in the establishment of Mr. Wailes.

Houghton-le-Spring.—A great improvement has been made in the chancel of the parish church by the addition of an inlaid marble reredos, of the diamond pattern, with an ornamented Greek cross in the centre. Its not appearing to have a good finish, remarks the *Gateshead Observer*, induced the rector (who has been at the entire expense) to have a kind of stone frame, with a battlemented top, made for it, and the work was intrusted to Mr. Brookes. The east window is now being filled in with stained glass, by Messrs. Wailes, of Newcastle, the subject being "Our Lord in Glory." The subject includes a large number of figures. Mr. G. Elliott, of Houghton Hall, has been at the sole expense, and the window is to the memory of his daughter, the late Miss E. Elliott.

Silloth.—A new Congregational chapel has been erected and opened at Silloth, according to the *Carlisle Journal*. The building is a brick erection, situate at the south-east of the town, and is capable of accommodating about 250 persons. The chapel is lighted by eight ground-glass windows. The building cost 550*l*.

STAINED GLASS.

Ludlow Church.—Two stained windows have been put up in the east end of the nave of the parish church of Ludlow. Each window is of two lights, and each contains two subjects, viz., in the one to the left, the call of Peter, "Follow me," and Christ's charge to Peter, "Feed my Lambs;" in the one to the right hand, "The Conversion of Saul," and "Paul before Agrippa." Messrs. Edmundson & Son, of Manchester, were the artists.

Cowfold Church (*Sussex*).—This church has recently been adorned with two memorial windows of stained glass. Of that in the chancel, the subjects are three events in the history of Our Lord immediately after his resurrection, viz., His appearing to Mary in the garden; His being known at Emmaus by the breaking of bread; and the incredulity of St. Thomas. This window is in memory of the late Mrs. White, of Wooldringfold, in this parish. The window in the south aisle is in memory of the late Mr. John Grimshaw, also of this parish. The subject of it is "The Ascension."

St. Martin's, Blue Pitts (*near Rochdale*).—Messrs. Edmundson & Son have just completed and fixed two windows in St. Martin's new church. One is in the nave, and put up chiefly at the expense of the sunday scholars connected with the church, to the memory of Job Sheppherd, late a teacher in the school. The subjects are "The Raising of the Widow's Son," and "Christ's Charge to Peter." In the tracery is an angel bearing scroll, with memorial inscription, and texts at bottom. The other is behind the font, and contains "The Presentation in the Temple," and "Christ Blessing Little Children." In the tracery are "The Crossing of the Red Sea," and "Destruction of Pharaoh's Host," as an emblem of baptism. It is the gift of Mr. Ernest Bates, architect of the church, and brother to the Rev. Joseph Bates, the incumbent.

SCHOOL-BUILDING NEWS.

Notting-hill.—The new national schools in connexion with St. James's, Notting-hill, have been formally opened by the Bishop of London. The schools were for a lengthened period carried on in Kensington Potteries. The new building is capable of accommodating 450 children. The cost, including the site, has been about 2,100*l*. Of this sum 1,480*l*. have been raised by voluntary contributions.

Manningham.—The foundation-stone of new schools, to be built in connexion with Greenfield Independent chapel, Manningham, has been laid. The site of the proposed building is at the south-east side of the chapel, and comprises an area of 290 square yards, exclusive of the playgrounds. The building will be two stories in height, the principal front and entrances facing Lumb-lane, and will be erected in the Early English style of architecture, corresponding with that of the adjoining place of worship. On the groundfloor there will be a meeting-room for members of the congregation, 35 feet by 20 feet; an infants' school, 35 feet by 16 feet; three class-rooms, and separate entrances and staircases for boys and girls. The upper school-room will be 35 feet by 40 feet, 27 feet 6 inches high to the apex of the roof timbers, which will be of an ornamental character, exposed to view, and stained and varnished. Four class-rooms will be formed at one end of this room, being separated from it by means of low partitioning. The room will be lighted partly from above, but chiefly by four triplet lancet windows; and heated, as also the rooms below, by a hot-water apparatus. The schools will accommodate 350 children. The cost, including fittings, will be about 1,000*l*., towards which subscriptions to the amount of 620*l*. have been promised. Messrs. Andrews and Delaunay are the architects, and the following are the contractors:—Masons, Messrs. Bell & Farnish; joiner, Mr. Gill; plasterer, Mr. Kitchenman; plumber, Mr. J. Schofield; slater, Mr. Hill.

Newhall (*Derbyshire*).—New National Schools, for boys, girls, and infants, with two class-rooms and a residence for the master, are about to be erected near the centre of the village, on a new site, which has been given by the Earl of Chesterfield. The architect is Mr. Nicholas Joyce, of Burton-on-Trent and Stafford.

White Colne.—A new day-school is about to be erected at the above place, under the direction of Mr. Henry W. Hayward, of Colchester. Mr. Rogers, of Earl's Colne, is the builder employed.

DAIRY ARRANGEMENTS.

VALUE OF DRYNESS.

LECTURING recently on cheese-making, Professor Voelcker said, as to the arrangements of the dairy,—You will not expect me, of course, to enter into all those minute practical arrangements which every dairy-woman carries out in the mode best adapted for her own comfort. No very general rule can be laid down as to the best practical arrangement, which is generally that which is the handiest; and as some persons are left-handed, and others right-handed, we cannot lay down invariable rules applicable for each. Follow that arrangement which is most handy for you, would be the general advice I would give to every one. But yet there are some points which admit of a philosophical explanation. For instance, the aspect of the dairy should be north, if possible, for this reason, that a north aspect will bring dry and cold air into the dairy, and keep it cool. But it is not merely the low temperature which a dairy that looks towards the north has, that is so beneficial to the keeping of butter and the making of cheese, but also because such dairies are generally drier. And this is a very important consideration; for, after all, it is not so much the high temperature of the dairy that spoils the cheese, and causes it to become sour and hard, as the condition of the atmosphere as regards dryness or dampness. In a damp or wet dairy you generally find a disagreeable smell all through the place; and in such a dairy it is next to impossible to make first-rate cheese. Whereas dairies that are celebrated amongst the dealers for their high qualities of cheese are generally dry: no matter whether it be cool or moderately warm, it is the damp that spoils the cheese more than anything else.

When going through Cheshire, in visiting the celebrated dairy which produced the prize cheese at the time of the Royal Agricultural Society's meeting, at Chester, at Riddeley Hall, a dairy which is presided over in the most admirable manner by Mrs. Willis, I was much struck in finding a perfectly dry room, and the utmost care used to prevent any damp in any shape coming into the dairy. She would not allow any one to bring the milk in. The servants, by a very simple arrangement, poured the milk through a sort of funnel, connected with a tube from the outside, into the cheese vat. They were not allowed to enter with their wet, and, perhaps, dirty boots, but delivered the milk outside the door. Then all the servants were obliged to wear pattens,—a very excellent plan. You never ought to let any one go in with a damp pair of boots on. If by any accident milk was spilt, there was not a pail of water thrown over it to wash it off, but a dry cloth was used. She assured me that she had never done any scrubbing, except when they made no cheese, and then she would not make any cheese for a week or so, until she was perfectly sure the ground was dry again. In other dairies in Gloucestershire and Cheshire, as well as in Derbyshire too, I found invariably a damp floor in dairies, where cheese fetched from 8s. to 10s. per cwt. less than good cheese-makers got for their cheese; and I acquired so much practical experience in this matter (I may say so without presumption), that I could venture to make a very good guess as to what description of cheese is made on a particular farm without seeing the cheese, and even without seeing the dairy: you may blind my eyes and lead me into the dairy, but you must not shut my nose. I will not, of course, say under all circumstances that I should be able to smell the good cheese, but I can smell the bad one; and this bad smell, the sour, peculiar, damp, muffy smell (I don't know whether that term is understood), that musty, damp smell is very characteristic of bad cheese. For it is productive of a peculiar kind of ferment, or taint; and we know how very little of such taint is sufficient to give a bad quality to the cheese. Tainted meat can be produced in a damp cellar, even in cold weather, in a short time; whereas when meat is hung up even at a high temperature in a current of air, it will keep in good condition for a long time. This shows the influence of damp upon cheese. We are then, by all means, to avoid a damp place. Sometimes people are afraid that by building their dairies above ground they get them too warm. But it is clear that it is better to have a warmish place than a damp one. If a damp place must be put up with, I would recommend an increase of temperature, thus keeping it as dry as possible by artificial heat.

LECTURES ON SCULPTURE.

AT the London Institution, Professor Westmacott, R.A., is delivering a course of four lectures on "Sculpture." The first lecture, given on the 5th instant, treated of the distinction to be observed in addressing professional and non-professional audiences; theory and practice; importance of a knowledge of true principles to those who would be judges of art; the great object of sculpture among the ancients; classed as mythological or religious, heroic, commemorative, portrait late; the beautiful; review of the more important ancient schools, and notice of their decline. In the second, given on the 12th, the professor spoke of the total change in the art-impulse of the moderns, and its causes; the dark ages of art, and its revival; religious (Christian) sculpture; change to the pseudo-Classical; with a review of the leading sculptors of Italy from the twelfth to the eighteenth century. The third lecture, to be delivered on the 19th, will treat of ecclesiastical and monumental sculpture, as a special phase of art; its great interest, and its practice in England; promise of excellence—how disappointed; decline of fine art incorrectly attributed to the Reformation; false principles introduced in Italy, and their spread throughout Europe. In the fourth, on Monday, the 26th, he will speak of sculpture in the present century and age; future prospects; principles as yet undefined; sentiment, and high motive; imitation; realism and idealism; artifices to attract attention; ignorance of the public, in matters of taste, the opportunity of pretenders, whether artists or amateurs; the remedy; and then give a general explanation of the practice of sculpture, including modelling, carving, moulding, and casting. The lectures are given extempore, with illustrations; by which means the attention of the audience is kept more fully alive than by the reading of a discourse.

RAILWAY MATTERS.

THE site decided on for the construction of the new railway docks at Milford Haven is upon or near the estuary known as Neyland-hill, at its junction with Milford Haven near to the South Wales Railway Company's station of New Milford, at Burton, in Pembrokeshire, with branch railways thereto, and all the requisite pier, dock, and warehouse accommodation. Powers will be taken to adopt both the broad and narrow gauge. The estimated expenses of the docks is 190,000*l*, and of the railways, 30,000*l*.

A new station is being built by the Midland Railway Company at Peterborough. It is being erected on the site of the Crescent Station. There

is likely to be a good deal of work here next summer. A new college and Independent chapel are to be built, as well as new houses; a great deal of building land having been bought by the Freehold Land Society for building purposes. The Great Northern Company are also going to make considerable alterations; having just bought the estate of Mr. Thomas Hill. Fifty-one lots of building land have been sold. The land is situate in Eastgate, where new houses are likely soon to spring up.

The Blyth and Tyne Railway Company have erected a new station adjoining the Tynemouth-road, North Shields, to the east of the House of Correction. The station, which is a brick building, with stone facings, comprises ladies' first-class waiting-room, and a general waiting-room and booking-office.

The traffic receipts of railways in the United Kingdom amounted for the week ending the 3rd of January, on 10,584 miles, to 483,396*l.*; and for the corresponding week of last year, on 10,193 miles, to 460,796*l.*; showing an increase of 391 miles, and of 22,600*l.* in the receipts. The gross receipts on the fourteen principal railways amounted in the aggregate on 7,268 miles, to 380,942*l.*; and for the corresponding week of 1862, on 7,003 miles, to 364,713*l.*, showing an increase of 260 miles, and of 16,229*l.* in the receipts.

ORNAMENTATION OF WINDOWS BY THE TRANSFER PROCESS OF DIAPHANIE.

IN the year 1857, a French lithographic firm first attempted to print, by new processes in lithography, designs in colours sufficiently solid and transparent for the decoration of glass. More recently they have made many improvements. We have before us one of the first sheets printed, and some of the latest; and the advance is striking.

The original method of using these printed designs was to varnish them thoroughly, and affix them to the glass with gum or other cement. The improvement in the application of these designs consists in permanently fixing the coloured surface to the glass, and then removing the paper upon which they are printed. This is now rendered very easy; and glass thus decorated certainly has a very striking effect, while the cost is comparatively trifling.

The work is so simple that it may be done by any person with ease, although the arrangement of the design for a proposed window requires some taste, and a proficient will always excel. Briefly this is the process:—Make a careful drawing of the proposed decoration on paper, or adopt those which are sold for the purpose; marking out where the subject, border, and grounding join with a double line, say about an eighth of an inch in width; then lay the glass upon the pattern, and cement over the double lines a strip of tin foil previously cut to the proper width. Having finished this the coloured surface of the subject, border, &c., is to be cemented to the glass in the places already marked out by the tin foil, which it should overlap a little. Allow the work to harden for a day or two. The paper is then to be damped and rubbed off with a piece of sponge or flannel: a slight coating of the clearing liquid (which is a thin varnish) is passed over the back of the design, and a coating of very hard copal varnish completes the work. In cases where one sheet fills exactly the window, the tin-foiling may be dispensed with. Messrs. Barnard & Son, of Oxford-street, have published a little sixpenny pamphlet, which contains lithographic plates of the designs alluded to, and may be usefully consulted.

SAFETY FOR MINERS.

THE public mind, painfully excited by the numerous recent cases of explosion in coal-mines, attended with more or less fatal results, has within the last few weeks been again shocked by the account of the dreadful catastrophe at Edmund's Main. The so frequent occurrence of this description of accident proves, beyond dispute, that the present means employed to prevent such disasters is, at the best, of very imperfect effect. Every thinking man sitting by his fireside can hardly fail to remember that while he is reaping every benefit to be derived from the invaluable mineral coal, he does this too often at the price of the very lives of the hardy men who toil in the mines to procure it. Is it necessary that this should be so? I will with deference say that it is not. If I may venture to say so, this coal was stored up for the use of man by the Architect of the Universe. Man has been gifted with reasoning faculties which should enable him to counteract the risks which, without due precaution, must occur in gaining coal. Let us see whether he has taken the steps which seem best calculated to ensure safety.

The present, as it appears to me most primitive and most inefficient method, I will endeavour briefly to describe. Most persons are aware that the only access to a mine is down a narrow well or shaft, sometimes of small depth, and sometimes many hundred feet deep. This well or shaft is divided into two parts by a partitioning of timber, from the top to the bottom. The partitioning is technically called "bratticing," a term now almost as familiar to the general reader as mine or shaft. The various partitions in the workings of the mine are also called by the same name, brattice, or bratticing. I will suppose, merely for simplicity, that there is only one "main" or horizontal layer of coal at the bottom of the shaft. From this point at the bottom of the shaft the layer of coal is worked in all directions, often to a distance of many thousand feet from the shaft. The shaft has to provide for the conveyance of mineral to the surface; of men and horses up and down; to find room for the pumping apparatus; and above all is the sole means of ventilation to a series of workings several hundred feet below the surface of the earth, and extending over many thousand square yards. I only propose here to speak of the all-important service—ventilation. One of the divisions of the shaft before alluded to is called the "main," or "down shaft," the other the "upcast" shaft. The "down" shaft is the medium by which fresh air is conveyed from the surface of the earth: the "upcast" shaft is that which conveys from the mine the gases evolved and the vitiated air. In the upcast shaft, generally at or near the bottom, is placed a large furnace, which, by heating and rarefying the air, causes it to rush up that shaft, air from the mine rushing forward to supply its place. The air to furnish this supply finds its way by the down or main shaft; and is compelled, by appropriate bratticing, to traverse the various workings of the mine, and so to ventilate them. But can it be a matter of surprise, when we consider that in a large mine these workings always extend to very many thousand feet of intricate passages, that the power of the furnace is insufficient to keep up a sufficient draught through the complicated workings? I can only say, for my own part, I should be very much surprised if such an arrangement were found to be effective; and I will proceed to give what I am sure would prove an efficient plan. The cost would not be great; but, should the expense of working a large mine be somewhat greater on the following plan, I contend that the miners have a right to stipulate for the greatest amount of safety that can be secured by any reasonable expenditure. An addition of cost to the price of coal, of 3d. or 4d. per ton, would probably amply cover any such expenditure; and I am certain the public would gladly pay that increase of price upon the understanding that the life of the miner was duly cared for.

The plan I suggest is, to employ the shaft solely as a downcast shaft, and to provide for the upcast draught by artesian borings, as nearly as possible at the extremities of the various workings. It is well known that the expense of a boring, as compared with a shaft, is trifling, and would not be very material in the expenditure of a large mine. But the borings once made, I should not rely upon the furnace system for maintaining a draught; but the borings should be in communication with a vacuum, maintained by power, either exhausting cylinders or discs, as found most desirable. The borings should be lined with cast-iron tubing, unless the nature of the strata should be such as to render that course unnecessary. In very many mines one or two such borings, of 12 inches in diameter, would thoroughly ventilate the mine. It is not at all necessary that the exhaust-chamber should be at or near the top of the borings: communications with a central pumping-station may obviously be made by pipes laid on the surface of the ground. I think that the proposed plan is so simple, and so certain of operation, that I sincerely trust some coal-owner will at once give it a fair trial.

The present bungling and imperfect furnace plan, I contend, must be abandoned for the greatly improved one which modern mechanical science has rendered not only possible, but easy of attainment. This is not a subject I have taken up at a moment's notice, but one which has occasionally occupied my attention for some years; and I trust you will think, with me, that the influential columns of the *Builder* cannot be better occupied than by drawing public attention to a plan calculated most materially to lessen the risk to which the coal-miner is at present exposed.

THOS. A. COTCHETT.

ADULTERATION OF WHITE LEAD.

SIR,—Perhaps many of your readers may not be aware of the extent to which white lead is at present adulterated with barytes,—a very heavy white earth, an oxide of barium. This substance is said to be valuable in the manufacture of fine earthenware; but, in reality, very large quantities are ground in oil, and sold in barrels at about 4*l.* 10s. a ton, as a substitute for, or to mix with, white lead. Some of the painters in Glasgow use it constantly. It is also used by some masons in their putty for joints in ashlar work.

This mineral is extensively wrought at Muirshields, near Lochwinnock, in Renfrewshire; also in the island of Arran. At the former place extensive works are in operation for grinding and bleaching it. The working of this mineral must be a valuable source of revenue to the proprietors, who, of course, cannot help its being put to bad uses. After the paint has been used the adulteration is difficult to detect *at first*, especially in flat tints (that is, when unglazed); but, of course, it *very soon* appears. The presence of barytes in oil paint may be detected by rubbing the paint between the finger and thumb for a little time, when it becomes *granular*; whereas, white lead paint does not. Barytes in place of white lead, and petroleum in place of turpentine, account for low estimates and bad work. By the way, can any of your readers say whether petroleum really discolours light tints, when used in paint instead of turpentine?

DETECTOR.

COTTAGE BUILDINGS AND SANITARY APPLIANCES.

SIR,—At the recent discussion of this subject at the Society of Arts, reported in the *Builder*, Mr. Godwin very justly observed "that if labourers cannot pay such rent as will secure to them a proper home, they are not getting out of the land a proper sustenance and that provision for shelter which they are entitled to receive." Men working on the land are, in many cases, hedged in by the law of settlement to a limited market for their labour; and they are generally men deficient in adaptability of mind and body to take their labour into channels where it would be useful and profitable to others, and consequently more remunerative to themselves; but I cannot agree with the gentlemen who set forth that the labouring classes generally are in this matter powerless to help themselves. There are many thousands of artisans and mechanics earning wages amply sufficient to command suitable and desirable homes. We see large and most magnificent productive establishments, maintained almost wholly by the labouring classes. There are the acres of breweries, the costly spirit palaces: an abundance of capital readily flows to the production of any necessary or luxury for which the labouring population evidence a persistent demand. The mistake appears to be that we are endeavouring to move in this matter without the co-operation of the labouring class. We are repeating the mistake made by Government in introducing sanitary improvements. They sought to force them on the cities and towns before the residents were educated to the want of them; and so excited their strenuous opposition, instead of securing their cordial co-operation.

We are leaving the labouring classes in ignorance on the subject, and endeavouring to prevail on the landlord class to take sanitary improvements to them. What is the consequence? We have not the co-operation of those we are seeking to benefit; and to carry out the matter without their co-operation will be impracticable, however desirable the landlord class may be to accomplish it. They will be over-weighted in the attempt. We cannot estimate the present labouring population of England and Wales at less than thirteen millions. We may estimate their house-rental to be something over one pound per head per annum —say thirteen millions; but half as much again must be paid to cover the interest on the outlay that is required to make their dwellings such as we desire. Instead of an average of five pounds per house, the average must be seven pounds ten shillings per house. The lowest estimate, therefore, we can make of the desired improvements is an annual cost of six millions five hundred thousand pounds. Can we hope that landlords will make this sacrifice for the benefit of the labourers?

It appears to me, Mr. Editor, we must begin at the other end. We must educate the labouring class to a knowledge of the importance to their well-being of light, ventilation, and cleanliness: we must teach them the attendant circumstances that lead to debility and fever: we must awaken in them the desire for health-conducing homes. At present we are endeavouring to call forth a supply of such dwellings artificially. We are seeking to supply the food before the appetite is created. We should create first the desire for homes of this class: from this will grow a demand; and when the labouring class are willing to pay for improved dwellings a rental that will leave a profit to those who supply them, they will not have long to wait for them. At present cottages are let in the country at prices that do not pay for the ground they occupy and the cost of erection. In cities and towns cottage-rental is so irregularly paid, and the damage committed on the property is so continuous and excessive, that the supply has very generally fallen into the hands of needy men, seeking high interest at great risk and great personal trouble.

In my own immediate neighbourhood (Corsham) there are men earning wages ranging from 24s. to 30s. per week, who are content to domicile their families in houses that cost them about 2s. per week; and it is notorious that there are at the present time thousands of mechanics and artisans in this country earning wages ranging from 4s. to 7s. per day, who are content to domicile their families in dwellings which cost them from 2s. to 4s. per week rental, while it is equally notorious that they spend on gin, beer, and tobacco, for their own personal consumption, three times the amount that they devote to secure a dwelling. Wages generally are one-third higher than they were seven years ago. Meat, butter, and cheese, a little dearer; bread and clothes not dearer; neither is more spent on rent. How is the increased rate of wages disposed of? In many cases four days' work instead of six, and more beer. Let us hasten to create amongst them nobler wants; to leave them no longer content with impure air, impure water, badly-cooked food, with a damp, ill-drained, ill-lighted, ill-ventilated dwelling, insuring a debilitated condition of body that will enervate the mind, and beget a craving for stimulants, to purchase which will absorb a large portion of their earnings, leaving the least possible amount for food, clothing, and cleanliness.

There are now many useful publications of which we may avail ourselves in disseminating sanitary truths. One of the most effective of these is the publication you so ably conduct. Beyond this, and to reach a humbler class of labourers, there are household tracts for the people:—"The Worth of fresh Air," "The Use of pure Water," "The Value of good Food," "The Influence of wholesome Drink," "The Value of a well-trained Mind."

When we have taught them the value of sanitary improvements, they will then anxiously desire them: instead of an inert mass which we cannot move, we shall then have three millions of sons of toil ready to co-operate with us.

No emperor has such an army: neither North nor South can command such a phalanx. Effecting it in this way we not only insure the desired result the most certainly, but we shall also elevate the character of the labourer, and prepare him for other desirable efforts. Cultivate first in the labouring classes an appreciation of the benefits, a knowledge of their value, and your humble neighbours will then work out their own improvements more surely, more effectually, and far more beneficially, than we can do for them. With the desire to enjoy, and the capability to pay, the question will become simply one of demand and supply.

JAMES S. RANDELL.

COST OF COTTAGES.

ABSENCE from town has prevented me seeing *The Builder* of last week, in which a letter appeared from Mr. Ross, and in which my name is mentioned.

Not having time to explain as fully as I should wish the motives which instigated me to say what I did at the Society of Arts, I will content myself by stating that I hope very soon to trouble you with some remaks on the subject generally.

In the meantime I may observe that the expressions of satisfaction which have reached me from *builders* of various parts of the country afford confirmation of the justice of those remarks, which were intended to show the prejudicial effect of false estimates in advancing the real object we all have in view, which is the building of healthy cottages in a substantial manner, at a remunerative price, considering all the interests involved.

Perhaps the fact of my having been a competitor the better qualifies me to speak of the deception practised by competitors, and to assert that it is very easy to draw plans and to build cottages at 200*l.* a pair if the architect foregoes his charges, and the builder the legitimate profits of his trade, though it is not impossible that even if these be given up a loss will still result. I fear in such instances the parties interested look to subsequent contracts to recover their position through the fascinating medium of "*extras*" at least such is my experience in the numerous opportunities I have had of judging.

J. BAILEY DENTON.

LODGINGS FOR LABOURING MEN.

SIR,—Model cottages cannot supply the want in or near town. Large houses must therefore be used, and I think the best kind of house would be a double one, containing twelve or sixteen rooms; no basement; two front and two back rooms on a floor. The street door to be in the centre, and the staircase just inside, the space for it (12 feet by 6 feet) to be taken off the front rooms instead of the back. The advantage of this would be—first, a larger staircase without increase of frontage; secondly, larger back rooms for bed-rooms; thirdly, a better chance of escape in case of fire. Large bed-rooms are much wanted: most families want two bedsteads of some kind, and space is wanted for them as well as for health. The back room to be entered from the front one.

Could not such houses as these be built in the route of the Hammersmith and City and West London railways so as to pay a fair interest?

A MECHANIC'S SON.

CASES UNDER THE METROPOLITAN BUILDING ACT.

DIVISION OF WAREHOUSES.

ON the 5th instant, Messrs. Ashby & Horner, builders, appeared before Mr. Alderman Sidney, at the Guildhall justice-room, at the instance of Mr. Edmund Woodthorpe, district surveyor of the northern division of the City of London, to answer complaint that they had executed certain works to the warehouses Nos. 66 and 67, Aldermanbury, and Nos. 4, 5, and 6, Love-lane, belonging to and in the occupation of Messrs. Baggallays, Westall, & Spence, warehousemen, in contravention of the provisions of the Metropolitan Building Act.

Mr. Woodthorpe conducted the case personally. Mr. Raymond, instructed by Mr. Albert Turner, appeared for the defendants. The facts are as follows: Messrs. Baggallays formerly occupied Nos. 4, 5, and 6, Love-lane only; these houses, though exceeding the prescribed limits for warehouse buildings, having been joined under a former Act of Parliament, and previous to Mr. Woodthorpe's appointment as district surveyor. About nine months since, Messrs. Baggallays purchased the adjoining property, Nos. 66 and 67, Aldermanbury, and entered upon the occupation thereof, but without forming a communication with their former premises. Nos. 66 & 67, Aldermanbury had been already joined, but the lower portion of No. 67 was in a different occupation, and had a separate entrance from the street, without being separated from the upper portion by party arches or fire-proof floor, as required by section 27, rules 2 and 3. On the 1st November, 1862, it was discovered that Messrs. Baggallays had had openings formed to connect the whole of the premises without carrying out the provisions of the Act in respect thereto, and hence these proceedings. The facts were admitted, as also that the buildings contained, together, 323,000 cubic feet.

It was argued by Mr. Raymond, the counsel for the defendants, that the several clauses relating to the uniting of buildings, alone referred to new buildings, the 7th section stating that whenever mention is made of any building, it shall, unless the contrary appears from the context, be deemed to imply a new building; and that there was nothing in the 27th and 28th sections to preclude this reading. Moreover, Messrs. Baggallays being the occupiers on both sides of the wall in question, and in which the openings were made, constituted that wall a cross wall within the meaning of the Act; and though it was originally built for a party wall, it being intended that the premises on either side should be occupied by different persons, as soon as the occupation became one, the wall practically and legally became a cross-wall, and so was without the jurisdiction of the Act of Parliament.

Mr. Alderman Sidney said that the question resolved itself into one of fact as to the nature of the wall in question; and having only heard evidence that the wall did not change its character on account of the single occupancy, made an order for the several works enumerated in the notice of irregularity to be carried out forthwith. Mr Raymond took exception to the admission of the evidence, and gave notice of appeal to one of the superior courts.

PATENTS CONNECTED WITH BUILDING.

APPARATUS FOR WARMING APARTMENTS.—*G. Blake.* Dated 13th May, 1862.—In order to present as large a heating surface to the air as possible it is proposed to apply a number of surface plates or partitions *inside* the stove, the air passing through the intervening spaces between such plates or partitions. These stoves may be made of metal, fire-brick, or other suitable material, and the surface plates or partitions may be arranged therein in various ways. The stove may be also so constructed as to derive its heat from steam or hot-water introduced into a space around its exterior.

HOLLOW GLASS WARE.—*A. V. Newton.* A communication. Dated 25th April, 1862.—The nature of the first part of the invention consists in producing a solid wall to a hollow glass lamp bowl, a tumbler, and to other similar pieces of hollow glass ware, with ornaments formed in or on the glass composing the wall at a point intermediate of or between the inner and outer plain surfaces of the wall, by a combination of a pressing and a blowing operation or process. The nature of the second part of the invention consists in the combination of the blowing and pressing processes for the production of glass-lamp pegs and other similar articles, with ornaments on their inner or outer surfaces in a more expeditious and cheap manner than is at present known in the art of glass manufacture. The nature of the third part of the invention consists in a method of producing pressed open-work figures, such as flowers, shelves, and leaves, net-work, and geometrical figures in coloured glass, and uniting the same to various descriptions of glass ware, so as to stand in bas relief. This manufacture combines the pressing and blowing processes, or requires but one or the other of them, according to the character of the article being made, or as the fancy of the operator may dictate.

IMPROVEMENTS IN DRAWING METALS AND IN THE MACHINERY OR APPARATUS EMPLOYED THEREIN.—*L. Christoph, W. Hawcksworth,* and *G. P. Harding.* Dated April 10th, 1862.—This relates to a peculiar system or mode of drawing metals, whether of a tubular, hollow, or solid section, and consists in the application to that purpose of hydrostatic pressure, in lieu of the ordinary mechanical power heretofore adopted. In carrying out this invention the patentees employ a hydrostatic cylinder and ram, the gripper bars being secured to the end of the ram, whilst the draw plates or "wordles" are fitted into a suitable support or flange cast on the cylinder.

IMPROVEMENTS IN THE MANUFACTURE OF PORTLAND CEMENT.—*J. Langston.* Dated April 9th, 1862.—Here the patentee employs, in grinding the materials, only so much water as will make a dough or paste, suitable for being at once dried without the separation of water by settling. The drying apparatus he employs consists of ovens heated by furnaces or fire-bars below, and the flues from these furnaces pass over the top of the ovens in the vaulting of the roof. Ovens so arranged will dry the materials more rapidly than the open floors, and with smaller expenditure of fuel. The passing the materials from the grinding apparatus to the drying ovens without the use of the settling ponds renders it necessary that no lumps should be allowed to escape the grinding apparatus; hence he employs, to effect or to complete the grinding rollers, set at a short distance the one from the other, and between which the materials are caused to pass; or a roller revolving at a short distance from a stationary surface may be employed.

IMPROVEMENTS IN ANGLE IRON APPLICABLE TO METALLIC BEDSTEADS, ROOFS, BRIDGES, AND OTHER SIMILAR PURPOSES.—*E. Peyton and W. F. Batho.* Dated April 14th, 1862.—Here the patentees roll or otherwise manufacture angle iron with corrugations, by which they give it additional strength or stiffness, and are thus enabled to use a lighter bulk of metal than at present, thus combining strength with lightness of material, and giving an improved appearance to the object constructed with it, such as metallic bedsteads, roofs, bridges, and similar constructions.

IMPROVEMENTS IN REVOLVING SHUTTERS AND IN MACHINERY FOR PRODUCING THE SAME.—*J. Bunnett.* Dated April 12, 1862.—These shutters are so constructed that they can also be used as venetian blinds. For this purpose such lath is mounted on a central axis, which moves up and down in the grinding shutter grooves. The upper edges of the laths are connected together by hinged flaps. A portion of the inner side of each shutter-pivot turns on pivots; and when it is desired to use the shutter as a venetian blind, this limb of the groove is turned a quarter round, when the laths are free to turn on their axis, and may be set at any required inclination. The winding pulley for raising and lowering the shutter is fitted with a friction wheel or break, which is brought into action on lowering the shutter, but runs free when the shutter is being wound up. In order to give the required curve to the edges of the shutter laths, a bending machine is used, by which both edges of the lath are simultaneously bent to the proper form by dies acted upon by cranks or eccentrics, actuated by steam or other power.

REVOLVING WINDOW SHUTTERS AND BLINDS.—*A. Clarke.*—These improvements in revolving shutters and blinds consist, first, in the application of flat, coiled, or volute steel tempered springs, combined with a barrel or case revolving upon an axis for the purpose of coiling or rolling up the shutters. The second part of the invention refers to mortising holes through the laths of revolving shutters, to receive tapes or steel strips for connecting them together. The third part relates to the manufacture of sash bars and mouldings and brass stall-board plates.

IMPROVEMENTS IN TUMBLER LOCKS.—*G. Hamilton.*—This invention has for its object the so constructing tumbler locks that the proper positions of the tumblers, for allowing the bolt to be shot, may not be detected by applying pressure

to the bolt in the well-known manner. For this purpose, the patentee mounts the tumblers on an eccentric, the pin of which is carried by the case of the lock. The tumblers are each capable of turning around the eccentric; and when the tumblers are correctly set by the key before the bolt is shut back, the eccentric will not be caused to turn on its pin; but when the bolt is pressed back, before the tumblers are correctly placed, the stump upon the bolt will press against the tumblers and cause them to recede; the eccentric, by turning on its pin, allowing them to do so. The turning of the eccentric on its pin he arranges to bring into action a catch or stop for the bolt to come against; and he also arranges the lock so that the bolt, when further pressed on, shall, by acting on the stop, cause the eccentric still further to turn on its pin, and so move back the tumblers away from the stump on the bolt, in order that the stump shall no longer press against them.

Books Received.

Galvanized Iron and its Application. By A. DEMARTEAU, Architect, and Inspector of the Building Department of the South Austrian Railway Company. 1862. Vienna: Rud. Lechner, Bookseller to the University. London: Trübner & Co.

GALVANIZED or zinced iron is making some progress in Austria, as is shown by M. Demarteau's account of it, chiefly as manufactured at the Galvanizing and Lead Works of Gumpoldskirchen.

On the subject of the introduction of corrugated galvanized sheet-iron into Austria, he says:—

"Although Mr. Moritz Löhr, at present counsellor in the ministry of public works, drew the public attention to the highly important employment of corrugated iron in civil engineering, at a meeting of the Polytechnic Society in Vienna, in the year 1849, on his return from England and America; still this material, corrugated iron, was not to be obtained in Austria; and Messrs Winiwarter's manufactory is up to this time the only one in Austria in which corrugated iron plates are produced. A principal object of the newly-established factory was, to convince the public of the value and durability of galvanized iron sheets; which was the more difficult, as even now, after a period of twelve years, it often occurs, that architects and civil engineers pay no attention to the important difference of the galvanized iron sheets, when compared with zinc sheets, and confound even the names of the two articles.

It seems also to escape notice but too frequently, that zinced sheets are very combustible, and often dangerous to the firemen, from falling sparks during a conflagration; while galvanized iron sheets are perfectly incombustible. Besides, zinced plates are liable to injury from other causes, on account of their softness; while galvanized plates, notwithstanding their lightness and thinness, offer much greater security.

The elongation of zinc in consequence of the increasing temperature must also be taken into consideration; and although wooden laths may be used with advantage, when roofs are covered with zinced sheets, still a similar expedient in the construction of zinc gutters is not possible.

It is well known that, while galvanized iron sheets at an increasing temperature of from 0—80 degrees Reaumure, expand only 1-800th part of the length, zinc sheets at the same temperature expand 1-322nd part of their length and breadth, an elongation which causes injury to the soldered parts of zinc gutters.

In order to prove that galvanized iron sheets are really durable and otherwise suitable material for building purposes, it was necessary to make different trials, and obtain testimonials as to the advantageous application of this article.

Messrs. Winiwarter's endeavours have at last succeeded so far, that the State building authorities in the Austrian provinces now order the application of galvanized iron sheets for the roofs of the larger public buildings.

In the metropolis itself they naturally had greater difficulties to contend with from the competition with other materials and the influence of the agents interested in them."

The treatise is illustrated by engravings, and betokens a thorough knowledge of the subject.

In contrasting tinned iron with the zinced iron, the author remarks that "the covering of tin is a mere mechanical plating on iron sheets and only affords a protection to the iron so long as it remains uninjured; but in the process of galvanisation the zinc unites thoroughly with the iron, and protects it even when the zinc covering becomes injured in any part."

On the application of galvanized corrugated iron plates to the construction of chimneys, he says:—

"Thin galvanized iron sheets have been recommended instead of the thick iron sheets, which are now in use, for the construction of chimneys, the building of which in brick would be attended with great difficulty and expense. Such galvanized chimneys have been made in the form of double tubes: the inner tube is cylindrical, and the outlet for the smoke, whilst the outer tube, made of corrugated iron sheets, is a little conical, and serves as a jacket, inclosing a stratum of air, at least 9 inches thick, which counteracts the considerable cooling observable in all other iron chimneys. Both tubes are firmly connected with one another, giving a stiffness to the chimney which enables it to withstand wind and weather. In Messrs. J. & G. Winiwarter's factory several chimneys of this description have been constructed, from 70 feet to 80 feet high, and an experience of from five to six years shows the best results."

The use of galvanized iron for partition-walls is thus explained:—

"In order to explain the new principle of constructing partition-walls, it must be stated that the galvanized iron is not used in the form of flat sheets, but that for this purpose elliptical pipes, 2½ inches in the oval, and 1 inch broad, are made from the iron sheets, and are then galvanized and put together to any required length, according to the size of the partition. Twisted straw dipped in clay is then bound firmly round the pipes, which are pressed one upon the other, up to the top of the partition-wall, in vertical iron grooves, as will be seen in the figure 22. The partition-wall then receives a coating of common clay on both sides, of a sufficient thickness to form a flat surface, and as soon as this covering is partly dry, it is covered with mortar, and finished off with stucco as in the ceilings of rooms."

Our experience of galvanized iron is as yet but recent, and not wholly satisfactory.

Outlines of Modern Farming. By R. SCOTT BURN, Architect. Vol. I.—Soils, Manures, and Crops. Illustrated. London: Virtue & Co. 1863.

THIS small volume belongs to the rudimentary series for students of agriculture in course of publication by Messrs. Virtue & Co. The author, Mr. Burn, as our readers are aware, has already written several works on agricultural subjects, and is an amateur cultivator of the soil himself. We have no doubt that, notwithstanding his former modest confession of unprofitable amateurship, of which we should be sorry to take advantage in the present instance, this little work will be found to be quite as reliable as such works generally are; although, as he himself remarks in his preface, "agriculture abounds with vexed questions, some of which appear to be as far from settlement as ever, after years of keen and vigorous discussion." Mr. Burn does not affect to settle such questions in this simply rudimentary treatise on soils, manures, and crops. As for the important question of the utilization of town sewage, he proposes hereafter to treat of that, as well as of cottages, and the labour and other questions, and says but little on these subjects in the treatise under notice. Of the little he does say on the town sewage question, we may quote from his present treatise the opinion of an authority as to the dreaded exhaustion of the soil:—

"Duly considering the facts that as much of our town sewage is used directly to the soil; and that as much of it owes its existence to the use of imported corn, which, as it never grew upon, cannot in any way be said to be exhaustive of our soil; and that, moreover, as there is a large field of fertilising substances in the waste products of our manufactures, of the sea, &c.,—Dr. Anderson comes to the conclusion that 'at the present moment we cannot anticipate the exhaustion of the soil;' and that at all events the fact, pregnant as it is with meaning, is patent enough that, 'so far as we at present see, the soil is not becoming exhausted.'"

Specimens of Early French Architecture, selected from the Churches of the Ile de France. By ROBERT J. JOHNSON, M.R.I.B.A. London: 18, Adam-street, Adelphi.

THE last published part of Mr. Johnson's work consists of eight large plates, and includes parts of Rouen Cathedral; Church of St. Leu d'Esserent (half the size would have sufficed for the capitals); Church at Limay (round arched); Notre Dame, Paris; Church of Villars St. Paul (Oise); and choir of St. Germain des Prés, Paris, the modern paintings on the walls being omitted.

VARIORUM.

"Excessive Infant-mortality: How can it be stayed? By M. A. Baines. London: Churchill." This pamphlet contains a paper contributed to the London meeting of the National Social Science Association; and also a short paper reprinted from the *Lancet*, on "Infant Alimentation, or artificial Feeding as a Substitute for Breast-milk, considered in its Physical and Social Aspects." The author agrees with the very general opinion of those who know anything on this latter subject, that "wet-nursing" and "dry-nursing," which so frequently go together, as in cases where a poor woman gives out her own child to dry-nurse while she wet-nurses the child of another woman, are both of them disastrous practices, in a sanitary as well as in a social point of view, and tend not a little to augment the dreadful lists of infant mortality from both extremes of the social scale. The enormous proportion of "still-born" infants he rightly regards as a most suspicious circumstance, and points attention to the remarkable fact that the infant mortality of England far exceeds anything of the kind in any other part of the civilized world. Even China, where infant murder can scarcely be said to be regarded as a crime, ought probably not to be excepted.——"Considerations on the Reform of the Patent Law. By M. A. Soul. London: printed by J. T. Pickburn, Myddelton House, Myddelton-street. 1863." This tract is a reprint from the *Clerkenwell News*, and its author was formerly conductor of the *Artizan*. We may quote his remarks on one important point connected with patents.

"I would now briefly allude to one point, and that is the injury which the public and inventors sustain by persons marking words upon articles, from which it would be supposed that they are the subject of letters patent, when in reality they have either not been thus protected, or the term of protection has expired. By this means a high price is maintained upon the improved contrivance, to the injury of the public; and inventors are oftimes deterred from introducing further improvements therein. It is not generally known that the Merchandise Marks Act of last session (25 and 26 Vict., cap. 88), provides a remedy for this state of things."

Miscellanea.

MOROCCO.—The Emperor of Morocco is having important works executed at Rabat. A new palace is being built, and an old mosque and the tomb of the Emperor, Sid Mohammed-ben-Abdallah, are being repaired. Round the new palace will be erected extensive barracks for the troops of the garrison, and houses for the principal members of the Government. Those works give reason to suppose that the Emperor intends to make Rabat a third imperial residence.

VIOLET DYE FOR WOOD. — A dyer at Lyons has discovered a method by which wood may be dyed violet. This colour is produced by two immersions — one in iodide of potassium, containing 80 grammes of that ingredient per quart; the other in bichloride of mercury, at the rate of 25 grammes the quart. The wood to be dyed is to be placed in the first bath, where it must remain for some hours. It is then to be immersed in the latter, where it will acquire a bright colour. The dyed wood should afterwards be varnished. The baths may be used several times for a similar purpose.

THE LIVERPOOL ACADEMY.—An announcement was recently made that the Liverpool Academy would not again hold an annual exhibition. The connoisseurs and patrons of the fine arts in Liverpool, however, have resolved not only to sustain the Academy intact, but to enable it to extend its usefulness. In a day or two after the announcement that the Academy was *in extremis*, says the local *Journal*, the sum of 500*l.* was subscribed by a few gentlemen to accomplish this end; and one patron of art placed his name on the list for 100*l.* The movement is still going on. The members of the Academy had determined that rather than incur engagements which might compromise them they would abandon for a time their usual exhibition. This indignity to art will now be spared. Before the competition commenced which has exhausted the Academy's balance at its bankers', it had a handsome surplus fund, which the competition has swept away.

THE BURNING OF THE PLYMOUTH THEATRE. A survey of the Plymouth Theatre, Assembly Rooms, and Royal Hotel, has been made by the town surveyor on behalf of the corporation. The damage caused by the fire is estimated at 5,500*l.* Though the entrance, ladies' dressing-room, refreshment-room, and other rooms immediately connected, are all gone, the interior of the theatre remains to a very large extent uninjured, according to the *Western News*. The preservation of the building is to be ascribed to the good genius of Foulston, the architect. He designed an iron roof, which the trial has proved to be capable of bidding defiance to the ravages of a conflagration. It is formed of hoop iron, arranged in a honeycomb form, and of surprising strength. Though the flames were on all sides it stood the test, and was mainly instrumental in stopping the flames from spreading over the other parts. The seats in the gallery were all destroyed, but here again the wrought-iron girders did good service. Mr. Elliott, builder, who had an intimate knowledge respecting the construction of the theatre, knowing these facts, directed the efforts of the enginemen in a manner which very materially helped to save the place from further destruction. The upper and lower boxes were not injured, and the seats which were removed from the latter are nearly as good as ever. Great efforts have been made, and the theatre, we believe, has been opened again.

TEWKESBURY TOWN SURVEYORSHIP. — At a meeting of the local Board of Health for the election of a town surveyor, in the place of Mr. T. Freeman, resigned, three candidates presented themselves; Messrs. G. Howell, T. P. Holder, and F. Thomas. Mr. Howell was elected.

REMOVAL OF NEW PALACE-YARD. — A large number of workmen have been set to work to pull down the two or three remaining houses which stand eastward of the King's Arms Hotel, in Palace-yard, in order to carry out, as far as possible, the new approach to the Houses of Parliament from the end of Westminster-bridge before the commencement of the session.

SANITARY CONDITION OF DUNDEE. — At a recent meeting of the local police commissioners, the reports by the sub-committee of the sanitary committee were read. They revealed a state of matters requiring instant attention throughout the whole town, such as the filthy condition of closes, pends, lanes, streets, and common stairs; the want of public halting-places and other conveniences; the foulness of drains, &c. After some discussion, in course of which it was admitted by various members of the commission that Dundee was one of the dirtiest towns in Scotland, though so situate as to be capable of being made one of the cleanest; the reports were referred back to the sanitary committee to carry out the recommendations as expeditiously as possible.

METROPOLITAN BENEFIT SOCIETIES' ASYLUM. The inmates of this institution in the Ball's Pond-road were recently regaled with the annual dinner there. Mr. Morrell presided, and the committee, wives, and friends attended, all heartily enjoying themselves and partaking of tea. The committee having arranged, with praiseworthy liberality, for a series of free lectures on Wednesday evenings in the chapel, the Rev. Mr. Pilkington, of St. Jude's Chelsea, gave the first on the 7th instant, with magic-lantern views, on Egypt and the Holy Land, to a crowded audience. The next lecture was by the Rev. Mr. Hunt, of Christ Church, Hoxton, upon Bernard Palissy, the Huguenot potter; and the third (on the 21st instant) will be on "An Excursion on the Continent," by the Rev. W. Holmes.

MANCHESTER SELF SUPPORTING COOKING DEPÔT. This institution, in Ancoats, is in the centre of a populous district inhabited almost entirely by the working class, and was opened on Saturday, the 3rd instant. The objects of the institution are stated on a board in the dining-hall to be "the supplying of well-cooked and wholesome food both to persons in the hall, and also at their own homes. The defective cooking in cottages and the absence of suitable places for men to dine in who are employed at a distance from their homes, have suggested this establishment." The arrangements comprise a dining-hall for men, and another for women; a counter at which food is sold for home consumption; store-rooms for materials, and modern and complete cooking apparatus. The prices and general plan are those of Mr. Corbett, of Glasgow, the tariff ranging from a penny to twopence. The Rev. Canon Richson, M.A., and others, have promoted this desirable aid to the operatives. Other institutions of a similar character are in beneficial operation in other parts of Manchester, established by Mr. John Pender, M.P.; by Mr. Birley; by Mrs. Eadson Wilkinson; by Mr. Clarke; and by Miss Hilton.

MONUMENTAL.—Mr. Marshall Wood has received a commission to execute a colossal marble bust of the Prince of Wales, to be placed in the Townhall, Manchester, and for which his Royal Highness has granted Mr. Wood the necessary sittings.——A statue to the late Lord Cockburn, the eminent Scotch barrister and judge, has just been placed in the Parliament House, Edinburgh. The statue, which is erected by subscription, is from the chisel of Mr. W. B. Brodie, R.S.A. It is a full-length figure, in the robe of Solicitor-General. The figure is placed a little to the right of Roubilliac's famous statue of Lord President Forbes. The old Parliament House of Scotland (which has been since the Union an adjunct to the law courts) has now a series of seven statues, those of Lord Jeffrey and Lord President Boyle, by Steell, being (excepting Cockburn) the latest additions.——Mr. Steell's model of the statue of Sir David Baxter, bart., which is to be erected in the Pavilion of the Baxter-park, at Dundee, although not quite completed, is sufficiently advanced to give an idea of the artistic design. Sir David is represented standing with a plan of the park in his hands, as if in the act of presenting it to the town. The costume is that of our own time, with just sufficient drapery to give the requisite strength.

HOTEL PROFITS.—It has been stated in more than one quarter that the Great Western Hotel, Paddington, will this year pay to the shareholders the enormous dividend of 45 per cent. If this be the case, it is quite time the prices were lowered there.

BAVARIAN PENCILS.—A letter from Nuremburg, in Bavaria, says:—"Our pencils have obtained the first prize at the Exhibition of London No branch of industry in our city has taken such an extension as this manufacture. We possess about twenty large factories, employing about 5,000 workmen, who produce annually 216 millions of pencils, representing a value of three millions of florins (6,400,000fr.)."—*Galignani.*

ACCIDENTS.—A house has fallen in at Beaumont-place, Euston-road. It had been in a dangerous state for some time. Several labourers were set to work to remove the *débris*, and it was discovered that fortunately no lives were lost. Orders were immediately given for an adjoining house to be pulled down, as it appeared in a very tottering state.——The remarkable escape of a workman is reported from Blackburn. He slipped from the roof of a house, where he had been at work, and fell a height of 22 feet. Fortunately, his foot caught a projection from the window and saved his fall, the worst consequences of it being a broken arm.

SOCIETY FOR THE ENCOURAGEMENT OF THE FINE ARTS.—The fifth session of this society was inaugurated last week with a *conversazione* at the rooms of the Arundel Society, in Old Bond-street. The attendance was numerous. In addition to the works of early Italian art, published by the Arundel Society, the walls displayed several of the works by water-colour painters produced in aid of the Lancashire Relief Fund, and of Bedford's photographs, taken during the Prince of Wales's tour in the East. The report of the council gave a satisfactory account of the condition of the society. The members now nearly numbered 350, and the financial statement showed a surplus to begin the year. The proceedings of the evening were enlivened by a miscellaneous musical performance.

KILKENNY ARCHÆOLOGICAL SOCIETY. — The annual meeting of this active and thriving Society was held on the 7th inst., the Very Rev. the Dean of Ossory, president of the Society, in the chair; when eight new members were elected; and the report of the committee for the past year was read by the Rev. James Graves, the honorary secretary and treasurer. The report noticed the fact, that from 1849 to 1862 inclusive, no fewer than 1,401 members had been elected. Of this number, however, 749 had "fallen away, having resigned, died, or become hopeless defaulters," and of the last and not quite reputable order of quasi members some complaint of "laziness" in meeting their very small archæological liabilities is made in the report. Various presentations were made at the meeting, and objects of interest reported on or described.

GLASGOW ARCHÆOLOGICAL SOCIETY.—The usual monthly meeting of this society was held on Monday, the 5th instant, Mr. Sheriff Strathern, V.P., presiding, when the following papers were read:—I. "Note on the Discovery of a Vitrified Fort at Portencross, Ayrshire," by Mr. William Keddie. II. "On Excavations among the Stone Circles on the Island of Arran," by Dr. Bryce. III. "Historical Notes on the Modes of Ancient Interment," by Dr. Scoular. Dr. Bryce exhibited a skull, an urn, and numerous flint arrow heads, found in the course of his excavations. His discoveries seemed to demonstrate that, whatever else these monuments may have been intended for, they were undoubtedly used as places of sepulture, the dispositions of the stones having always, apparently, reference to a cist in the centre of the circle.

ELECTRO-TELEGRAPHIC ORGANIZATION IN FRANCE FOR POLITICAL PURPOSES.—On the 14th ult. the first essays of the great system of telegraphic organization, conceived by M. de Vougy, director of telegraphs, were to be put in execution all over the French empire. Henceforward each sous-prefecture will deposit its despatches in the chief town of the department, or will correspond with any of the sous-prefectures through the medium of the prefecture. Thus it is arranged that each prefecture will be put in direct communication with the neighbouring prefectures and with Paris; or, where the telegraphic wires are extended to great distances, with the principal towns of France, and as far as the very frontiers. When the group will be completely terminated, each chief town of a canton will communicate with its chief town of arrondissement or chief town of prefecture by the intermediary of the sous-prefecture.

CHRISTCHURCH ARCHÆOLOGICAL SOCIETY.—The annual meeting of the Christchurch Association was held at the town-hall, on Wednesday, 7th. After electing several new members, the hon. secretary (the Rev. Mackenzie Walcott) read a paper on Romsey Abbey. A paper sent by Mr. B. Ferrey, architect, was also read to the meeting.

ARSENICAL PAPER-HANGINGS.—A Warrington correspondent, who signs his communication "S. Chandley," protests against the total disuse of arsenical green in paper-hangings. He admits that exceptional cases have occurred, as where children have torn off and eaten such papers; but doubts the truthfulness and discretion of sensational alarms as to alleged fatalities attendant on the mere sleeping or living in rooms containing such papers, which fatalities seem to him inconsistent with the fact that paperhangers engaged in putting them on, and rubbing them over all day long, do not appear to suffer from such floating atoms of arsenic in the atmosphere as are imagined and dreaded. For our own part, we so far agree with our correspondent in thinking that it is just possible the alarm has gone too far in regard to the evil effects of breathing an atmosphere where arsenical colours are present in a room; but that serious evils have been proved to have arisen from the use of such colours there can be no doubt. Our correspondent remarks, in conclusion, that it is only necessary to "avoid bright loose greens, as all others contain comparatively little arsenic, or none at all; and if they did, being satin or glazed, no arsenic could escape in sufficient quantities to injure the most sensitive or delicately constituted among us." A new colour as a substitute for arsenic was lately spoken of.

TENDERS.

For the erection of four Slaughter-houses, and one boiler-house, for the Ruath Local Board of Health, Cardiff. Mr. John Williams, Surveyor to the Board, Architect:—

INTERNATIONAL EXHIBITION.

A sample of the Forty-Guinea Village Turret Clock may be seen in action and striking, with dial and bell complete. Also a sample Turret Clock, from Fifteen to Twenty Guineas, suitable for school or stable, in Class 15, No. 3,248.

JOSEPH FAIRER,
Turret Clockmaker to Her Majesty's War Department,
188, St. George street East, London.

BRYCESON'S ORGAN FACTORY, BROOK STREET, EUSTON ROAD, LONDON, N.W. Established 1796.—Apply for PRICED CATALOGUE of St. Cecilia, Sandemore, and other Organs usually in Stock. Also as to the Tuning, &c. of Organs in all parts of the country. Church Organs of any size built, enlarged, or remodelled, as well as removed and WAREHOUSED DURING RESTORATIONS. PRIZE MEDAL, 1851.

TO CHURCHWARDENS, MILL PROPRIETORS, and OTHERS.—GEORGE FRITH, BUILDER, &c. Coventry, begs respectfully to call the attention of the above parties to his method of REPAIRING CHURCH SPIRES, CHIMNEY-SHAFTS, and other elevated structures, without the expense of lading or scaffolding. Church spires taken down and rebuilt, pointed, repaired, &c. Chimney shafts repaired, pointed, and new capped. New vanes and all kinds of lightning conductors applied. Estimates given. References from architects, engineers, &c. Circulars illustrating the principle and containing testimonials sent free on application as above.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter FROM SIR RAYMOND JARVIS, Bart. VENTNOR, ISLE OF WIGHT.—Second Testimonial.—"March 10th, 1858.—In reply to your letter received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state that it has answered perfectly. Many others and the pumps have been repaired, and there is not the least particle decay on the tubing down, now seven years, and you are at liberty to refer to me. Yours truly, Raymond Jarvis."

N.B. From the above it will be seen that the CORROSIVE WATER of the Isle of WIGHT has no effect on Gutta Percha Tubing.

THE GUTTA PERCHA COMPANY, PATENTEES,
18, WHARF ROAD, CITY ROAD, LONDON.

Pepper, entitled "A Strange Journey," in which the "Pre-Raphaelite," by Mr. Rose, of Glasgow, and the Illustration of Mr. Charles Dickens's "Haunted Man" (using an optical illusion devised by Mr. Dircks), will be introduced. Entertainment by Mr. Bevon. Mr. Matthews's new repertory of conjuring curiosities. Mr. King's Lectures. The Giant Xmas Tree. Fourth Juvenile Day, and grand, free distribution of Ornaments, Toys, &c. on Thursday morning and evening, the 22nd January.

BARTLETT, BROTHERS, & CO.
DEVONSHIRE WHARF, CAMDEN TOWN, N.W.
Manufacturers of Silicates of Soda and Potash, Aluminates of Soda and Potash,
PATENT INDURATING SOLUTIONS,
For the Preservation of Stone, Cement, &c.;
PATENT SILICEOUS PAINT, FOR COATING STONE, CEMENT, STUCCO, &C.
Specimens of the Silicates and Aluminates, and of their applications, may be seen at the CONSTRUCTIONAL DEPARTMENT, SOUTH KENSINGTON MUSEUM.

HUBBUCK'S PATENT WHITE ZINC PAINT.
By the process, which is patented, Pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London atmosphere

ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Barytes from ten to thirty per cent. Whether under the name of "Improved Zinc Paint," or in the name of Twenty Other Qualities, no workman can produce good work with such heads of. Workmen who have consumed the Patent Zinc Paint say, they never will use any other Paint for their own work.

CHEAPNESS.—Not only is the paint per unit bulk weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.

EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK & SON,
WHITE LEAD, OIL, PAINT, AND VARNISH WORKS, 24, LIME STREET, LONDON.

DEVAUX'S VIEILLE MONTAGNE
THICK ROOFING ZINC.
This invaluable metal, if laid by Mr. TYLER on the new principle introduced by J. EDMISTON, Esq. F.I.B.A. will last as long as lead, at one-third the cost.

For Prospectuses, Samples, Models, and Estimates of Works to be done with the Roofing Zinc, in large or small quantities, in Town or Country, apply to

Mr. J. W. TYLER, 4, WOOD-STREET, WESTMINSTER, S.W.

If the Metal is laid by Mr. TYLER, who has become so well known among Architects and Builders, superior and careful workmanship may be depended upon, and a guarantee given for its durability, if the woodwork is prepared according to directions given.

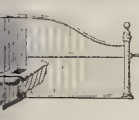
Priced Lists on application.



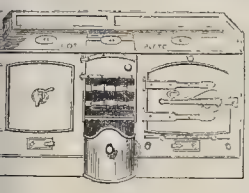
ESTABLISHED 1846.

Bell-hanging, Railings, and Balconies.

PRIZE MEDAL.—INTERNATIONAL EXHIBITION.

MUSGRAVE'S PATENT STABLE FITTINGS and HARMLESS LOOSE BOXES
MUSGRAVE'S PATENT IRON COW HOUSE FITTINGS and IRON PIGGERIES. These Inventions are confidently recommended as possessing those advantages not to be found in anything hitherto made.

At the late meeting of the Royal Agricultural Society at Leeds, MUSGRAVE, BROS. received a SILVER MEDAL and two awards of "highly commended" being the only prizes conferred on any competitor in this class.



MUSGRAVE'S PATENT SLOW COMBUSTION STOVE. This Stove is the nearest approach to Warming by Hot Water, and an excellent Aid to Ventilation.

It will burn in Churches from Saturday till Sunday Evening, without attention during the hours of worship. It also will burn day and night for weeks, with little care. Capable of warming a large apartment for twenty-four hours at a cost of Threepence; and deserving of special attention, because of its safety, healthfulness, durability, and extreme simplicity.

Full particulars will be sent on application to the Inventors and Makers

MUSGRAVE, BROTHERS, Ann-street Ironworks, Belfast.

THE LEAMINGTON PRIZE KITCHENER.

These Ranges are strongly recommended for Economy, Cleanliness, and a Cure for Smoky Chimneys.

The Top forms an entire and efficient Hot Plate, and having an Open Fire, removes all the objections of a Close Fire-range.

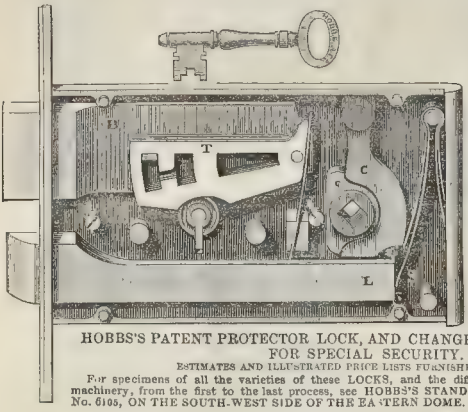
When ordering the above, send FINISHED THICKNESS of Shutters, and the way they go up.
Sold by all Ironmongers, and the Inventor,
GEORGE JENNINGS,
Sanitary and Engineering Depôt, Holland street, Blackfriars-road.

PATENTED HOT AIR APPARATUS in CAST IRON, consisting of prismatic tubes, to be applied to chimney walls, flues and heat-conduits. By this system is obtained health, durability, a clear fire, security, economy.—An apparatus in use can be seen, every day, at the Office of M. LEWAL, Nos. 5 and 6, Philpot-lane, City.



INTERNATIONAL EXHIBITION, 1862.—CLASS 31, LOCKS, &c. No. 6105.

HOBBS'S CELEBRATED MACHINE-MADE LEVER LOCKS,

Suited for all purposes, at Prices that silence competition.

SUITES OF LOCKS FOR MANSIONS, WAREHOUSES, AND OTHER LARGE STRUCTURES, WITH OR WITHOUT MASTER KEYS.

PUBLIC BUILDINGS OF EVERY KIND FITTED.

The parts in the Plate marked F and C show the form of Hobbs's Patent Frictionless Follower and Crank, by which a rolling instead of a rubbing motion is produced, thereby preventing friction.

S, s, shows the double spring, by which means the Latch is allowed to work independent of the Crank in shutting the door, thereby avoiding the necessity of slamming; at the same time sufficient strength is given by the Follower Spring to throw the heaviest knobs or handles.

HOBBS' PATENT FRICTIONLESS FOLLOWER, & DOUBLE SPRING FOUR-LEVER MORTISE LOCK, Price 8s.

FIREPROOF SAFES, IRON DOORS, CASH BOXES, &c.

HOBBS'S PATENT PROTECTOR LOCK, AND CHANGEABLE KEY BANK LOCK FOR SPECIAL SECURITY.

ESTIMATES AND ILLUSTRATED PRICE LISTS FURNISHED ON APPLICATION.

For specimens of all the varieties of these LOCKS, and the different stages of manufacture by machinery, from the first to the last process, see HOBBS'S STAND in the EXHIBITION, CLASS 13, No. 6105, ON THE SOUTH-WEST SIDE OF THE EASTERN DOME.

DAY and GAS-LIGHT REFLECTOR

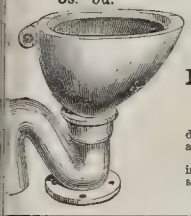
MANUFACTURER.—THOMAS FOX, 20, Hatton Garden, E.C.

These Reflectors never tarnish, require no cleaning, and are the most effective and durable yet presented to the public. All kinds of Best Glass Silvered.

N.B.—The usual discount to builders and the trade.

SASH WEIGHTS, 5s. per cwt. at Ashton Wharf, Blackwall, and at Hope Wharf, near the Church, Rotherhithe.

The ABOVE INVENTION WILL RECOMMEND ITSELF to Architects, Engineers, and others interested in Drainage, for its SIMPLICITY construction; there being NO COMPLICATION OF PARTS.
The "Manhole" is sufficiently large to admit of the DRAIN being THOROUGHLY CLEANSED WITHOUT A SINGLE PIPE BEING MOVED.
It DOES NOT at all INTERFERE WITH THE FLOW OF WATER in the Drain.
It IN NOWISE WEAKENS THE PIPE; and
It ADMITS of the ready INSERTION OF A JUNCTION by removing the "Manhole" cover, and replacing it with a loose Junction Arm.



Manufactured solely by

JOSEPH CLIFF & SON, WORTLEY, near LEEDS;

For MARCUS BOURNE NEWTON,

WHARF, No. 4, INSIDE GREAT NORTHERN GOODS STATION, KING'S CROSS, LONDON, N.

3s. 9d.

PLASTER OF PARIS.—The only London maker, the best and the oldest established (1830), is ROBESON, Mount Pleasant, Gray's Inn-road. The cheap country-made articles is bought and sold by nearly all the dealers, agents, and pretending manufacturers, careless as to quality. Superfine and fine Plaster unequalled.

TWO MEDALS IN CLASSES 1 AND 10, INTERNATIONAL EXHIBITION
THE LIZARD SERPENTINE COMPANY, LIMITED
Works—CARLEON COVE, LIZARD, CORNWALL.
Offices—24, ST. JAMES'S STREET, LONDON, S.W.

The works having been suspended for a considerable time in consequence of the death of the late proprietor, the Lizard Serpentine Company desire to inform Architects, Builders, and the public generally, that having entirely re-built the factory, and fitted it with the most improved machinery, they have now resumed operations, and will be happy to furnish estimates, and execute in the best manner any work intrusted to them.

Communications to be addressed to the SECRETARY, No. 24, St. James's-street; or to Mr. THOMAS OARDEN, 94, King-street, Manchester, who is sole agent for Liverpool and Manchester.

LITTLE CASTERTON FREESTONE. Apply for prices, &c. to OCTAVIUS N. SIMPSON, STAMFORD; and see Specimens at the Office of Messrs. PINDER SIMPSON & SONS, 29, Savile-row, London, and at the Museum of Practical Geology, Jermyn street, W.

This stone (which is a perfect oolite), is made in blocks of any portable size, and is about four feet thick in the bed. It will stand ANY WEATHER, is much used for water-works, and for the building and restoration of many churches. With good workmanship it is not necessary to place it bed-wise. It works freely with a tooth saw, and is wrought at a cheaper rate than any stone in the kingdom.

GRANITE.—The Cheesewring Granite Company, Limited, Liskeard, Cornwall

SALES BY AUCTION.

In re the Patent Bituminized Pipe Company (Limited).—Costly Plant, Machinery, and Stock in Trade, Old Ford.

MESSRS. FULLER & HORSEY are instructed by the Official Liquidator to SELL by AUCTION, on THURSDAY, JANUARY 22nd, and following day at EIGHT o'clock each day, in all, without reserve upon the PREMISES, Old FORD, Bow (unless an acceptable offer for the whole be previously made by private contract), the costly PLANT and MACHINERY used for the manufacture of patent bituminized pipes, fitted with the Bateman's apparatus, principally by Horn, of Whitechapel, including four patchways, one double and three single, for making pipes up to 2 inches up to 2 feet 6 inches diameter, 220 turned iron pipe mandrils, 6 wrought-iron jib cranes, 2 crabs, 2 wrought-iron bituminating open steel troughs in brickwork, 3 capital 14-inch pressing screw engines, of 16-inch power, wrought-iron Cornish steam boiler, 27 feet turned, bright, wrought-iron shafting, 50 riggers, 1,000 feet leather belting, 3 flanch pieces and 1 cast-iron pipe, 2 pumps, cisterns, portable crane on wheels, a capital fire-engine and 1 hose by "Amor," racks, drying stove, smiths' tools, stores of various descriptions, bar, rod, and hoop iron, nails, rope, twine, galvanized iron roofing, hinges, 3 cwt. soda, fire, limestone, block lead, 6 tons powdered glass, cast-iron couplings, 8 tons brown paper, 10,000 inch patent bituminized pipes, from 2 to 15 inches diameter, 1,300 sc. weighing machines, scales and weights, trucks, and numerous other effects.—To be viewed two days prior to the sale, when detailed catalogues may be had on the Premises, of R. W. EDWARDS, Esq. 22, Basinghall street, E.C.; of Messrs. LAWRANCE, PLEWS, & BOYER, Solicitors, 14, Old Jewry Chambers, E.C.; and of Messrs. FULLER & HORSEY, 13, Billiter-street, E.C.

In re the Patent Bituminized Pipe Company (Limited).—Spacious Leasehold Manufactory, Warehouse, and Wharf.

MESSRS. FULLER & HORSEY are instructed by the Official Liquidator to SELL by AUCTION, on THURSDAY, JANUARY 22nd, at ELEVEN, on the PREMISES (unless an acceptable offer previously made by private contract), the eligible MANUFACTURING PREMISES occupied as the works of the Company, at Old Ford, Bow, within a short distance of the Bow station of the North London Railway. The site is rather more than two acres, and there is a frontage of 500 feet next the Lea Cut; also a gateway entrance from a private road leading from Stratford-le-Bow. The buildings have been recently erected within the last few years, and are very substantial: they comprise a range of large and lofty ground floor manufactories, measuring about 100 feet by 32 feet, 80 feet by 60 feet, and 45 feet by 36 feet; steam-engine house and boiler house, with two lofty chimney shafts, detached brick building used as a laboratory, smiths' shop, warehouse, stores, and clerks' office, forewoman's cottage, and large yards: held on lease for an unexpired term of 19 years, at the very low rent of 100l. per annum.—To be viewed till the sale. Printed particulars may shortly be had of the Premises; of R. W. EDWARDS, Esq. 22, Basinghall-street, E.C.; of Messrs LAWRANCE, PLEWS, & BOYER, Solicitors, 14, Old Jewry-chambers, E.C.; and of Messrs. FULLER & HORSEY, 13, Billiter-street, E.C.

In re the Patent Bituminized Pipe Company (Limited).—The valuable Patents.

MESSRS. FULLER & HORSEY are instructed by the official liquidator to SELL by AUCTION, on THURSDAY JANUARY 22nd, 1863, at ELEVEN o'clock, on the PREMISES, Old Ford, Bow, (unless an acceptable offer be previously made by private contract), the valuable PATENTS for Great Britain and Ireland, the Channel Islands, and the Isle of Man, also for France, Belgium, and the Colony of Cape of Good Hope, granted to Mr. Charles Newbold for IMPROVEMENTS in MACHINERY or APPARATUS for and the Method of Manufacturing Vessels, Tubes, Pipes, Vases, and other articles in Bituminized Paper or Textile Materials used for manufacturing paper, &c. Specifical ons of the Patents may be seen on application to Messrs. LAWRANCE, PLEWS, & BOYER, Solicitors, 14, Old Jewry Chambers, E.C. of whom also printed particulars may be had. Particulars may also be had of R. W. EDWARDS, Esq. 22, Basinghall-street, E.C.; and of Messrs. FULLER & HORSEY, 13, Billiter-street, London, E.C.

150 Tons Best Scrap, Rod, and Bar Iron.

MESSRS. FULLER & HORSEY are instructed to SELL by AUCTION, on WEDNESDAY, FEBRUARY 11, 1863, at ELEVEN for TWELVE o'clock, at the SWALWELL IRON WORKS, near Newcastle-upon-Tyne, in Lots, 150 Tons BEST SCRAP, ROD, and BAR IRON, assorted sizes, manufactured by Crosley, Mellington, & Co now lying at the Swalwell Works. To be viewed at the Works on the morning of the Sale. Cards to be had and Steamers at the Station Hotel Newcastle, or at the "Millfield Counties Herald" Office, Bramham; of Messrs. VANDERCOM, CREE, & LAW, Solicitors, Bush lane, London, E.C.; of Messrs. CHARLES CLAW & ROBB, Accountants, No. 13, Basinghall-street, E.C.; and of Messrs. FULLER & HORSEY, 13, Billiter street, London, E.C. Approved bills at three months' date will be taken from purchasers to the extent of 50l. and upwards. There is every facility for removing the iron by water carriage.

Thornton and others to SELL by AUCTION, on the PREMISES, on FRIDAY, JANUARY 23 at TWO for THREE precisely, the STEAM BOAT PIER; consisting of three dummies, a barge covered with stout platform, two bridges 40 feet long, a new bridge 30 feet long, two shorter ditto, three brows, iron pump, a large clock with two dial plates, bell, mooring, and other chains, standards, &c.—May be viewed and catalogues had at the pier, and of PULLEN, HORNE, & EVERSFIELD, 40, Parliament-street, Westminster, and 80, Fore-street, City, E.C.

IN BANKRUPTCY.—NOTTING HILL (for ABSOLUTE SALE).—To BUILDERS, CAPITALISTS, and others.—EIGHT substantial brick built CARCASSES, estimated to produce, when completed, 1,200l. per annum; also BUILDING GROUND (adjoining) eligibly situate for the erection of two RESIDENCES.

MR. W. B. BAKER is instructed by the Assignee to SELL by AUCTION, at the MART, opposite the Bank of England, on TUESDAY NEXT, JANUARY 20th, 1863, in Six Lots, EIGHT valuable CARCASSES, in different stages of completion, and affording a first-rate opportunity for Builders and others. The property is well situate, fronting a clear site, and has the right of early extensive pleasure grounds in the rear, and from the contiguity of the site in the Metropolitan and City Junction Railway cannot fail to command first-class tenants at remunerative rentals; and when completed is estimated to produce 1,200l. per annum. Also BUILDING GROUND adjoining, admirably adapted for Hotel, Club, or Two Residences. May be viewed, and particulars with conditions of sale obtained of Messrs. LAWRENCE, PLEWS, & BOYER, Solicitors, 14, Old Jewry-chambers, E.C.; of THOMAS POCOCK, Esq. Solicitor, 58, Bartholomew-close, E.C.; of ALEXANDER REMSLEY, Esq., Solicitor, 7, All-ay-court-yard, Poultry, W.; at the Mart; and at the Auctioneer's Offices, 9, Queen's terrace, Queen's road, Bayswater, W.

IN BANKRUPTCY.—By order of the Assignees.—Bayswater.—A most valuable LEASEHOLD ESTATE, eligible alike for investment or occupation, held direct from the Free holder, at moderate ground rents, and of a rising, growing, and very valuable character.

MR. W. B. BAKER, will SELL by AUCTION, at the MART opposite the Bank of England, on TUESDAY NEXT, JANUARY 20th, 1863 at TWELVE for ONE precisely, in six lots, two desirable brick-built FAMILY RESIDENCES, Nos 1 & 2, Colville-square, near All Saints' Church, Westbourne-grove West, Bayswater, of the value of 240l. per annum, and Nos. 4, 5, 6, 7, and 8, Colville-square, adjoining, requiring a small outlay to complete same, and of equal value to Nos. 1 & 2. The property is situate in the best and rapidly improving locality, a short distance from the Freeholder for 78 years, at a moderate ground rent, and when completed will be a sound 900l. per annum. May be viewed by cards to be obtained of the Auctioneer, and particulars with conditions of sale had of Messrs. LAURANCE, PLEWS, & BOYER, Solicitors, 14, Old Jewry Chambers, E.C.; of Messrs. VALLENCE & VALLENCE, Solicitors, 20, Essex-street, Strand, W.C.; Messrs. COMBE & WAINWRIGHT, Solicitors, Staple Inn, Holborn, W.C.; Messrs. SMITH & WALL, Solicitors, 5, New Inn, Strand, W.C.; at the Mart; and at the Auctioneer's Offices, 9, Queen's terrace, Queen's road, Bayswater, W

To Timber Merchants, Coach builders, Wheelwrights, Builders, and Others.—Adjoining the Railway-arches of the South-Western Railway, Lambeth road, the Premises being required.

MESSRS. F. HALL & SON will SELL by AUCTION, on MONDAY, JANUARY 19th, 1863, at TWELVE, on the PREMISES, near the East Lambeth-road, and close to the new Lambeth Bridge, the entire STOCK of a TIMBER MERCHANT: comprising about 8 loads of clean sab planks, from 1¼ inch to 4 inch, 6 loads of capital sound oak planks, 5 loads of Spanish and Honduras mahogany planks and beads, 4 loads of deal spruce planks, 1,000 feet of linetree planks, 15 ash cart-beds, 2 large flat butchers' blocks, 300 yellow deals, 500 dry white ditto, cut and uncut, 5,000 feet of long yellow pine boards, also 1 log of mahogany, and other useful effects.—May be viewed, and catalogues had on the Premises; at the Sir Sidney Smith, Chester street, Kennington; and of the Auctioneers, 1, Thurlow-terrace, Wandsworth-road, S

TEDDINGTON, Middlesex.—TO BE LET or SOLD, the Remaining Portion of a BUILDING ESTATE in this favourite locality, with frontages on main roads overlooking Bushy Park, five minutes' walk from the Station on the new Kingsbury from Waterloo. 13 Kingsbuilt villas have been let up this spring, and will in half an hour of the City and Claimcross. The land stands high and dry, possesses a good gravelly soil, is beautifully timbered, and has the rare facility of Two Canal and Hampton Court, Richmond, and the Thames, so all that can be desired for the erection of first-class residences, which are in great demand. Advances made to responsible builders, or two thirds of the purchase money of freehold may remain on mortgage at 4½ per cent. A plan of the estate may be seen and further particulars obtained at the Office of the Architects, Messrs. LAWS & DENNISON, 12, Doughty-street, Mecklenburgh square.

FREEHOLD BUILDING GROUND, City of London.—The Commissioners of Sewers of the City of London will meet in the GUILDHALL of the said city on TUESDAY, the 3rd of MARCH next, at TWELVE o'clock at noon precisely, to receive PROPOSALS for TAKING, under a Lease for Ninety Years, certain PLOTS of FREEHOLD GROUND situate in Angel-alley, Bishopsgate. Further particulars, with plans and printed forms of proposal, may be had at the Office of the Solicitor to the City, of the ground may also be seen. The Commissioners do not bind themselves to accept any proposal unless deemed satisfactory. Persons making proposals must attend personally, or by a duly authorised agent, on the above-named day; and the parties whose offers are accepted will be required to execute an agreement and bond at the time. No Tender will be received after TWELVE o'clock on the said day of treaty. JOSEPH DAW, Principal Clerk.

Sewers' Office, Guildhall, 12th January, 1863.

LAND.—WANTED TO PURCHASE, about FORTY ACRES of LAND, on a gravelly soil, within 3 miles of London. Must be sheltered from the north-east.—Particulars to be addressed to Messrs. EDWIN FOX & BOUSFIELD, Surveyors, &c. 41, Coleman-street, City.

BUILDING LAND TO BE LET in the best part of Hornsey, where good houses are in great request. The situation is high ground, and the soil a principal road. Good drainage and water supply. Parties requiring houses for occupation can have them built to order. Liberal advances will be made to builders. For further particulars, apply to Mr. W. JENNINGS, Surveyor, 60, Cornhill, E.C.

MANUFACTURING PREMISES, convenients situated, close to the City road and the Regent's Canal.—TO BE LET, for long, very desirable PREMISES, possessing a valuable double frontage, and comprising three floors and a half high, with suitable offices, smithy, smelting house, and yard.—For particulars, apply to Mr. THOMAS BULL, Auctioneer and Estate Agent, 86, Cornhill, E.C

WOODFORD RAILWAY.—The GROVE, WANSTEAD. Portions of this beautiful Estate are NOW TO BE LET for Building purposes and Villa Residences are much required in the locality. Soil gravel, situation healthy, and water excellent. The Snaresbrook Station is 2 yards only from the Estate, and the City is reached in twenty minutes. The Lessee will not be required to contain a clause entitling the Lessee to purchase the Freehold within a specified time. LAND also TO LET at Blackheath, Tottenham, Hampton; some very eligible SITES in the Grove road, Holloway, while only a few of which are adapted for shops, and large and very CHEAP PLOTS TO LET, at Ealing.—Apply to Mr. KNIGHTLEY, Architect, 2, Caton-street

PHILBROKE ESTATE, at Leytonstone, on the Woodford and Loughton Railway, twenty minutes from Bishopsgate Station. Eleven acres of the above ESTATE (land tax redeemed), surrounding the Seat of, healthy locality, gravelly soil, excellent drainage, water and gas laid on, and numerous roads, including the entrance, are in lots of 100 feet by 150 feet, suitable for building detached and semi-detached villas. Prepared plans and leases have been made for houses in the neighbourhood. For terms, apply to Mr. ASHBY, at the Surveyor's Office, Philbroke Estate, Leytonstone, Essex.

BRICKFIELD, SURREY.—TO BE LET, with immediate possession, within one mile of Witley Station, on the direct London and Portsmouth line, a well-adapted YARD, with suitable kiln and Tile sheds erected thereon. Large quantities of clay and sand surround them of excellent quality for the manufacture of bricks, tiles, pipes, and pottery-ware. There is chalk in the neighbourhood for lime, with an opening for a first-rate trade. A large Government Asylum is to be built shortly close to the yard.—For particulars apply to Mr. S. G. BERRY, Town's Court, near Godalming.

BUILDING LAND TO BE LET.—HACKNEY, close to the Railway Station, for fourth class Dwelling Houses

NORWOOD, on Weston Hill, for Shops and Dwelling-houses.

PERRY HILL, Sydenham, for Shops.

Advances in each case if required.

Apply to Mr. F. K. GREEN, 23, College-hill, Cannon-street, E.C.

BUILDING LAND.—TO BE LET, most eligibly situate in the very heart of a densely populated neighborhood close to Shoreditch. Church, suitable for the erection of small self-contained houses, which are much wanted in that locality, for a capital ground rent and an investment. There are some sites on the Estate in immediately favourable positions for Shops. Advances made if required. For further particulars, apply to Mr. CLARKSON, Surveyor, 9a, Great-Saint Helen's, City.

DALSTON, Eleanor Road North, Richmond Road.—BUILDING LAND TO LET in this favourite neighbourhood for Seven Roomed Houses. Advances made if required. For further particulars, apply to Mr. CLARKSON, Surveyor, 9a, Great Saint Helen's, City.

WANTED, on Lease or to Purchase, BUSINESS PREMISES in the vicinity of London, with a good Dwelling House and Foreman's Cottage; must be near a railway station or navigable river; a good supply of water from a stream or well, which runs across, if not fordable, for purposes, are indispensable.—Forward particulars and terms to F. BAXTER, Accountant, &c. 2, Guildhall-chambers, Basinghall-street, E.C.

FREEHOLD SITES for BUILDING, and FREEHOLD HOUSES, can be obtained in the best part of Prince Albert's-road, near Kensington Gore, in front of the Royal Horticultural Gardens.—Apply to C. J. RICHARDSON, Architect, 47, Prince Albert's-road, W.

TO SPECULATIVE BUILDERS and OTHERS.—TO BE LET, on Lease, or the FREEHOLD TO BE SOLD, several eligible Pieces of LAND, situate at Weybridge, and near Forest Hill, on which advances can be made.—Apply to Messrs. HARE & WHITEHEAD, 3, Mincing-court, Fleet-street, E.C.; or to Mr. F. TODD, 50, Norland-square, W.

PLUMBERS, PAINTERS, and GENERAL CONTRACTORS.—An OFFER presents itself to a Person of Small Capital (with good security), in a very Old-established BUSINESS, a few miles from London. A most ADVANTAGEOUS OFFER would be entered into with a respectable person who can command 2 or 3 hundred.—Apply to Mr. HISCOCK, Messrs. Franks, Lead Merchants, Borough, Southwark.

TO PLUMBERS, PAINTERS, and DECORATORS.—WANTED, to take a bona fide BUSINESS in the above line. Price must be moderate. Locality unimportant.—Address, A. B. C. Mr. J. King's, Wisbeach-road, King's Lynn.

TO PAINTERS, DECORATORS, and DECORATIVE ARTISTS.—The Proprietors of a FIRST-CLASS BUSINESS in one of the largest towns of the Midland Districts being desirous of retiring, are willing to treat for its DISPOSAL. Arrangements could be made for a Share only, if desired.—Apply, for further particulars, to D. J. BROWN, Surveyor, No. 27, Great George street, Westminster.

TO PLUMBERS, CARPENTERS, and BUILDERS.—TO BE DISPOSED OF, a good West-end BUSINESS as above, doing between two and three thousand a year for the last seven years. The Stock and Fixtures will be valued with, and fixtures, 300l. The stock, about 300l. taken at a valuation. No person treated with but of the highest respectability. No agents need apply.—For cases, Mr. H. CONOLLY, Lead Merchant, No 7, Hampstead road, N.W.

T. KENT'S PAINTING-BRUSH MANUFACTORY

Is continued by his Successors,

CROWDEN & GARROD,

Falcon-square, London, E.C.

Where the TRADE is supplied with the same superior quality that made the name celebrated.

N B. The names of T. KENT and CROWDEN & GARROD, are at stamped on the brushes

Also Manufacturers of the Patent India-rubber Knife-boards, Cocoa Nut Matting, Mats, &c. See Catalogue.

PATENT GRAINING APPARATUS.—TO HOUSE PAINTERS, GRAINERS, BUILDERS, RAILWAY COMPANIES, SHIP BUILDERS, &c.

One of the greatest improvements of the age is KERSHAW'S PAINT GRAINING APPARATUS, for producing an imitation of the various woods. They are very extensively used, and with great success. They are very cheap, and will repay the cost of them in two days' working. They only require a trial, and any person studying his interest would not be without them. A prospectus will be sent upon the receipt of a stamped directed envelope addressed to T. KERSHAW, Patent Graining Tool Manufacturer, 33, High-street, Marylebone, London, W.

N B. One of the Patent Graining Tools will be forwarded upon the receipt of a Post-office order for 22s.

KENT'S PAINTING BRUSHES are all stamped G. B. KENT & CO. And are manufactured solely by G. B. KENT & CO. at 11, Great Marlborough-street, London, W. Established 1777

KENT'S BRUSHES have been celebrated for their superior quality for the last eighty-four years, and may always be depended upon as the best that can be made.

PRIZE MEDAL, 1862.

HAMILTON & CO. No 10, GREEK-STREET, SOHO-SQUARE, LONDON, W. Sole Manufacturers of C. A. WATKINS'S PATENT WIRE BOUND ROUND and OVAL PAINTING BRUSHES.

SHEFFIELD SCHOOL of PRACTICAL SCIENCE and METALLURGY.

PRESIDENT.

His Grace the Duke of Devonshire, K.G. F.R.S. D.C.L. Chancellor of the University of Cambridge.

VICE-PRESIDENTS.

The Mayor of Sheffield, John Brown, esq.
The Master Cutler.
The Right Hon. Lord Wharncliffe.
Sir David Brewster, K.H. D.C.L. F.R.S.L. & E. M.R.I.A.
Sir Roderick Murchison, F.R.S. Director of the Royal School of Mines.
John Percy, esq. M.D. F.R.S. Professor of Metallurgy in the Royal School of Mines.
William Fairbairn, esq. C.E. F.R.S.
Robert Hunt, esq. F.R.S. F.S.S. Keeper of Mining Records.
Warrington W. Smyth, esq. M.A. F.R.S. Professor of Mining and Mineralogy in the Royal School of Mines.

DIRECTOR.

The Rev. G. B. Atkinson, M.A. Principal of the Collegiate School; late Fellow and Assistant Tutor of Trinity Hall, Cambridge

PROFESSORS.

Chemistry, Metallurgy, and Geology—James Allen, Ph.D. F.C.S. of the Universities of Giessen and Berlin.
Engineering and Mining—J. Thompson C.E.
Mathematics, Natural Philosophy, and Applied Mechanics—Rev. G. B. Atkinson, M.A.

The Sheffield School of Practical Science and Metallurgy will afford a complete scientific and practical education to students who are destined to become civil, mechanical, or mining engineers, or manufacturers of any kind. Its object is thoroughly to discipline the students in the principles of those sciences upon which the operations of the engineer, metallurgist, or manufacturer depend.

The education will be given by means of systematic Courses of Lectures, by Catechetical Class Instruction, by Practical Teaching in the Laboratory and Drawing-room, and occasionally by Field Excursions.

The School of Practical Science and Metallurgy will be conducted in the Buildings of the Sheffield Collegiate School. The two Institutions, although both under the superintendence of the Rev. G. B. Atkinson, Principal of the Collegiate School, are, however, entirely distinct.

A detailed Prospectus, containing Syllabuses of all the Courses of Lectures, and all other information, arrangements for boarding, &c. may be obtained by application to the Director.

THE SCHOOL WILL OPEN IN THE FIRST WEEK IN FEBRUARY, 1863.

BY ORDER of the TRUSTEES of the SOANE MUSEUM.—The Museum, 13, Lincoln's-inn-fields, will be OPEN this Season AS USUAL, on the TUESDAY in each week from the end of FEBRUARY to the 25th of AUGUST, and on THURSDAYS and FRIDAYS in APRIL, MAY, and JUNE. Cards of admission to be obtained at the Museum, or from the Trustees.

ARCHITECTURAL EXHIBITION, 9, Conduit-street, Regent-street.—Drawings, Models, and Specimens of Building Manufactures, &c. must be delivered early in MARCH. Further particulars will be shortly announced.

JAMES FERGUSSON, F.R.A.S. } Hon. Secs.
JAMES EDMESTON, F.R.I.B.A. }

GALLERIES of the ARCHITECTURAL UNION COMPANY (Limited), 9, Conduit-street, Regent-street, NOW OPEN, FREE, from ELEVEN till FOUR, daily. The Autumn Exhibition of Building Materials, Patents, and Inventions will CLOSE, FEBRUARY 28, and must then be cleared for the Architectural Exhibition. JAMES EDMESTON, Hon. Sec.

BUILDERS' BALL

THE ANNUAL BALL, in AID of the FUNDS of the BUILDERS' BENEVOLENT INSTITUTION, under the especial Patronage of the Right Hon. the LORD MAYOR, M.P.; the LADY MAYORESS, the SHERIFFS of LONDON and MIDDLESEX, and the President of the Institution, HENRY LEE, Esq. will be held at Willis's Rooms, St. James's, on THURSDAY, 12th FEBRUARY.

COMMITTEE OF MANAGEMENT.

Mr. J. Hibberd.	Mr. R. Thomas.
Mr. J. Jay.	Mr. S. Trickett.
Mr. W. H. Jackson.	Mr. W. Wood.
Messrs. Lucas, Brothers.	Mr. T. Yeo.

A further List of Stewards will be published.

Gentlemen desirous of promoting the Interests of the Institution by becoming Stewards, will please forward their names to the Hon. Sec. Mr. JOSEPH BIRD, 10, Hanover cottages, Regent's Park; or at the Office, 23, Southampton-street, Bloomsbury.

Double Ticket, 21s.; Lady's ditto, 8s.; and Gentleman's, 14s. Refreshments included.

MEMORIAL TO THE LATE H. L. STYLEMAN LE STRANGE, Esq.—Many of the friends of the late H. L. STYLEMAN LE STRANGE, Esq. having expressed a wish to mark their sense of his high character and of his great services to the cause of ecclesiastical art by a Public MEMORIAL of some kind, a Committee has been formed for the purpose of carrying this wish into effect. The Committee have come to the conclusion that the most suitable memorial would be the continuation of the work of RESTORING the PARISH CHURCH of HUNSTANTON, which was commenced by Mr. Le Strange himself; and they now invite contributions towards the work. The extent of the work done must of course depend upon the amount of aid promised in reply to this appeal. Contributions may be paid to the "Le Strange Memorial Fund," at Messrs. GURNEYS', Bankers, King's Lynn, Norfolk; at Messrs. BARCLAY, BEVAN, & CO.'S, 54, Lombard-street, London; or to any Member of the Committee. Subscriptions only, if desired, to be paid by instalments.

WATER COLOUR PAINTERS' LANCASHIRE RELIEF FUND.—The EXHIBITION will remain OPEN ONE MORE WEEK (by the kind permission of Messrs. Day & Son), at the German Gallery, No. 168, New Bond-street, from TEN a.m. till NINE in the evening.

JAMES FAHEY, Hon. Secretary.

Subscribers have free admission to the Exhibition, and one share in the distribution of the prizes, for every guinea subscribed.

Each picture will constitute a prize, and will be declared the property of the subscriber the number of whose ticket may be drawn out to be drawn with it.

As only a limited number of tickets remain unsold, early application must be made to the Secretary, or to the Keeper in the Gallery. The Exhibition must finally CLOSE to the Public on SATURDAY, 31st instant.

GLASS PAINTERS' SOCIETY.—The ANNUAL MEETING of this society was held on MONDAY, DEC. 22nd, at the Bell & Tun, Serjeants'-inn, Fleet-street, when the Auditors' Report was passed, and the Society pronounced to be in a flourishing condition. Notice is hereby given, that a SPECIAL MEETING will be held on MONDAY, FEB. 2nd, for the purpose of REVISING the RULES. HENRY HATHERLY, Secretary.

COMPETITIONS.

GRAVE-SPACE INDICATORS for CEMETERIES.—WANTED, Drawings, with Estimates, of Specimens of GRAVE SPACE INDICATORS, to be made at any suitable material. The same to be forwarded to me on or before the 3rd proximo. J. L. BELL, Clerk of the Burial Board,
January, 1863. Bourn, Lincolnshire

CONTRACTS.

CITY of LONDON, BARBERS' HALL. Important SITE for WAREHOUSES, or MANUFACTURING PREMISES, in the immediate vicinity of Wood-street, Cheapside. The Committee of the Worshipful Company of Barbers will meet at their Hall, on THURSDAY, the 29th day of JANUARY, 1863, to receive TENDERS, for letting on a building lease, for ninety-nine years, the extensive PREMISES, known as Barbers' Hall, situate in Monkwell-street, Wood-street; comprising three houses, fronting Monkwell-street, Nos. 33, 34, and 35, part of the courtyard in the rear thereof, the passage leading thereto, and the greater portion of the Company's Hall, together with the kitchen, scullery, and outbuildings, having a frontage towards Monkwell-street of about 88 feet by an average depth of about 116 feet, and an entire depth of about 135 feet.—Full particulars, with a plan of the property, elevation, and section of street front, also conditions of letting may be obtained, on application at the Clerk of the Company's Hall, by Mr. CHARLES JOHN SHOPPEE, the Company's Surveyor, No. 61, Doughty-street, W.C.; or to the Beadle at the Hall.—By order,

HENLEY GROSE SMITH, Clerk.

4, Warnford-court, Throgmorton-street, E.C.

WAR DEPARTMENT CONTRACT.—NOTICE to BUILDERS, &c.—TENDERS are required for EXECUTING the WORKS, &c. that may be required in the following Trades, at Burnley Barracks, from 1st APRIL, 1863, to 31st MARCH, 1865, viz.: Bricklayers, Masons, Paviors, Carpenters, Plasterers, Slaters, Plumbers, Smiths, Ironfounders, Painters, Glaziers, Paperhangers, and Gasfitters.

Parties desirous of Tender for this Contract must leave their names at this Office, on or before the 10th proximo, and pay the sum of 7s. 6d. for the schedule and form of Tender.

The Secretary of State does not bind himself to accept the lowest or any Tender.

Royal Engineer Office, 22a, Stretford-road, Manchester, 14th January, 1863.

SOUTH-EASTERN RAILWAY COMPANY.—To BRICKLAYERS, CONTRACTORS, and OTHERS.—The Directors of this Company are prepared to receive TENDERS, from competent Contractors, for the SUPPLY of about FORTY MILLIONS of BRICKS, required for the execution of the Line of Railway at Sandgate and Folkestone, and the new direct line through Mitcham of the South-Eastern Railway. Separate tenders for the supply of the bricks on the lands now in the Company's occupation, and for the bricks on the lands not now in their occupation at the Engineer's Office, London Bridge Station.

S. SMILES, Secretary.

Secretary's Office, 8th January, 1863.

CIRENCESTER DISTRICT of TURNPIKE ROADS.—CONTRACTS for REPAIRS.—The Trustees of the Cirencester District of Turnpike Roads are prepared to receive sealed TENDERS for the REPAIR of all the ROADS now vested in their Trust (in length 84 miles) for a term of one or more years. Full information as to the quantity and description of stone to be used, the specifications, and forms of Tender, may be obtained by application to the Clerks to the Trustees. The stone is obtainable from quarries in the immediate vicinity of the roads. Tenders will not be received later than TEN o'clock on the forenoon of FRIDAY the 30th inst. The Trustees do not pledge themselves to accept the lowest or any Tender.

BEVIR & ELLETT, Clerks to the Trustees.

Cirencester, 14th January, 1863.

METROPOLITAN BOARD of WORKS. MAIN DRAINAGE of METROPOLIS NORTHERN OUTFALL RESERVOIR.—to BUILDERS, CONTRACTORS, and others. The Metropolitan Board of Works hereby give notice, that they will meet at the Office of the Board, Spring gardens, S.W. on FRIDAY, the 30th day of JANUARY instant, at TWELVE o'clock at noon precisely, and will then be prepared to open TENDERS by parties who may be willing to CONTRACT for the CONSTRUCTION of a RESERVOIR, with Pentstocks and Machinery, also Shed, Buildings, a Dwelling-house, and other works in connection therewith, near to Barking-creek, in the portion of the parish of Woolwich, in the county of Kent, north of the river Thames. Parties desiring to submit Tenders may, upon payment of £1, obtain plans, sections, specifications, forms of Tender, and other particulars, on application to Mr. J. W. BAZALGETTE, Engineer of the Board, at the Office, Spring-gardens, between the hours of NINE a.m. and FOUR p.m. or on SATURDAYS between the hours of NINE a.m. and TWO p.m. until THURSDAY the 29th day of JANUARY. No Tenders are to be addressed to the CLERK of the BOARD, and must be delivered at this Office before FOUR o'clock on the last-mentioned day, and no Tender will be received after that hour. The Tenders being handed to the attendants at the Board of WORKS on the day appointed for opening Tenders. The Board do not bind themselves to accept the lowest or any Tender, and the party whose Tender shall be accepted will be required to enter into Bonds for the due and satisfactory performance of the works.

JOHN POLLARD, Clerk of the Board.

Spring gardens, S.W. 10th Jan. 1863.

NOTICE.—To CONTRACTORS and IRONFOUNDERS.—The Commissioners of Works will receive TENDERS from competent parties for the ERECTION of a CAST-IRON ARCH BRIDGE, according to plans and specifications to be seen at the Co. Engineer's office, No. 23, South Mall, Cork. Sealed Tenders to be forwarded to the Town Clerk, Cork, on or before the 10th day of FEBRUARY, 1863, marked on the outside, "Tender for Iron Bridge." The Commissioners not bind themselves to accept the lowest or any Tender.—By order,

ALEXANDER M'CARTHY, Jun. Town Clerk.

Office, 33, South Mall, Cork.

[For remainder of Contracts see next Page.

CONTRACTS.

CONTRACT. TENDERS are required for the different TRADES in the ERECTION and COMPLETION of a RESIDENCE and ENTRANCE LODGE upon the Hartwell Estate, Ravenston, Staffordshire. Parties desirous to Tender can inspect the drawings and specification, with conditions of contract, at the Office of Mr. STEVENS, Arcade 4, 18, Copper street, Manchester, from the 24th instant to the 29th instant, inclusive, and at the Office of Mr. J. S. BURGES, Cheapside, Hanley, from the 30th instant to FEBRUARY 3rd, inclusive, between the hours of TEN and FOUR, upon which date the Tenders must be left at either of the above Offices, not later than FOUR p.m. The quantities of each trade have been taken out, and can be had upon application.

N.B. The lowest Tender not necessarily accepted

BARNSLEY LOCAL BOARD of HEALTH.—Water-Works Department.—CONTRACT No. 2. To Contractors for Pipe-laying.—The Local Board of Health of Barnsley, in the County of York, are desirous of receiving TENDERS for LAYING DOWN about 13 MILES in length, of CAST IRON SOCKET PIPES and other CASTINGS. Specifications may be seen, and Forms of Tender may be had, on application to me, or to Mr. THOS. HAWKSLEY, C.E., 30, Great George-street, Westminster, S.W. on and after MONDAY, the 12th day of JANUARY instant; and Sealed Tenders must be delivered at my Office, not later than MONDAY, the 2nd day of FEBRUARY next, endorsed "Tender for Pipe-laying." The Board do not bind themselves to accept the lowest or any Tender.—By order, WM. H. PEACOCK,

Barnsley, 8th January, 1863. Clerk to the said Local Board.

TO BUILDERS and CONTRACTORS.—TENDERS are required for BUILDING BOYS, GIRLS, and INFANTS' SCHOOLS, together with Two Residences, &c. at Knighton, Radnorshire. The plans and specification can be seen at the Office of the Architect, where Tenders are to be delivered on the 8th of FEBRUARY. No pledge is given that the lowest or any Tender will necessarily be accepted.

THOS. NICHOLSON, F.I.B.A. Architect.

Hereford, January 16, 1863.

CONTRACTS for DREDGING and the CONSTRUCTING a TIDE JETTY. The Commissioners of the Haven of Great Yarmouth desire to CONTRACT for the following WORKS:—The Dredging and Deepening the Channels of the Rivers Yare and Waveney, from Breydon Bridge and Bridge Flats, with the removal or deposit of the soil or land raised therefrom, and the Constructing a Tide Jetty at or near the confluence of the rivers Yare and Waveney. The Contractor, for the purpose of the works only, will, at the option of the contractor, allow the use of their steam-dredging engines for the dredging, and an engine and boil for driving piles for the tide jetty; but will receive Tenders for the performance of the respective works either with or without the use of these engines. The plans, sections, and specifications of the several works, and the contracts to be entered into, may be examined at the Office of Mr. ISAAC PRESTON, Jun. the Clerk to the Commissioners, Great Yarmouth; and any further information may be obtained from the Pier Master of the Commissioners. Deposits of 75*l.* per cent. upon the respective works (one will sometimes only, and the contractor at three months after their certified completion. Separate Tenders, marked "Tender for Dredging," "Tender for Tide Jetty," addressed to the Commissioners of the Haven of Great Yarmouth, are to be delivered to the Clerk to the Commissioners, Great Yarmouth, on or before the 2nd day of FEBRUARY next. The parties to tendering will be considered as bound by the stipulations contained in the respective contracts above specified, to the party whose Tender for dredging may be accepted, who is required to provide approved security in the sum of 250*l.* for the due performance of the contract, or at his option and undertake that one such sum shall be retained out of the monthly payments of 75 per cent. until a bond of 500*l.* per cent. only. The Commissioners do not engage to accept the lowest or any Tender.—By order,

ISAAC PRESTON, Jun. Clerk.

Great Yarmouth, January 13th, 1863

LEICESTERSHIRE MILITIA QUARTERS.—Builders willing to TENDER for the ERECTION of QUARTERS for the Leicestershire Militia, may inspect the plans, specifications, and specification, and obtain copies of the quantities, of the Architect, Mr. WILLIAM JACKSON, Leicester, on and after MONDAY, the 26th instant. Tenders, sealed and endorsed "For the Leicestershire Militia Quarters," to be sent to the Clerk of the Peace, not later than FRIDAY, the 6th of FEBRUARY next. The Magistrates do not pledge themselves to accept the lowest or any Tender.

WILLIAM FREER, Clerk of the Peace.

Leicester, January 14, 1863.

THE VESTRY of the PARISH of CHELSEA, in the County of Middlesex.—SCAVENGERING and WATERING SEASONAL NOTICE TO VOTERS.—The Vestry of this Parish will meet in the Board-room at the Vestry Hall, King's-road, on TUESDAY, the 10th day of FEBRUARY next, at THREE o'clock in the afternoon precisely, to receive TENDERS in person or by CONTRACT, pursuant to the terms of a Draft Contract now lying for inspection at the Vestry Clerk's, for WATERING the STREETS and proper with the out-lying Districts, Kensal New Town, from the 1st of MARCH next to the 14th day of OCTOBER next, and for the REMOVAL of the SLOP from the said District, from the 1st of MARCH next to the 14th day of MARCH, 1864. The Tenders are to name one amount for both scavenging and Watering, and are to be upon printed forms, which may be obtained at this Office. Parties Tendering must appear personally on the day the Tenders are opened, and the parties whose Tenders are accepted (if any) will have to pay the cost of and incidental to the preparation of the Contract. Sealed Tenders signed by the proposed Contractor, with the names and description of two sufficient sureties for the performance of his Contract, are to be left at this Office on or before TWELVE o'clock on TUESDAY, the said 3rd of FEBRUARY next. The Vestry do not bind themselves to accept any Tender. By order,

CHARLES LAHEE, Vestry Clerk.

Vestry Hall, King's road, January, 1863.

THE VESTRY of the PARISH of CHELSEA, in the County of Middlesex.—SCAVENGERING and WATERING.—The Vestry of this Parish will meet in the Board-room at the Vestry Hall, King's-road, on TUESDAY, the 3rd of FEBRUARY next, at THREE o'clock in the afternoon precisely, to receive TENDERS in person or by CONTRACT, pursuant to the terms of a Draft Contract now lying for inspection at the Vestry Clerk's, for WATERING the STREETS and proper with the out-lying Districts, Kensal New Town, from the 1st of MARCH next to the 14th day of OCTOBER next, and for the REMOVAL of the SLOP from the said Districts, from the 1st of MARCH next to the 14th day of MARCH, 1864. The Tenders are to name one amount for both Scavenging and Watering, and are to be upon printed forms, which may be obtained at this Office. Parties Tendering must appear personally on the day the Tenders are opened, and the parties whose Tenders are accepted (if any) will have to pay the cost of and incidental to the preparation of the Contract. Sealed Tenders, signed by the proposed Contractor, with the names and description of two sufficient sureties for the performance of his Contract, are to be left at this Office on or before TWELVE o'clock on TUESDAY, the said 3rd of FEBRUARY next. The Vestry do not bind themselves to accept any Tender. By order,

CHARLES LAHEE, Vestry Clerk.

Vestry Hall, King's road, January, 1863.

TO BUILDERS and CABINET MAKERS. There is a desire to have TENDERING for the SUPPLY of FITTINGS to the NEW BANK at Reading for the Stamford, Spalding, and Boston Banking Company, and any particulars, on application to Mr. WILLIAM EVES, Architect and Surveyor, 4, Union-court, Old Broad-street, E.C. The lowest, or any Tender, will not necessarily be accepted.

TO BOILER MAKERS.—The Salisbury Local Board of Health are desirous of receiving TENDERS for the CONSTRUCTION of a DOUBLE FLUED CYLINDRICAL BOILER 25 feet 6 inches long by 6 feet diameter. Further particulars may be obtained on application to Mr. J. C. ROTHAMS, C.E. Surveyor to the Board. Sealed Tenders, endorsed "Tender for Boiler," to be sent to me on or before the 10th FEBRUARY next

CHAS. MARSH LEE, Town Clerk.

Salisbury, January 16, 1863.

TO CONTRACTORS.—SHEERNESS DRAINAGE WORKS.—CONTRACT, No. 1 OUTLET PIPE.—The Sheerness Local Board of Health hereby give notice, that they are prepared to receive TENDERS from persons willing to CONTRACT with them for PROVIDING and LAYING DOWN about 1,300 LINEAL FEET of CAST IRON FLANGED SOCKET PIPES, 24 inches in diameter, with tidal flap valve, &c., and specification can be had, and form of Tender obtained, by applying to Mr. JAMES LUND, the Surveyor of the Board, at his Office, No. 20, Montagu-terrace, Sheerness. Sealed Tenders, indorsed "Tender for Outlet Pipe," are to be delivered at the Office, not later than THURSDAY, the 12th FEBRUARY, 1863, at SIX o'clock in the evening.—By order of the Sheerness Local Board of Health,

EDWARD FELKIN, Clerk.

Office of the Local Board of Health Sheerness, January 13, 1863.

ST. PANCRAS, Middlesex.—To CONTRACTORS and OTHERS.—Notice is hereby given, that the Highways, Sewers, and Public Works Committee of the Vestry of the Parish of St. Pancras will meet at the Office of the Department of Works on MONDAY, the 2nd day of FEBRUARY, 1863, at SIX o'clock, in the forenoon precisely, to receive a willing to contract for SUPPLYING GUERNSEY, MARKFIELD, GROBY, and MOUNT SORREL GRANITES, for supplying Flints, Gravel, and other Roadway Materials; and for the same respectively to the terms of specification to be seen at the said Office daily. Good security will be required for the due performance of each contract. Further particulars with forms of Tenders, may be obtained at the Office aforesaid. N.B. If a Contract is let at the Office of Mr. WILLIAM BOOTH SCOTT, Chief Surveyor, as under The Vestry do not bind themselves to accept the lowest or any Tender. No Tender will be received or accepted unless made on one of the printed forms. Tenders must be delivered by SIX o'clock p.m. on the said MONDAY, 2nd FEBRUARY, 1863. By order,

CHARLES WORRALL,

Chief Clerk of the Department of Works.

10, Edward-street, Hampstead-road, January, 1863.

TO BUILDERS.—TO BE LET, the different WORKS required to be done in the ERECTION of a LODGE and FARM BUILDINGS at Stung Close, Keighley, in the county of York, preparatory to the early commencement of other and more important works on the same estate, for J. H. Craven, Esq. Drawings and specifications of the said lodge and farm buildings may be seen at my Offices in Keighley, and at the White Swan Inn, in Keighley, aforesaid, after WEDNESDAY, the 28th instant. Sealed Tenders, endorsed "Tender for Lodge and Farm Buildings," to be delivered at the said White Swan Inn before TWELVE at noon on FRIDAY, the 6th of FEBRUARY. WILLIAM SUGDEN, Architect.

Leek, Staffordshire, 21st January, 1863.

BUILDERS desirous of TENDERING for the ERECTION of a PUBLIC HOUSE, by the river, at Chelsea, are requested to forward their names, together with a deposit of 10*s.* to the Architect, from whom all further information may be obtained, on or before THURSDAY, the 29th inst. after which time no further application will be received. The requisite number of copies of the bills of quantities will then be provided, and forwarded to such builders as may have applied, and the deposit will be returned to all Tendering. The sheet of any Tender will not necessarily be accepted; and the Contractor must, if required, provide approved sureties for the due performance of the Contract.

JAMES J. LAFOREST, Architect.

11, King's-road, Bedford-row, W.C. Jan 15th, 1863

TO STOVE and RANGE MAKERS, IRONMONGERS, &c.—The Guardians of the Poor of the Stepney Union will meet at the Board-Room, at the Workhouse, York-street West, Commercial-road East, on THURSDAY, the 5th day of FEBRUARY next, to receive and open TENDERS from persons willing to supply and fix STOVES throughout the new Workhouse of the Union at Bromley, Middlesex. The Specification may be inspected after the 27th instant, at the Offices of Mr. JARVIS, the Architect, No. 2*b*, Trinity-square, Southwark, where also may be obtained printed forms of Tender (which alone will be received) and full particulars. By order of the Guardians,

22nd January, 1863. W. H. SWEPSTONE, Clerk

SOUTH-EASTERN RAILWAY.—CONTRACT for WORKS.—The Directors of the South-Eastern Railway invite TENDERS from Contractors for the due CONSTRUCTION and MAINTENANCE of the SECOND SECTION of the HORSHAM LINE, between Lennon and Tonbridge, extending from the latter place to Halstead, a distance of about twelve miles. Plans, sections, and specifications of the works may be inspected at the Engineer's Office, No. 28, Great George-street, Westminster, on payment of 10*s.* (as per set), on and after TUESDAY, the 27th of JANUARY instant. Tenders to be delivered to the Secretary not later than TEN a.m. on THURSDAY the 12th of FEBRUARY next, when the Directors will meet to open and consider the same. The Directors do not bind themselves to accept the lowest Tender, and ample security will be required. By order,

S. SMILES, Secretary

London Bridge Terminus, January 16, 1863.

TO BUILDERS.—Persons desirous of TENDERING for ADDITIONS and ALTERATIONS to HARRINGTON HALL, near Hatfield Broad Oak, in the county of Essex, may see the plans and specifications by applying to me on and after the 22nd instant. Sealed Tenders to be sent in, according to the form supplied, by the 24th of FEBRUARY next. Estates required by order of the Court of Chancery for the due performance of the works to the amount not less than 10,000*l.* The lowest or any Tender will not necessarily be accepted.

EDWARD BROWNING, Architect.

Broad-street, Stamford, 20th January, 1863.

CAUTION to ARCHITECTS and BUILDERS.—In consequence of complaints arising from the substitution of INFERIOR and SPURIOUS ARTICLES instead of SMITH'S PATENT DOUBLE ACTION DOOR SPRINGS; SMITH'S PATENT WEATHER TIGHT WATER BAR; and SMITH'S PATENT WEATHER TIGHT CASEMENT FASTENING for FRENCH WINDOWS

The above are most respectfully requested to observe that all GENUINE ARTICLES are stamped with the NAME and ADDRESS, SMITH, Patentee, 69, Princes-street, Leicester-square, London; and SUCH ONLY are WARRANTED.

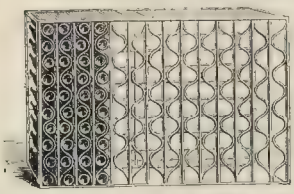
WROUGHT IRON WINE BINS.



FARROW & JACKSON

Beg to call the attention of Architects and Builders to their Wrought Iron Wine Bins, which are ADAPTED (as shown) either for BRICK ARCHED VAULTS or CELLARS with FLAT CEILINGS, the mode of fixing in either case being so simple, that they may be put up by any ordinary workman. They combine great strength with lightness and economy of space, and their DURABILITY has been satisfactorily PROVED DURING THIRTY YEARS.

The Shelves are formed of Plates of Iron laid on Bars, which rest on the Cross-bars of the Lattice Uprights, and are removable at pleasure.

Plans and Estimates furnished, and Cellars fitted complete in any part of the Kingdom. Also their

NEW REGISTERED IRON BINS,

WITH

SEPARATE REST FOR EACH BOTTLE,

Peculiarly adapted for Private Cellars.

No laths are required, and all trouble of Binning is avoided.

RANDAL STAP, Contractor,

No. 32, KING WILLIAM STREET, E.C.

Where numerous Drawings and Photographs may be seen.

N.B. The Iron Buildings manufactured by R. STAP are not fixtures on Leasehold Property.

THE PATENT AMERICAN FIRE-ENGINES

Comprise all the latest improvements brought out in America, together with some modifications to adapt them for use in this country.

These Engines are without fly-wheels, eccentrics, or dead centres, and are of considerably less weight than any others of equal power hitherto made.

Size E is capable of delivering from 500 to 1,000 gallons of water per minute, according to the height and length of hose, and weighs, in working trim, 3 tons.

Size F, which is the next smaller, will throw about half the quantity of the above, and weighs only 40 cwt.

The possibility of danger from sparks is prevented by spark-arresters being fitted to the chimneys.

A novel facility is given in these Engines of changing, in a few minutes, the size of the pumps, so as to throw either a very large quantity or a very high jet, as the buildings to be protected from fire may render necessary.

MANUFACTURED BY

EASTON, AMOS, & SONS,

GROVE, SOUTHWARK, S.E.

PRIZE MEDAL.—INTERNATIONAL EXHIBITION.

MUSGRAVE'S PATENT STABLE FITTINGS and HARMLESS LOOSE BOXES.

MUSGRAVE'S PATENT IRON COW-HOUSE FITTINGS and IRON PIGGERIES. These Inventions are confidently recommended as possessing numerous advantages not to be found in anything hitherto made.

At the late meeting of the Royal Agricultural Society at Leeds, MUSGRAVE, BROS. received a SILVER MEDAL and two awards of "highly commended;" being the only prizes conferred on any competitor in this class.

MUSGRAVE'S PATENT SLOW COMBUSTION STOVE.

This Stove is the nearest approach to Warming by Hot Water, and an excellent Aid in Ventilation.

It will burn in Churches from Saturday till Sunday Evening, without attention during the hours of worship. In halls will burn day and night for weeks, with little care. Capable of warming a large apartment for twenty-four hours at a cost of Threepence; and deserving of special attention, because of its safety, healthfulness, durability, and extreme simplicity.

Full particulars will be sent on application to the Inventors and Makers.

MUSGRAVE, BROTHERS, Ann-street Ironworks, Belfast.

DRAUGHTS & DUST ROUND DOORS & WINDOWS

EFFECTUALLY PREVENTED BY

GREENWOOD'S PATENT INDIA-RUBBER MOULDINGS

(Can be had any Length or Pattern).

The neatest, most simple, and effectual method of making air-tight joints to joiners' or cabinet work OLD or NEW.

Self-acting Spring Slides for the bottom of doors

The most imperfect door can be made air-tight without re-hanging.

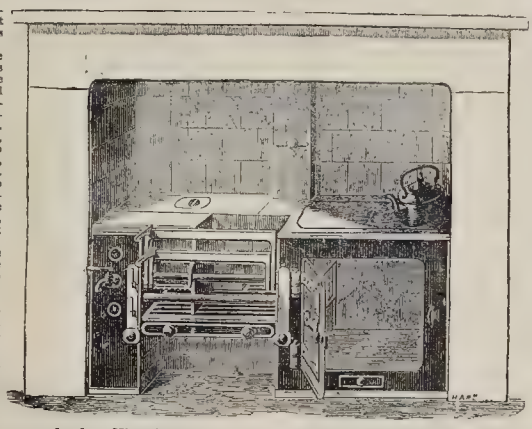
The Trade supplied on liberal terms

JOHN GREENWOOD, PATENTEE,

10, Arthur-street West, London Bridge.

CUNDY'S PATENT ECONOMIC, BRICK-OVEN, DOUBLE FALL, DOWN-BAR KITCHEN RANGE.

This drawing represents a Range 4 feet long, 2 feet 4 inches high, and 17 in. deep.



The Hob over the top of the Oven forms a HOT PLATE; the fire passes under it and all round the oven, thereby heating it thoroughly and equally all over.

The sliding Hob, which is fastened to the Winding Check, also forms a Hot Plate.

The Oven and Hob can be kept sufficiently hot for the purpose of baking and boiling, with the fire only six inches long.

This Range can be fitted up as a close Kitchener, with Two Ovens, Hot Closets, &c. if required.

This Range, also Cundy's Multum in Parvo Poor Man's Kitchener, also Cundy's Patent ORIGINAL FIRE-BRICK Warm Air Ventilating Stove, suitable for CHURCHES, HALLS, SCHOOLS, and STAIRCASES,

Can be seen in action every day from Nine till Seven, at the Show Rooms of the MANUFACTURER,

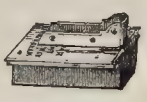
WILLIAM ADDIS,

6, 7, and 15, LEICESTER STREET, LEICESTER SQUARE,

WHOLESALE AND RETAIL IRONMONGER, AND STOVE GRATE MANUFACTURER,

Where Mr. CUNDY can be gratuitously consulted relative to the Cure of Smoky Chimneys.

A PROSPECTUS AND REFERENCES WILL BE FORWARDED ON APPLICATION BY LETTER.



PATENT CLIMAX DOOR SPRINGS,

FOR SINGLE AND DOUBLE-ACTION DOORS.

NUT

PLATE.

We invite particular attention to the PATENT LOCK FURNITURE, which we do not hesitate to say is the most perfect article now manufactured, great improvements having been recently made in it. It has been extensively used in public and private buildings, in Her Majesty's Pavilion and Camp at Aldershott—alone, many hundred sets without one single failure. It is applicable to all Locks and Latches, both rim and mortise, and effects a most secure fastening, without any screw in the neck of the knob. Perfect action guaranteed in both Locks and Furniture, if the Locks are of our own manufacture.
New rich designs in glass, china, brass, bronzed, gilt, carved woods, inlaid, &c. &c. or to any design.
THIS FURNITURE MAY BE HAD WITH PLATES OR NUTS.
A most complete and extensive stock of every description of locks, latches, brass furniture, and ironmongery, required for buildings, of the best quality manufactured, at the lowest wholesale prices.
*** Illustrations and particulars sent upon application.

FIRE-PROOF CONSTRUCTION.—
FOX & BARRETT'S PATENT
This improved system of fire proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.
The system combines ECONOMY with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.
The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete, so constructed that each floor becomes in effect a beam of artificial stone with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring-boards, or of cement, asphalte, tiles, slate, or other material.
Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one.
Further information may be obtained of the Proprietor of the Patent,
MR. BARRETT,
12, YORK BUILDINGS, ADELPHI.

CANNON IRON FOUNDRY 156, Goswell-street, St. Luke's.—JONES & BLAXTON, having made great additions to their STOCK of PATTERNS, beg to inform the Trade that they can now supply them with Plain and Ornamental Iron Columns, Girders, Railings, Gates, Iron Coping, Balconies, Window Guards, Verandahs, Ornamental Staircase Panels, Iron Staircases, Tomb Enclosures, Trellis Panelling, Lamp and other Brackets, Cantilevers, Newel Bars, Water-closet Work, Area Gratings, Fly and other Wheels, Wheel Plates, &c.

WROUGHT and CAST IRON BRIDGE, GIRDER, AND ROOF WORK,
TO CIVIL ENGINEERS AND CONTRACTORS.
WESTWOOD, BAILLIE, & CO.
LONDON YARD IRON WORKS, ISLE OF DOGS, LONDON, beg to call the attention of their friends and the public to the facilities they have for carrying out CONTRACTS for WROUGHT and CAST IRON WORK of any magnitude.
WESTWOOD, BAILLIE, & CO. have in stock a large quantity of Iron suitable for Bridge, Girder, and Roof Work, and can therefore execute orders intrusted to them with the greatest despatch, and on the best possible terms.
Patentees and Makers of Hydraulic Armour Plate Bending and Testing Machine.

SASH WEIGHTS, 5s. per cwt. at Ashton Wharf, Blackwall, and at Hope Wharf, near the Church, Rotherhithe.

RICKET'S & HAMMOND'S
VENTILATING GLOBE LIGHT,
combining an agreeable method of lighting, with convenient simple, and efficient ventilation.

The advantages obtained are these.—
A TOTAL REMOVAL OF ALL PRODUCTS OF COMBUSTION.
A COMPLETE DISPLACEMENT OF HEATED AND VITIATED AIR.
AND A CONSIDERABLE ECONOMY IN THE CONSUMPTION OF GAS.
A GLOBE LIGHT will consume 5 to 7 feet of gas per hour, giving as much light as an ordinary three-light chandelier, with a consumption of 12 feet per hour.
5, AGAR STREET, STRAND, LONDON, W.C.

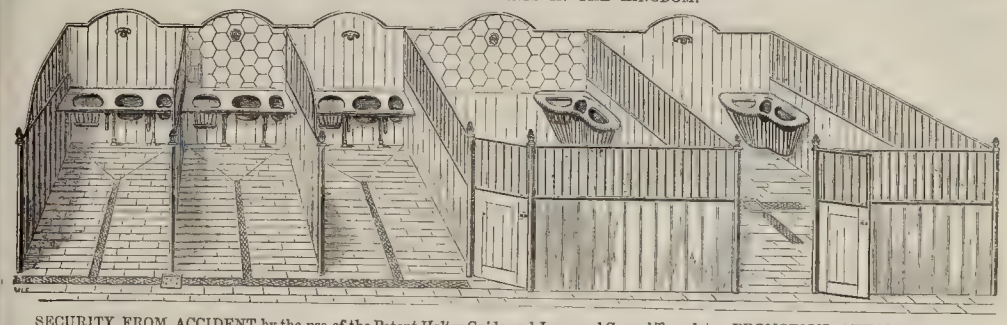
THE PRIZE MEDALS,

LONDON, 1851. PARIS, 1855. LONDON, 1862.

AWARDED TO

COTTAM & COMPANY,

No. 2, WINSLEY-STREET, LONDON, W.



FOR PROGRESSIVE AND GENERAL IMPROVEMENTS IN

STABLE FITTINGS AND HARNESS BRACKETS.

PATENTEES AND ORIGINAL INVENTORS OF

THE IMPROVED SYSTEM OF STABLE AND HARNESS FITTINGS,

PATRONISED BY THE ENGLISH AND FRENCH GOVERNMENTS, AS WELL AS BY THE PRINCIPAL NOBILITY, GENTRY, AND HUNTING ESTABLISHMENTS IN THE KINGDOM.

SECURITY FROM ACCIDENT by the use of the Patent Halter Guide and Improved Curved Top-plate; PROMOTION of HEALTH, COMFORT, and CONDITION, by the cleanliness and power of resisting infection of the Mangers and Troughs; and also of the Patent Drop Cover, to curtail the quantity of water to be imbibed. ECONOMY in the USE of FOOD, from the improved formation of the Fittings, and by means of the Patent Portable Seed-box, are some of the peculiar recommendations of Cottam's Patent Componised, Enamelled, and Galvanized Iron Fittings for Stalls and Loose Boxes.

COTTAM'S PATENT COMBINED SADDLE and HARNESS BRACKETS; IMPROVED SURFACE GUTTER, WITH MOVEABLE SAFETY COVERS; Sanitary Traps, Cheap and Durable Corn-bins, and every Article requisite for the Stable and Harness-room.

IRON GATES, FENCING, and HURDLES MADE by MACHINERY.

COTTAM'S newly-invented REGISTERED NOISELESS MANGER SHACKLE and GUIDE FOR HALTER-STRAP, and IMPROVED VENTILATING HARNESS BRACKETS, are only to be obtained from the Inventors, and can be seen in use at their Manufactory.

COTTAM & CO. exhibit for inspection, at their Iron Works, 2, Winsley-street, W., an extensive range of full-sized Stalls, Loose Boxes, and Harness Rooms, the most complete that can be imagined.

ILLUSTRATED CATALOGUES and LITHOGRAPHS free, on application to COTTAM and CO. 2, WINSLEY STREET, Oxford-street, London, W.

COTTAM & CO.'S only address in London, is 2, WINSLEY STREET, W.

N.B. WINSLEY STREET IS THE STREET OPPOSITE THE PANTHEON.

TO BUILDERS and OTHERS. TO BE SOLD, TWENTY IRON GIRDERS, viz. ten 23 feet long each, and ten 24 feet 8 inches long, weighing about two tons each.—Apply to Mr. T. HOWELL, No. 146, Piccadilly.

MORTAR MILL WANTED, new or second-hand, in good working order. Pan 8 to 9 feet diameter, rollers 40 to 50 cwt. each, with or without driving pulley or gearing. Lowest price and all particulars to be addressed to APPLEBY, BROS. Engineers and Ironfounders, 69, King William-street, London, E.C.

MONEY on FREEHOLD and LEASEHOLD PROPERTY, by the MUTUAL LOAN FUND ASSOCIATION

Incorporated by Act of Parliament, 1850), 14, RUSSELL STREET, Covent Garden, W.C. Advances from 100l. to 1,000l. upon Freehold and Leasehold Property for any term up to ten years. Mortages redeemed, and the advance can be repaid by easy instalments. Facilities afforded to tenants to purchase the houses they occupy, and the repayment of the advance taken as rent. Greater advantages are offered to borrowers than in building societies, there being no shares to subscribe for, or competition for an advance, and no deduction from the loan. No preliminary fees. Prospectus and forms of proposal sent on receipt of a directed stamped envelope.

EDWARD HARPER, Secretary.

POLONCEAU and LIMMER ASPHALTE.

ESTABLISHED  1838

For covering Flat Roofs, Paving and Flooring of every description, especially in places subject to damp and vermin. This Asphalte is now extensively used for paving Stables (as shown above), the absence of joints preventing the generation of ammonia. For Estimates and Prices, &c. &c. apply to JOHN PILKINGTON, 15, Fish street-hill, London, E.C.

Country Builders supplied with Asphalte in Bulk for covering Footings, Barn Floors, &c. with instructions to lay it down.

INDIA-RUBBER MILL BANDS, WASHERS for Steam Joints, HOSE PIPES and FLEXIBLE TUBING.

A STOCK OF THE ABOVE ALWAYS ON HAND.

JAMES LYNE HANCOCK,

VULCANIZED INDIA-RUBBER WORKS, GOSWELL-MEWS, GOSWELL-ROAD (opposite Spencer-street), LONDON, E.C.

PRIZE MEDAL—INTERNATIONAL EXHIBITION, 1862.

CONDY'S PATENT FLUID is adopted by the Leading Hospitals and by most Government Departments. It contains Nature's Disinfectant (OXYGEN), possesses the exact properties, and acts precisely in the same manner, as the gratuitous disinfectant provided by Nature for purifying the air we breathe, and called by chemists OZONE; combining, therefore, the most powerful purifying properties with a perfectly innocuous and wholesome nature, and being without odour of its own, it forms the safest and most efficient disinfectant and deodorizer for sick rooms, slaughter-houses, sinks, house-drains, sewers, cesspools, graveyards, &c., and is permanently useful for numerous domestic purposes, for which all other deodorizing agents, on account of their poisonous character, or disagreeable smell, are wholly unfit. 1s. per and 1lb. bottle,—sufficient purifying impure water, sweetening foetid casks, removing and preventing taint in meat, game, fish, &c. as well as for use in the bath for promoting and maintaining personal purity.—Obtainable of all first-class Chemists, in Bottles at 1s. 2s. or 4s each, or per Gallon, 18s ONE GALLON MAKES THREE HUNDRED GALLONS ADAPTED FOR USE.

Wholesale of the Patentee, Battersea, Surrey, S.W.

STAINING DEAL TO IMITATE ALL KINDS of WOODS. It requires NO SIZING, and will stand exposure to the weather. Light Oak, 4s. per gallon; Middle Tint, 5s. per gallon; Dark Oak, 6s. per gallon; Mahogany, 8s.; Rosewood, 8s.; Walnut, 8s. Varnishes for NAYLOR'S Stains may be had at the Factory, No. 14, James-street, Oxford street; also Manufacturer of Improved Knotting and Decorative Varnishes.

A SUBSTITUTE for PAINT, and at HALF the COST.—STEPHENS'S DYES or STAINS for WOOD.—Mr. STEPHENS has been kindly permitted to make public the following extract from a letter addressed to him by the Rev. R. H. CHICHESTER, of Littlehampton, near South Molton:—

"The effect produced by the Staining Fluid and Varnish has given such entire satisfaction, that the parishioners have requested me to procure five times the quantity now paid for, in order to finish the church."

H. STEPHENS, Chemist, 18, St. Martin's-le-Grand, E.C. late of 54, Stamford-street, S.

KENT'S PAINTING BRUSHES are all stamped G. B. KENT & CO. And are manufactured solely by G. B. KENT & CO. No. 31, Great Marlborough street, London, W. Established 1777.

KENT'S BRUSHES have been celebrated for their superior quality for the last eighty-four years, and may always be depended upon as the best that can be made.

COLOURS and VARNISHES at REDUCED PRICES.

Genuine White Lead, 20s. per cwt.; Linseed Oil, 3s. 4d. per gallon; Boiled Oil, 3s. 8d.; Turpentine, 8s. per gallon; Fine Pale Oak Varnish, 9s. per gallon, for cash, at F. LANGTON'S Colour Warehouse, 143 and 144, Whitecross-street, St. Luke's, E.C. Dry and Ground Colours, Brushes, &c. at the lowest prices.

PATENT GRAINING APPARATUS.—TO HOUSE PAINTERS, GRAINERS, BUILDERS, RAILWAY COMPANIES, SHIP BUILDERS, &c.

One of the greatest improvements of the age is KERSHAW'S PATENT GRAINING APPARATUS, for producing an imitation of the various woods. They are very extensively used, and with great success. They are very cheap, and will repay the cost of them in two days' working. They only require a trial, and any person studying his interest would not be without them. A prospectus will be sent upon the receipt of a stamped directed envelope addressed to T. KERSHAW, Patent Graining Tool Manufacturer, 33, High-street, Marylebone, London, W.

N.B. One of the Patent Graining Tools will be forwarded upon the receipt of a Post-office order for 22s.

PRIZE MEDAL, 1862.

HAMILTON & CO.

IMPORTANT TO ARCHITECTS, ENGINEERS, BUILDERS, RAILWAY, AND OTHER COMPANIES.

VIEILLE MONTAGNE ROOFING ZINC.

Company's General Agency, 12, Manchester Buildings, Westminster.

Zinc properly laid has been proved by most extensive and long experience in France, Belgium, and Germany to be a most secure, durable, and economical covering, and is now preferred to all other materials for roofs. Its extreme lightness makes it most valuable for covering buildings requiring large spans with comparatively light framing. On a rough calculation it may be estimated that not less than 41,000,000 square feet is the average quantity of Roofing surface now annually covered in the above countries alone. Within the last few years persevering efforts have been made to introduce into England proper workmanship, in accordance with the principles which are observed on the Continent, and which alone can secure the sound and perfect construction of a Zinc roof. To aid in extending as much as possible the knowledge of these simple rules, models showing all the details are to be seen in the Architectural Exhibition in Conduit-street, and the following, selected out of a very great number of recently constructed roofs, are referred to as examples:—The Patent Granary, West-India Docks; Copenhagen Works, Limehouse; a private house in Holland Park; Homes for Poor Merchants' Clerks, Muswell-hill; a large Warehouse, 77, Thames-street; Ship roof, Sheerness Dockyard; the Victoria Station, Pimlico; the Stations in the Metropolitan Railway; the Stations of the Madras Railway Company (400,000 feet); the Warehouse of Messrs. Oakes, Brothers, & Co. Madras (20,000 feet); the Refreshment Rooms at the Exhibition; the Verandah of the Horticultural Society's Conservatory; Gloucester Railway Station; Messrs. Horniman & Co.'s Tea Warehouse, Wormwood-street; Messrs. Hoare & Co.'s Brewery, Smithfield; Cape Town and Wellington Railway (60,000 feet); Fifty new Dwelling Houses at Palace Gardens-terrace, Kensington; Twenty ditto, Inverness-terrace, Bayswater.

Plans, Estimates, and all useful information will be furnished, without charge, by applying to either of the Directing Architects.

JAMES EDMESTON, 5, Crown-court, Old Broad-street.
R. G. FISHER, 12, Manchester-buildings, Westminster.

N.B. No covering can be more economical, durable, and secure than Zinc when well laid, but good Zinc badly laid will spoil the roof, and, with a view still further to encourage good work, a special Discount will be allowed to all persons upon the Zinc used in roofs, when certified by either of the above Architects to be properly laid.

THE BUILDER'S and CONTRACTOR'S PRICE-BOOK (Lockwood's, formerly Weale's) for 1863.

Revised by G. R. BURNELL, Esq., C.E.

This book is now the universally recognised standard in the settlement of disputed accounts. The present edition has been thoroughly revised by a well-known practical architect and engineer. Not being printed from stereotype plates year after year, as is the case with most books of the kind, errors are not perpetuated, and the opportunity is taken in every reprint to introduce current prices and other desirable improvements.

London: LOCKWOOD & CO. 7, Stationers'-hall-court, E.C.

THE ENGINEER'S, ARCHITECT'S, and CONTRACTOR'S POCKET-BOOK (Lockwood and Co.'s, formerly Weale's) for 1863; greatly improved, with many new Tables, and much valuable and useful matter.

London: LOCKWOOD & CO. 7, Stationers' Hall-court, E.C.

BENNETT'S WHARF, Grand Surrey Canal Basin, Peckham.—TO BE SOLD, Two 10 horse Portable ENGINES, and one 6 horse ditto, by Clayton & Co.; one 8-horse ditto and one 6-horse ditto, by Garrett; one 10-horse portable engine, and one 7 horse ditto, and one 7-horse vertical engine and boiler, by Chaplin on wrought iron carriage and coal irons, wheels; one contractor's locomotive, in capital condition; 14 earth-wagons, two capital timber drays, one circular saw, mortar-mill, six wrought iron truss plates, 48 feet 8 inches long, 13 inches wide, and 1¼ inch thick; a quantity of Staffordshire blue, Gault, and Suffolk white facing Bricks, &c. &c.—Apply on the Premises; or of J. J. BENNETT, No. 3, Hyde-terrace, New-road, S.E.

LIGHTNING CONDUCTORS.

R. S. NEWALL & CO. Patentees of the COPPER ROPE LIGHTNING CONDUCTOR, supply the same, with the joint and all staples, complete for fixing, at the following prices:—

Three-eighths-inch diameter	1s. 0d. per foot.
Half-inch diameter	1s. 6d. "
Five-eighths-inch diameter	2s. 0d. "

R. S. Newall & Co.'s Patent Copper Rope Lightning Conductor is being fixed by architects, engineers, and scientific men, in all parts of the world.

Offices—130, Strand, London.
" Gateshead-on-Tyne.
" 27, Duke-street, Manchester.
" 66, Anderston-quay, Glasgow.
" 17, South Castle-street, Liverpool
" Exchange-buildings, Dundee.
" 7, Frederick-street, Aberdeen.

TO IRONMONGERS, BUILDERS, &c.

PATENT WROUGHT-IRON WELDED TUBE for GAS; Galvanised ditto, for Water; High-pressure Cocks, &c. Manufacturers of Dr. Arnott's Improved Ventilators.

HULETT & CO. 55, High Holborn.

The PRIZE MEDAL for SUPERIOR PATENT SASH and BLIND LINES, was awarded to JAMES AUSTIN, at the INTERNATIONAL EXHIBITION, 1862.

AUSTIN'S IMPERIAL PATENT SASH and BLIND LINES.

To BUILDERS, CARPENTERS, and BLIND MAKERS.

J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his

IMPERIAL PATENT FLAX SASH-LINES

of which he is now making four qualities, and he strongly recommends that in all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently cannot give so much satisfaction to the consumer.

They can be obtained of all Ropemakers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country.

ESTABLISHED 1774

TO ARCHITECTS and BUILDERS of CHURCHES and CATHEDRALS.—FOR SALE, the celebrated STEEL BELL from the EXHIBITION, manufactured by the Bochum Cast steel Company, and weighing 10 tons.—For particulars, apply to HEINTZMANN & ROCHUSSEN, 9, Friday street, Cheapside.

BOILERS.—TWO STEAM BOILERS for SALE, 7 feet diameter by 14 feet long; two fire boxes in each, 3 feet diameter by 7 feet long; also four patent vertical tubes in each boiler; one steam chamber, 3 feet diameter by 10 feet long; two stop-valves, safety valves, feed valves, and one blow-off valve, and furnace fittings for one boiler.—For price and particulars apply to WILLIAM ROBERTS, Engineer, Thames Plate Glass Works, Blackwall, E.

The Builder.

VOL. XXI.—No. 1042.

Of Monuments and Memorials, and of a Training School for Monumental Design.

E have witnessed the establishment of schools of design in all parts of the country for teaching the art of ornamental composition, and the application of suitable decoration to various branches of manufacture, to household furniture, and to the decorative enrichment of the more important kinds of architectural interiors. Some good effect produced by the training of these schools we have seen manifested in works of various kinds which have recently done honour to our native art in the great International Exhibition of 1862; but we have not at present a school, nor even a distinct branch in any of our artistic training schools, devoted to that highest kind of ornamental design which is applicable to important public monuments of a partially architectural character. No official public training of this kind is at present to be had in this country; and yet the advantages that might be derived from the establishment of a separate branch in already existing schools in which this important department of art should be taught, are incontestable. The art of decorative composition as specially applied to the ornamental accessories of public statues and other public memorials of analogous character ought to be known among us, but it is not. It is not known because it is not specially taught or studied; and without effective teaching and earnest study it will certainly not develop itself. It is a class of art that is not of spontaneous growth. Without a training-school of the precise character alluded to, it may be safely affirmed that the recent monuments of Paris, and, above all, the sumptuous decorations of the new Louvre, could never have been executed with the feeling of profuse magnificence that will long insure to Paris a pre-eminence as the metropolis of the Fine Arts.

It has been shown in a recent article in the *Builder*, and often before, that the accessorial features of our public statues and memorials are of the poorest kind; that even the masonry of the pedestals, or columns, is unworthy of any sort of monumental structure. The usual process in erecting a public memorial seems to be as follows. A statue is procured (frequently the result of the grossest job in the selection and patronage of a favoured artist), and then, the funds having been all lavished on the fortunate *protégé* of some influential patron, the pedestal and accessories become the result of some contract job, done at the lowest possible price, and, of course, in the worst possible manner. Our sculptors have not been trained to consider that the mere portrait-statue should form but a small part of a memorial erected in honour of a departed celebrity, whatever may have been the character of his services. It should form, as we have before now pointed out at length, but the nucleus of a composition destined to surround the statue with artistically-expressed signs of public sympathy, as the representative of a departed member of the national family whose career had shed honour upon his country. This feeling in the design of public memorials of a monumental character is fully appreciated by our Continental neighbours; but the reason of its being so much better understood by them than by our own artists is, that in Paris there is a special department in the *Ecole des Beaux Arts* devoted entirely to the combination of architectural and sculptural art, in which the united labours of the sculptor of the human figure, the ornamental carver, and the architect, must be harmoniously united, each bringing the best powers of his own speciality to the work, before a truly grand monument, such as those of the fifteenth and sixteenth centuries, can be produced. Such, for instance, as the elaborate tomb of the Cardinal d'Amboise, in the cathedral of Rouen, which, with all the defects that a modern critic might point out, is exquisitely beautiful, not only in a general profuse richness of effect, which at once arrests attention and admiration, but in the exquisite finish of the elegant details, which are so elaborate that the spectator is irresistibly detained to examine their almost endless ornamental details, each wrought out with the conscientious skill of a real artist.

The establishment of the *Cours d'Ornement et d'Ajustement*, in the *Ecole des Beaux Arts*, has been the means of teaching a new race of French artists the secret of designing sepulchral monuments and other public memorials in a style of magnificence worthy of the descendants of the great artists who produced those fine Mediæval monuments, many of which are still found enriching the churches and public places of France, notwithstanding the numbers which were so recklessly destroyed during the Revolution.

The subject selected to test the powers of the pupils in the *Cours d'Ornement et d'Ajustement*, in the last session of the school was, a design for a public monument to the great French sculptor of the Renaissance epoch, Jean Goujon. Many of the drawings exhibited considerable powers of invention in the design of appropriate ornament, and skill in the grouping and general distribution of the ornamental accessories to the principal figure, evidently the result of very careful and successful training. The two selected as worthy of the first and second Rougevin prizes were, however, much in advance of all the others,—a satisfactory proof of the good taste and impartiality of the judges; though it should be stated at the same time that the one to which the second prize was awarded was thought by many experienced artists to be the best design of the two.

As a contrast to the baldness and poverty-stricken style of the accessories by means of which the statues of our British worthies are presented to the public, it may not be out of place to describe the decorative features which, in the two designs in question, were made to support, decorate, and protect the proposed statue of Jean Goujon. The fine design which received the first medal, accompanied by a gift of 600 francs, was the work of M. Pascal, a young *élève* of M. Questel, the well-known architect. This design is that of a mural monument, consisting of a projecting base surmounted by appropriate mountings, and supporting a projection of sufficient prominence to contain a deeply-recessed niche for the reception of the portrait-statue. This central portion of the composition is extended laterally by means of wings of corresponding character, but less prominence, which have the effect of uniting the central projection with the general level of the supposed wall to which the monument is attached, and so shade off the general composition into the mass of the building of which it is intended to form an integral, or at all events an attached, portion; and prevent it from having the appearance of being simply stuck on, without any of those devices of artistic design by which alone one work of art can be grafted upon another. The details of the composition are in many respects very good, while in others they exhibit the short-comings seldom entirely absent from the works of an inexperienced pupil. The figure of Goujon, in the costume of his time, is sufficiently characteristic in conception, but poor in treatment. It is not fair, however, to criticise this feature of the composition too closely, as it is only the sketch of the ornamentist, to fill the niche as a test of general effect; the real statue being of course the destined task of an artist of another and a higher class. The pilasters at either side of the niche are of a reduced and Mediævalized Corinthian order, and the ornaments filling the plain spaces furnished by the treatment of the architectural portion of the design are of a delicate Renaissance character, of the style in which Goujon himself loved to design; for those who are regularly trained to design monuments of this class would never dream of a simple portrait being all-sufficient, when placed upon the cheapest, and of course meanest and plainest, kind of pedestal. They necessarily seek to enrich the pedestal or niche which is destined to receive the statue with various kinds of appropriate enrichments.

The fawn from Goujon's famous group of Diane de Poictiers, and also the separate figure of Diane herself, are both represented as in bronze, while the general composition displays in its various features marbles of various colours, the figure of Goujon being represented as of pure Carrara marble. The whole composition is surmounted by a rich cornice and pediment of semi-Classical character; and the effect of the entire design is that of a compact monument, very highly elaborated, yet having the one unpardonable fault of producing a general impression of not being as rich as it ought to be, in proportion to the great amount of ornament employed.

The design which gained the second Rougevin prize was that of M. Brune, another pupil of M. Questel. In this design, which is of the same character, that of a mural monument, the general effect is much richer, though the main outline of the composition is perhaps not so compact. The design of the statue is also inferior to that of M. Pascal's work. Between the columns which form the wings, however, very graceful features are introduced, which greatly add to the rich and genuinely sculpturesque effect of the whole. These consist of two nymphs bearing vessels of water, which they are pouring forth; the one from a vase, supported on the hip; the other from the shoulder. They are, if we remember rightly, taken from the graceful *fontaine des Innocents*, one of the best works of Goujon, and from the last-named of these graceful figures, it may be remarked, or from an involuntary reminiscence of it, M. Ingres undoubtedly conceived the first idea of the exquisite picture, "La Source," so much admired in our last International Exhibition. At the feet of the sculptor's own statue lies the torso of the famous Diane, still incomplete, and wanting the last touches of the ever-graceful modeller. The only defect of this last feature is that it is too small. The enrichments of the niche are very carefully wrought out, and full of artistic thought and treatment; every spray of ornament and every enriched moulding being conscientiously studied. The pediment, which forms the raised centre of the composition, is interrupted (viciously) in its rise to the culminating angle by breaking off into scrolls, each side forming a sloping support for a recumbent figure, after the manner of those introduced in this way by Michelangelo in the chapel of the Medici at Florence. This not original device affords the means of introducing reproductions of two more of the works of Goujon; but then the models in the Medicean chapel which have furnished our young designer with his idea are too well known, and they are, moreover, too entirely unapproach-

able in grandeur of conception and execution, to bear repetition at the hands of a novice without rousing the critic to warn the tyro, however strong he may be destined to become, against trying on the clothes of the giant till he is big enough and strong enough to wear them.

In London we cannot hope to improve until this special branch of the fine arts, combining, as it should do, the labours of the architect, the sculptor, and the ornamentist, each of the highest kind, shall be better understood.

We have all the raw material ready to hand,—plenty of artistic talent, which only requires a course of the requisite kind of training. When this training shall have produced a band of competent young artists, full of enthusiasm to go to work, let us have competitions, under wise management, for a series of public memorials, worthy of the truly great and useful among our forefathers,—Caxton, the first English printer; Shakspeare, Milton, Wren, Newton, Hogarth, Reynolds, James Watt, Stephenson,—in short, our great men of every class. We may by such a course hope to become the possessors of a series of national monuments and memorials worthy of the nation; that is, if the great carbuncle of jobbery be fairly and clearly cut out from the system. As a proof how inefficient both architects and sculptors have proved in the design of decorative public monuments when the kind of art necessary to produce them is not taught, we may recall the circumstances under which the great national monument of Russia, recently erected at Novogorod, was produced. At a public competition, open to Russian artists of every class, M. Mikeshine, a painter, was the successful candidate; his design alone realizing, in its combination of picturesque richness with architectural grandeur and sculpturesque refinement, the ideal which the Russian Government had formed of what such a work ought to be. We have a fancy that some of our great scenic painters,—David Roberts, for instance,—might produce a successful design for a grand and generally impressive monument, if led to attempt it in combination with an architect. Both sculptors and architects were associated with M. Mikeshine, to enable him to carry out his work with all the advantages appertaining to tested technical skill in the various departments of the work; but the supreme directorship was left with M. Mikeshine, in order to insure the realization of his design according to his own picturesque conception. Had Russia possessed a number of art students trained to the design of monuments of a memorial character, it is hardly likely that the dashing sketch of an imaginative painter would have secured the prize in such a competition.

LONDONERS.

THE returns of the Registrar-General are full of interest, and will afford feasts of facts to future historians. If the office had been an early English institution, we should have read the vicissitudes of our race through the intermediate centuries by a brighter light than that afforded by chronicles and pipe-rolls. We have occasional notices of the causes of the death of kings and princes,—how they were starved to death, or stabbed, or smothered, or blinded with red-hot pincers, or struck on the head with a pole-axe, or drowned in wine, or how they fell on the battle-field pierced with arrows or covered with wounds, or lost their heads on the scaffold. But, with the single exception of the Plague, we are ignorant of the manner of death of the millions who have gone before us. We hear, too, occasionally of numbers—of Jack Cade's immense mob,—the mob, 300,000 strong, under Wat Tyler,—of a million of men perishing in the wars of the White and Red Roses,—of thousands falling in Welsh, Scottish, and French battles; but we have no definite knowledge of local populations. We may judge of the interest that future ages will take in the reports of the registrar of our own times by that we should feel could we turn to a record of the annual births, deaths, and marriages of the Plantagenet period.

But the Registrar might give us still more curious information. It is not enough for us to know that there are upwards of three millions of human beings in London. We would inquire whence do they come? How many of these are Scotch Londoners, how many Welsh, how many Irish? and, subdivisionally, how are the counties represented in London?

A large proportion of the population of London should be looked upon as picked men, because every day the ranks are recruited from the most promising sons of country families: comparatively few are Londoners proper. The skilled mechanic whose indentures have just expired makes for London: the tradesman who wishes to take his son into partnership sends him first for a few years' experience in London: the country attorney articles his son to a London solicitor. The chances are ten to one that the most courageous, energetic, self-reliant of these young men settle in London and work their respective ways to competence: the more yielding natures return to their native towns. The population of London is recruited, too, by those whom death or misfortune has turned adrift to seek new homes. In due time all these people become Londoners. They are absorbed into the mighty mass, and are never prominent upon its surface; but they are on it nevertheless, and help to give new impetus to it.

Could we inquire at every shop-door in any of our principal streets, we should find that few of their owners were bred or born in London. Take the sunny side of Oxford-street, with its broad white pavement and boundary of bright shops, its roar of passing omnibuses and flash of cabs. That bald-headed old gentleman, with his elbow resting on his window-frame, fifty years ago guarded his father's sheep from wolves on a Welsh mountain. His next-door neighbour is the son of an innkeeper in a Scottish village; the next the son of a Suffolk sailmaker. This jeweller's father was a Buckinghamshire farmer. This grocer could tell of nights at sea on board his father's herring-boats off Yarmouth. The owner of those festoons of fretted lace, so deftly placed on backgrounds of gorgeous velvets, owns quaint, gabled, pebble-paved Shrewbury for a birthplace. Yon furrier, whose sables and ermines a monarch might envy, calls Poland his "faderland." Here and there we should find shops occupied by men whose fathers had lived in them before them; but the instances would be proportionately rare. Or take one of the narrow, dingy back streets, with its perspective hazily terminating in another back street, and in which there appears to be a perpetual "partial eclipse." The song that tailor is humming, as he sits sewing close to the window to catch all the light he may, is German. His little yellow-haired daughter is humming it, too, as she comes out of the house on her road to school, close by. But the book in her hand is English, and it is unlikely that she will ever know more of Germany than the songs and tales her father tells her. On the floor above the tailor, lives a widow's cap-maker, that is to say, a worn-out little man, who daily plods from milliner's shop to draper's shop, all over London and its suburbs, with a large black, shiny, shabby leather-covered basket, nearly as big as himself, to sell the muslin mysteries made by his wife and her out-door assistants. This man is the only Londoner proper in the house, for the second-floor is occupied by a journeyman joiner and his wife, from Hampton. The pianoforte tuner next door comes from Canterbury. He came to town long ago to work under one of the great "makers;" and, by a transition not unusual, has turned into a tuner. Canterbury would be no field for him now. He dreams sometimes of the cathedral, the shadow-flecked cloisters, the ancient gateways, the red-coat-dotted streets, the green pastures and still waters, but means to die a Londoner. His two rooms are on the ground-floor: they are curiously pervaded with pieces of green baize, odd cases opening like diptychs, and showing musical instruments enshrined within, calamanco bags, with the tips of violin sticks peeping out of their necks, tuning forks, rings of wire and catgut. The first-floor over them is advertised as "furnished apartments to let," and changes occupants nearly every week. The second-floor is tenanted by the landlady who, to the scant profit gained from the letting of these apartments, adds that of staymaking. She is the widow of a Government clerk, who was tempted from the heathery wolds of Yorkshire, by the offer of an appointment worth 80*l.* a-year. And so on from house to house. The focussing of foreigners in the district of Leicester-square has been often remarked; and there are courts with populations that are exclusively Irish to a man. The early education and impressions of all these men would imbue their lives with distinct tints; but in their reminiscences there would be generalities which would be shared by all, and quiver in the hearts of all alike; for although every man taken apart is unlike all others; all men, taken together, resemble each other. Nor are their several nationalities and provincialisms effaced without the wear and tear of time. For years after a Welshman arrives in London, he weekly makes his way to the little Welsh chapel in Jewin-crescent, where there is a Welsh congregation, and where the Welsh language is spoken with the purity of the dew upon Cader Idris, and where he is sure to see the latest arrivals from his native land. And so, too, with the natives of other countries. There are Scotch, French, German, Bavarian, Spanish, Greek, Russian, Swedish, and Swiss chapels in London, quite as regularly attended. In the same way Northumbrians turn to the Hotspur Club as to a tryst, and read the *Alnwick Mercury* and *Newcastle Journal* before the *Times*. The Registrar-General might tell us the exact composition of the sinewy, stalwart, enterprising population called Londoners.

THE LATEST EDITION OF CHAMBERS'S TREATISE.*

IF the publication of a cheap edition of Chambers's Civil Architecture should lead to increased study of the work, enriched as it was greatly by the introduction and notes of Mr. Gwilt, a considerable service may prove to have been rendered to our art, and very opportunely. The last editor, Mr. Leeds, indeed has not contributed much in amount, in notes which he has appended to some of the divisions of the treatise; and the notes are in part recapitulatory of matter from his hand, which has at various times appeared amongst writings acknowledged as his, or which have been fairly attributable to him. Seeing the value which there is however, in the matter, both that now appearing, and that in his excellent little book, the treatise published by Weale, on the Orders, we regret that Mr. Leeds has not been allowed to supplement the labours of Gwilt to the extent which his own stores of thought, and the results of a quarter of a century's researches by others since the date of Gwilt's edition, would have admitted of. He has not even named his treatise on the Orders, a work which more than any other on the subject, would be capable of correcting errors that linger, as to the Orders constituting the sole matter of classical architecture; or those of variously prejudiced persons, that the Orders must not, or cannot, be altered; or those, most recently prevalent, that the Orders as of Vignola, Palladio, Chambers, or some other master, can be of no value whatever towards the architecture of the future. The plates of the present edition of Chambers are those of Gwilt's, transferred to and printed from stone; and considering an inferiority of result, which makes considerable difference where scale is small, the edition will not be of much use to those who possess the original one of Gwilt, together with the treatise on the Orders by Mr. Leeds. Therefore, if we express any satisfaction at the appearance of such an edition as the present, we must be allowed to hope that the publication will not stand in the way of the appearance of such a treatise as Mr. Leeds could supply, on the comprehensive subject of those styles of architecture of which the Orders form part. Publications which either, only add to the number of books, or hold the ground against something better, are to be regarded as evils, rather than sources of good. The present edition of Gwilt's Chambers appears to have been published originally with some of the numbers of a periodical, in 1860, though not so stated except on the plates.

Mr. Leeds has added no note to that part of the volume which comprises Mr. Gwilt's introduction, and scarcely any to the opening chapters of the original treatise. He might have corrected one slight mistake which there is in several of Mr. Gwilt's representations of orders from chief examples. Mr. Gwilt shows as crowning members of the entablature of the Parthenon order, the echinus and fillet which are the crowning members of the raking cornice of the pediment; whilst a fillet and bird's-beak moulding, of the corona, which carry antefixæ, form the real termination of the entablature of the flanks (as of course of that of the fronts also) of the temple. The crowning members of the Parthenon pediment, usually de-

* "A Treatise on the Decorative Part of Civil Architecture. By Sir Wm. Chambers, K.P.S., F.R.S., F.S.A., F.S.S.S. With illustrations, notes, and an Examination of Grecian Architecture, by Joseph Gwilt, Architect, F.S.A." Revised and edited by W. H. Leeds. 4to; pp. viii. & 336; plates 11 & 54. London: Lockwood & Co. 1862.

signated together as *cyma*, from the form in other examples, are returned horizontally only a very short distance along the entablature of the flank, or just enough for a single lion's head. Mr. Gwilt's crowning "cyma" (*cyma recta* and fillet) also marked "restored" in the representation of the Doric order of the Temple of Apollo in the Island of Delos, and similarly shown in his plate of the Ionic of the temple on the Ilyssus, and in that of the Minerva Polias order, must be so indicated in error. The Greek system was to confine these members to the pediment, and to place the antefixæ of the flanks immediately upon the fillet of the corona, as we have said, and as they are in the monument of Lysicrates. The other method, continuing the crowning mouldings of the pediment as those of the flanks, was Roman rather than pure Greek.

Notwithstanding that some expression of regret has appeared necessary, we must say that the notes which the present editor has added to the work, may be read with advantage. He has no extraordinary admiration for Chambers, and no respect whatever for Vitruvius as a teacher,—considering his influence to have been disadvantageous,—and he is anything but a defender of the practice of Italian architecture as it has been in this country, unless as at the hands of Sir Charles Barry. But he perceives that, if any style is to be regarded as either worthless for lessons, or exhausted and incapable of serving as a basis for, or contributor to, future art, such style is not any one of those which are called Classical. The name "Italian" has led people to ignore facts both of previous centuries, and of the present day; and which were, and are, those of architecture throughout the length and breadth of European civilization, and in the New World no less than the Old; whilst the designation "Revival" has led to forgetfulness, incomprehensible in educated architects, that the architecture in Italy and France from Brunelleschi to the present day, has exhibited a succession of *inventions*, and no mere reproduction of Roman examples, as the argument, if it mean anything, of those who depreciate the "Italian," would have us suppose. The Greek orders, within our recollection, were regarded as things which if used, could not receive any addition or modification. Yet, in the antique, the variety in the small number of examples, as in the Ionic capital, was considerable; and every discovery since the time of Stuart and Revett, has tended rather to show that there was entire liberty, than that invention was subject to trammels of orders or of rules. Even the method of arranging the proportions of an order by modules seems to be about to be no longer admitted as consistent with practice of the Greeks. Mr. Leeds has not now allnded to the evidence which the Germans have afforded to the modern capabilities of Grecian architecture; though he may have done so on other occasions.

Precision of thought, or clearness of ideas, without which perspicuity in the language of explanation is impossible, is served by good nomenclature, as we have often remarked. The want of such a nomenclature has been felt by every conscientious writer on architecture; whilst also it has had perhaps the chief share in alimenting controversies wherein men forget the pursuit of art in that maintenance of dogmas so apt to result from study restricted to that of a single style. Mr. Leeds, as he shows in this new edition of Chambers, has done something, by contributions to our nomenclature, to induce accurate conceptions of things. His term *fenestration*, now generally adopted, has even helped to direct attention to the quality which, most of all the attributes of the architecture of the so-called Revival, gave it the character of original style, the quality which it was left to Barry in this country, to exhibit in erected buildings. The term *astylar* applied to composition where the effect is obtained, without the use of columns, and *mycrostylar*, where the columns are subordinate to decorated fenestration, are also useful. The designation *anthropomorphic pillars*, to comprise Persians, and Caryatides, has also something to be said in its favour. *Intercolumn* for the space between two particular columns, in preference to *intercolumniation*, which would be reserved to the manner of spacing the columns, or proportion; and *portal* when, as often, more exact than *doorway*, or than *door* (which last even, is used sometimes where doorway is meant), are others of Mr. Leeds's additions. He has spoken in their favour in his notes in the body of the present work; but he has not inserted them in the Glossary at the end. *Eumorphic* is an adjective which he finds very useful. *Quadrantes*, for square columns, or piers which show each face as a pilaster, would have a form in the singular that would be scarcely distinguishable from the word signifying the quarter of a circle. *Inter-fenestration* is a term which he would use for the spacing of windows; and *hyper-fenestration* for an arrangement of ceiling-lights.

The ill-effects which can result from an original blunder, and the connexion between false ideas and retention of a term no longer correct, are strikingly shown in the designation, "Orders," which we do not know how to get rid of. Architects may have now a restricted sense of the term; and possibly, even the public, presented everywhere with architecture of some sort, in which the Orders are wanting, may have become disabused of a notion that these "Orders" formed the whole of architecture. It is unquestionable, however, that the art has been retarded by the difficulty of abandoning the term. The editor observes,—

"It is not altogether without reason that the hitherto-received as orthodox doctrine of the Five Orders has been of late brought into disrepute. Not only does it authorise, but even insists upon, not only the most servile, but the most mechanical copyism. Dispensing with, even prohibiting, any exercise of the artist mind, such system reduces what ought to be design nearly to the level of manufacture. What are termed Orders ought rather to be regarded as Classes of columns and their entablatures, which, though conforming respectively to certain normal proportions, and preserving certain characteristic details, admit of great, almost illimitable diversity.

Far better would it have been for Modern Classic had the writings of Vitruvius never been brought to light, or else estimated at their real worth, instead of being regarded with superstitious reverence.

The division of the Orders into five gives either too many or else too few. Too many, because it makes distinct orders of the Corinthian, and that variety of it invented by the Romans, and called the Composite. The same may be said of the modern Tuscan and Doric orders, since they plainly enough belong to one and the same general class: or else, if each strongly-pronounced variety of the same original type is to be accounted as a separate order, the orders might be greatly and also very inconveniently multiplied. There are, for instance, authentic examples of the Ionic which have nothing in common—are altogether dissimilar in expression, except that the capital is voluted. The same may be said of the so-called Corinthian or foliaged capital order, to enumerate all the varieties of which would be no easy task. Let it suffice, then, for comparison's sake, to place only two of them in juxta-position: the Tivoli example of Corinthian and that of the Pantheon, or else that exhibited by Chambers himself as the technically-correct representative of the order. Hardly do we need stronger evidence to convince us that it is possible for striking varieties to be produced which, however strongly marked may be their differences, partake alike of the same generic character."

The Ionic elsewhere, he regards as not clearly traceable to the columns at Persepolis. The question is one on which it seems to us, much more might be said, taking probable dates into consideration, than has been said by Mr. Fergusson. But in undervaluing evidence of some connexion, Mr. Leeds seems to us to overlook the original argument respecting the capital, and the evidence of the fluted shaft.

We are inclined to go farther than he does in the comparison between the Italian voluted capital and the Greek; for, we consider, that however beautiful was the Greek form for the position of columns *in antis*, the capital of the angle column in the Greek prostyle or peripteral plan, with one volute obliquely placed, was a bungle and a deformity.

On the subject of pilasters, or antæ so used, Mr. Leeds, like other writers who say there is no Greek precedent for them, is not strictly accurate. There is one precedent; and though only one, it may be quoted with advantage to questions which he has touched in his "Note on pilasters and antæ." The example, and this is not the first time we have had to mention it, is in the Erectheion. The Greeks also used the square columns, the "*quadrantes*," to the value of which Mr. Leeds has usefully called attention. There is one example in the Choragic monument of Thrasyllus; and the plan of the Parthenon in Mr. Penrose's book, affords some slight evidence that the form was used in the interior of this latter building.

Speaking of arcades and arches, Mr. Leeds remarks that both impost and keystone are essential to the fall expression of an arch of any magnitude; and he instances the "tame effect" from the want of them in "the otherwise noble arch" on Constitution-hill. Rustication, which has been tabooed by writers of a certain class, he speaks in favour of, rightly giving amongst its advantages, that of its producing "richness of surface, and what in architectural language is called *colour*." There are more varieties of it, he shows, than have been introduced into recent buildings. In speaking of sculpture in pediments,—which he would restrict to three figures and ornament, on the ground that the angles with crouching figures cannot be successfully managed,—though the view may be a not ill-founded one, he seems to us to have made an omission in not directing attention to a certain method of treatment, as by the most experienced architect-sculptors, which overcomes much of the objection of the confining framework of mouldings. The standing figures should be so tall, as, with the whole composition in entire relief, to allow some of the heads, or other parts of the composition, to intersect the line of the bed-mould, or even corona, as seen from below. However, there are many crowded pediments that would have been the better, designed as to their sculpture, on one of the methods which Mr. Leeds and Mr. Garbett have recommended.

In his note on balusters, Mr. Leeds remarks on the difference between balusters and columns, in the form, as showing that into what is pleasing in each, the point of scale enters; since the form of either could not be adopted with the scale of the other.

Mr. Leeds's notes on doors, on windows, and on niches and statues, contain some valuable hints. He speaks of the doorway in the west façade of the Bank, as having "not its rival in the metropolis" for *grandiosity*. The treatment of the doorways under the portico of St. Martin's Church he condemns; because the centre doorway, from being arched, yet not rising higher than the others, shows as positively lower. As to pediments over doors that are within a building, or even under porticos, he considers it is not altogether without reason that they are objected to. Distinction between exterior and interior, in design, should be observed; and opportunity should be taken to increase it. This might be by means of a finial of scrollwork, perhaps spreading out below to the extremities of the cornice. He observes of windows, that whereas sashes were formerly clumsy, we have now got into an opposite extreme of dispensing with bars altogether. The effect, he does not consider the best, and remarks that Barry avoided windows divided only by the meeting rail of an upper and a lower sash. He objects to Hosking's condemnation of "Venetian" or three-light windows.

Whatever may be our conclusions on the subject of sculpture in pediments, there can be no doubt as to those of Mr. Leeds on that of statues on the summit of a building. He would place good sculpture where it can be seen, say in a niche, where it is framed in, and relieved by background of shadow, not seen against the sky, as well as foreshortened from below. He somewhat overestimates, in this, the force of his argument: the case is not quite like that of a statue with a window as background. We might refer him to the effect of the group on the eastern pediment of Covent Garden Market. Could anything better be substituted, considering the slight distance from the spectator, and the background as generally or in whatever sort of weather? Vase-forms, or pinnacles, which might be designed,—though we must say, not even Barry quite succeeded,—Mr. Leeds prefers to statues. The niche, scarcely known to the Greeks, he remarks was a happy invention; and he shows that it is capable of great variety of treatment, and of being made to contribute largely to internal effect.

Chambers's treatise is rather deficient in matter relating to interiors. Mr. Leeds gives one of his longest notes to ceilings and ceiling-fenestration, which last he rightly regards as a hopeful source of future effect. The difficulty in getting balance to windows which are on one side only of a room, is certainly considerable. We should agree with him, that art of the first class may be thrown away when the ceiling is treated as a picture. Even the French, whose recent architectural productions would have served Mr. Leeds in some of his arguments, have not yet learned to avoid the mistake of the old masters. But we have seen many a ceiling, as in French *cafés*, painted as a sky, and sometimes with birds flying, which we were not disposed to wish otherwise treated. Such cases, where there is no imitation of balusters or other architecture, and no chandelier, are distinct from those painted with historical subjects. How far he may agree with us, we cannot stop to consider. He is a great admirer of Soane's talent in interiors, as exhibited in the house in Lincoln's Inn-fields, where one room has a *velar* ceiling, — or one domical over a square plan, and having what would be the diameter or span of the perfect dome corresponding with the diagonal of the square,—the springing of the dome or pendentives being in this case, from the floor.

The author of these notes has not omitted to show how much he dissents from many of the architectural tendencies of the day, such as the "rampant Gothicism," "which seems to affect, as its characteristic, the veriest *sans-culottism* in regard to architectural design and composition." "The

very fact" of the Anglo-Classic, or Anglo-Italian, "being anti-Mediæval in character," he says, "ought to recommend it to us all the more, since all our social sympathies, and feelings, and tastes, are enlisted on the side of Modernism, in opposition to Mediævalism;" whilst it does not follow because further advance in a style has not been attempted, that such advance is impossible: we should be rather pleased to see that so much is left to be done that has been overlooked. He thinks it remarkable that Italian-Gothic should have been taken into especial favour by those who object to Italian Classic. Objection on the score of foreign origin surely applies to a Gothic which is decidedly inferior to that of our own country, and in which verticality and the gable are not strongly marked. The gradual lowering of the arch in the apertures of domestic buildings, till at length it was discarded for the square-head, more accordant with horizontal ceilings, he deems worthy of notice. Symmetry, and the evidence of artist-mind, are necessary in fine-art architecture; and these he does not recognize in the irregularity of the Gothic. It may be difficult to reconcile such requirements of external design with those of internal plan; but such difficulties may lead to happy results; and at any rate, if external design is to give way, we have, he says, a right to expect that the *planning* shall not be the mere tacking together of room to room, which is the best that can be said of the distribution of more than one recently-erected large country mansion.

NEW MATERIALS FOR THE LIFE OF JOHN FLAXMAN.*

I NOW give *entire* the valuable annotations of Flaxman's sister-in-law (Miss Maria Denman) on my father's Life of Flaxman. I need hardly add that Miss Maria's criticisms and additions appear in print for the first time:—

Page 275. Mr. Flaxman was of a quick and hasty temper when young, as well as of an enthusiastic mind; but corrected by good sense and sound judgment when grown to manhood.

Page 276. He never was under the direction of Mr. Roubiliac, or any one else.

Page 277. Mr. Flaxman befriended Blake, as well as many others, but without being assisted by any one, besides recommending him to many of his friends.

I believe the story about the crutches to be an entire fabrication: he was always reckoned a delicate and weak child, but not *infirm*.

Page 279. The noble lord, who lacks both sense and good feeling, shows the narrowness of his own mind by endeavouring to turn into ridicule this high-minded and talented man, whom he found so much his superior, and whose worth he could not understand. He has conjured up this story from some very trifling occurrence (having just wit enough for this), in order to gain that attention, when a draft on his own resources would not have been honoured. Mr. Flaxman was as free from *personal* vanity as any man living.

Page 279. *This story of Mortimer's is wrongly told.*

Young Flaxman was receiving lessons in drawing at school. One evening, a friend coming in, the lad showed him a copy of an eye he had been making from a drawing by his master, when this friend asked him "if it was a flat-fish?" This jest gave the youth so mean an opinion of his master's abilities, that he could not be prevailed upon to take any more lessons. Nor do I think *Mortimer* was the friend.

Page 281. Mr. Flaxman was a good Greek, as well as Latin and Italian scholar, and was not a bad French scholar, though he did not speak it well. He always made his designs from the original text, unless he had to compose subjects to accompany translations.

Page 282. It was the year after his death that the statue of Kemble was exhibited at the Royal Academy.

Note to page 282. The three small busts of Mr. Flaxman, sen., Mr. Howard, and Mr. Hayley, were modelled soon after Mr. Flaxman came from Italy.

Page 285. Conceit was never the characteristic part of his character. There seems but little knowledge, judgment, justice, or foresight in the Academy at this time in this affair.

Page 290. There was nothing like despondency in his composition,—quite the reverse. Courtship and matrimony rather doubled his diligence than retarded it. Mrs. Flaxman never called her husband "John" in her life; it was "Flaxman;" nor did he ever call her "Ann" (this mode of speaking of them totally changes their character); it was either "my love," or "my dear Nancy."

Page 292. *You must be careful how you quote [Nollekens] Smith;*—he had too coarse a mind to understand Mr. Flaxman's ways, and knew very, very little of Mr. Flaxman's affairs. Mr. Flaxman never was a collector of water-rates,—at least, I never heard it; but I do know that he scrupulously avoided all parish business throughout his life. The ink-bottle story, as well as many more that he and others have related, must belong to some one else.

Page 293. The monument to Collins was executed in 1795; consequently, not till after Mr. Flaxman's return from abroad.

The group of Venus and Cupid was not his favourite work: the poet Collins and Miss Cromwell were.

Page 296. It is not true that he transcribed subjects from the Greek vases, for his Homeric works; this was done in part for what he did for Mr. Wedgwood.

Page 303. The *group of Athamas** was, by some unaccountable accident, lost sight of for many years. Nor did it come to England till within these few years, when it was purchased by the present Lord Bristol, and sent to Ickworth.

The restoration of the group of *Hercules and Hebe* was an order from the late Mr. Thomas Hope. Mr. Flaxman never approved of it himself after it was finished; therefore he refused to work it in marble, *though pressed to do so by Mr. Hope;* nevertheless it was a general and a deserved favourite of *all* who saw it; and it is greatly to be regretted that it was destroyed. This you would have said had you ever seen it.

Page 321. The basso relievo of "Christ raising the daughter of Jairus," was designed for a monument to the memory of a young lady in 1822.

Page 321. "Feed the hungry," and "Comfort and help the weak-hearted," were also of a much later date.

Page 322. It is not till after an artist has been elected an Academician that he is expected to present to the Royal Academy a specimen of his art.

I no not understand the drift of your tailor story in this place. It seems to me what the painters call "out of keeping."

Mr. Flaxman did not desire to be employed on national works. He infinitely preferred the employ of private individuals who had good sense enough to leave the artist to his own taste and judgment, which is not always the case with committees. But on this occasion, Mr. Flaxman, with other artists, both sculptors and architects, were called upon to make designs for a national monument. He not only made a model of *Britannia Triumphant*, but two other designs, one a triumphal arch, the other a naval pillar, besides writing the letter you speak of; but, at the request of the committee, in this act he was not singular. Other artists did the same, and when they were all brought together in one room they formed a very interesting exhibition; and as a large subscription had been raised, it was thought something would be done. But as you say [p. 323], "The *committee deliberated* and dined, as committees generally do, and then as deliberately let the *money* as well as the matter drop;" but whether into their own pockets or any other strong box, remains a secret to this day. On this subject history is silent!!! and there this matter ended. Nor did the failure of this plan grieve *Mr. Flaxman*, except in a national point of view, for it had taken up much of his valuable time from more important business, and the *remarks you have quoted* my brother might well smile at—they are such as envy flings at superior merit.

Mr. Flaxman did not execute the monument to Walker and Beckett.

The *statue of Earl Howe* was purposely left unfinished, in order that it might be finished working in the light it was to remain in, which was very different to that in his own study.

And with respect to national monuments, we ought to take into consideration how artists are tied down by the commonplace notions of committee-men who are, on these occasions, lord and master.

Page 326. "It was the practice of this eminent artist to work in marbles from half-sized models." This was not altogether the case, and when he did it was from necessity, and not by choice. All his early works were modelled *full size*, as well as many of his latter ones. The whole of *Lord Mansfield's monument*, for instance, and others of the same period, were modelled full size; and only those that required a greater height than he had in his own study were modelled half-size, and that on account of not getting false perspective by looking down on the work; nor did he do it to save expense: so much was he the other way given, that I have known him to add in one instance only marble and work to the amount of 200*l.* when he thought it would improve the composition, and that at his own certain loss; and his mode of having his models put together was precisely the same as you recommend.

Page 353. Mr. Flaxman did *not* select from Pope or any other translator, but composed and designed his Shield of Achilles *entirely* from the *original Greek text. It is a very great error to say "he was not a good Greek scholar."* The subjects on the shield (which are seven in number) are continued without any visible division. The faint waving lines you speak of are only the seams, unavoidable in a cast from a piece-mould, and which on my cast I would not have removed.

Page 355. *Kemble* is in the character of Cato.

Page 355. *The statue of Burns* was to be a portrait of the man. Considering this, I think he is made as good-looking a youth as the subject would allow. The first sketch that was made for the statue I think was very preferable: so thought Mr. F.; but that was rejected as not being like the man.

Page 357. *Mr. Flaxman* had the highest regard and friendship for Mr. Howard, both as an artist and a man; but *his old friend Stothard* he could only admire as an artist.

Page 361. "Flaxman usually rose at eight o'clock,—breakfasted at nine," &c. Mr. Flaxman was always a remarkable early riser. He usually rose at six or soon after, and frequently much sooner; he was mostly up first in the house, and generally first in his study; he mostly breakfasted at eight, and sometimes much sooner.

Page 357. The visitor with his book I received myself one morning, my brother being out.

Page 358. Mr. Flaxman had taken a most violent cold at a friend's house. He had medical assistance; he was a most dreadful sufferer for the last three days, which he endured with a saint-like fortitude to the latest moment of his earthly existence, which was terminated in my arms; nor did he ever wish or ever have other attendance than what he received from her whom he and his wife had adopted as their daughter in her early life. His sister, Miss Flaxman, had lived comparatively but a short time with them, and that till latterly only as a visitor.

On his Wife's *sister* only devolved all the duties and cares of his family, not only after, but long before the loss of this most inestimable wife, and between Miss Flaxman and myself subsisted the strongest and warmest friendship.—*From Miss Maria Denman.*

Flaxman made two standing statues (portrait-statues without accessories), and two only. Their influence upon Chantrey was immediate and lasting. I refer to the bronze Sir John Moore (of Corunna) in the open air in Glasgow, and to the marble Sir Joshua Reynolds in St. Paul's Cathedral. Careful casts of these fine statues should be added *at once* to the Flaxman Gallery in University College, London: they would add to Flaxman's reputation, and assist materially in explaining the scope and characteristics of his genius.

PETER CUNNINGHAM.

* Concluded from p. 38, *ante*.

* The Fury of Athamas, a group of four figures above the natural size, executed for the Bishop of Bury, at Rome, price 600*l.*

MANUFACTURES IN METAL.

THE jury report on Class 31 of the International Exhibition is one of the longest and, we may add, most complete of those issued. Mr. Alfred Tylor, who drew it up, has in the course of it given some observations on the effect of the patent laws, the influence of architects in improving the quality and design of articles in metal, and has treated at some length of the education of those classes who are engaged in manufacture, at the express wish, it seems, of some of the foreign members of the jury, who propose to translate his report for the benefit of their respective countries.

We give a few paragraphs from the report, and note that it is published separately by Bell & Daldy.

Bronzes.—"The Japanese and Chinese bronzes show great perfection of workmanship. There are numerous specimens from Japan, in which the moulding operation is accomplished by inclosing a real basket in sand and then burning out the wood. When the molten metal is poured in it fills the mould, and becomes solid where it touches the sand first. The remainder of the melted metal is poured out as soon as the bronze basket is of

sufficient thickness, as is the case when plaster casts are made.

These imitations of natural objects in cast bronze are certainly in advance of anything old or new that has been produced in Europe. In the castings from baskets made of plaited grass the structure of the leaves is quite visible. Where the shape of the basket is simple, either with a wide aperture or with a false bottom, as in some specimens, the ashes might have been blown out of the sand mould after the basket had been carbonized; but this could not be done with the delicate handles of basket-work projecting from the baskets. The handles must have been cast first by the same process, or perhaps twisted and plaited out of strips of bronze. In one specimen I purchased, the bronze or copper wire which fastened on the metal handles to the wicker basket previous to moulding still remains, but of course burnt in, as the union of a piece of cold metal with metal in a state of fusion is termed.

This helps us to understand the manner in which insects with their extremities, and tortoises, are cast on the exterior of the basket, as in some specimens purchased by Mr. Moffatt, M.P., and I think General Malcolm. The insect or tortoise must have been cast either by the *cire-perdu* process, first in wax and then attached to the grass basket, and then moulded, and the woody matter and wax got rid of by heat and blowing; or the insect and tortoise must have been moulded in sand, heated, and then the animal and mineral matter blown away, then cast in bronze, and then attached to the grass basket to be moulded; the heated metal uniting with the cold in the sand-mould, and connecting the insect with the basket without any appearance of a joint.

It would be interesting to learn something of the antiquity of this process, which is the analogue of the cire-perdu process mentioned by Celliui, but superior in that the basket is a harder material than the wax, and would therefore bear more pressure without losing its shape. The grotesque figures of iron and bronze in the same collection are said to be of great antiquity—perhaps older than those forms employed by the Gothic architects.

Eastern patterns in woven goods seem to have spread centuries ago to such distant points, and to have remained up to the present time in general use. The Venetian glass and woven wire-work are now known to have had an Eastern origin; so that we can hardly see anything which assimilates to an Eastern form without imagining it is a copy, and not an original production of the Western land we find it in.

Zinc Bronzes.—The first cost of the plaster model and the metal moulds required for such imitation bronzes is of course considerable. Zinc figures are cast in metal moulds (which take to pieces), generally in several parts. These parts are soldered together with soft solder, and then galvanized and bronzed, and cost very little for wages and material—perhaps not one-fourth of the price of real bronze. They have formed an important branch of commerce, and spread many good examples of tasteful metal-work amongst a class who have not the means of purchasing more expensive works. The imitation cannot compete in quality with the real bronze; because, however well cast the zincs may be, they have the appearance of moulded works, the surfaces being left from the mould, and only the joints repaired; while the real bronze, touched in every part by the hand of the skilful chaser, has a life and vigour which the cultivated amateur can appreciate.

Electrotypes.—Among the French bronzes are some excellent exhibitions of galvano-plastique, or electrotyped copper, bronzed and silvered. The application of this beautiful process is attended with several difficulties which limit its application. An under-cut pattern cannot be electrotyped except in a mould of gelatine or some elastic material, because of the partings of the mould being apparent. Gutta-percha coated with plumbago is the material now employed. Some beautiful examples of the perfection of detail obtained by electrotyping may be met with in the exhibits of Christofle and Lionnet.

An ingenious plan is adopted to strengthen the thin material which is too light for use when taken from the battery, viz.,—by melting brass wire with a blowpipe and dropping it into the interior of the electrotype like sealing-wax, so as to give the requisite solidity. This process is peculiarly applicable to *appliqués* ornaments for furniture where flat ornamentation is permitted, and where delicacy of detail is required without undercutting or false coring; but at present, although it is easy to throw down by electricity a surface of brass on the copper, yet the surface cannot be lacquered so as to keep its colour. This happens because the brass has to be brightened by dipping in acid previous to lacquering, and a portion of the acid remains in the interstices of the crystalline deposit and oxidizes the brass in a few days, so that the surface below the transparent lacquer assumes a dark-brown colour. This renders the cheap process of laequering inapplicable; and gilding, which costs twenty times as much, must be employed. If any plan could be discovered of lacquering electro deposits instead of gilding them, we might hope to see a particular kind of very highly-finished ornamental brass-work produced at a very low price. The master-pieces of chasing and repoussé work can be reproduced by the electro process, so that copies could only be detected from the originals by the aid of a microscope, and might be multiplied in metal as perfectly as impressions from an engraved plate are transferred to paper, giving delight and instruction to the public."

Iron Gates.—"The gates exhibited by Messrs. Hardman, of Birmingham, are, as a piece of pure wrought-iron work, as fine as anything in this class. The construction is very simple, consisting of wrought bars decorated with mouldings; the enrichments being formed of pierced plates of iron filling up forms marked out by slender bent scrolls, in which are again laid conventional imitations of foliage. No other metal or material is introduced, and no part of it is painted. As a specimen of iron work in the style of the fifteenth century, this work is not surpassed. The same grace and refinement that characterize this work are also seen in many of the smaller objects exhibited by Messrs. Hardman.

Messrs. Barnard & Bishop, of Norwich, exhibit some gates intended for the entrance to the bishop's palace. The piers are of cast iron, and the gates are enriched with imitations of natural flowers and leaves scattered in great profusion over the whole of the spaces between the bars. Whilst recognizing the labour bestowed on these gates, we must express our opinion that had they been designed by an artist more conversant with the many noble examples of metal work that are to be found in all parts of Europe, many mistakes would have been avoided, both in conception and mode of execution; and a greater effect produced with less expenditure of labour, and therefore cost,—a result always aimed at by the true artist, as one of his most important duties. The substance of iron out of which these decorations are formed is so excessively thin, and has been treated in such a manner, that we fear the gates will soon be injured, placed as they are to be in the open air, and in a position where they may be exposed to damage by violence."

Reproduction of Mediæval Work.—"We have an instance in the rapid improvement of Mediæval work, how soon an industry answers to the demands made upon it when money is forthcoming on the part of the public, and a guiding hand is applied by the architect. To this learned profession the Mediæval work of England is indebted for its regeneration. The bronze trade of France took its rise also under the direction of the architects of the royal palaces, and we may look for similar improvement in every branch of ornamental decoration when architects have funds at their disposal and take the trouble to direct the manufacturers and workmen, as it has been once in England, and as it was in the best days of Italy, when the architect was also sculptor, and did not disdain the complete mastery of the details of every branch of his profession.

The mechanical processes by which all this group of works have been formed do not materially differ, whatever may be the style or character of fine art that the producer may have given them, and are very simple. The metal, being first forged into bars or plates of greater or less substance and size, is then worked by the hammer into the forms required; the decorations being added to the essential and merely useful part of the object, principally by means of scrolls or applied ornaments, beaten out by the hammer and engraved on the surface; so that it will be better to consider these works in subdivisions, suggested rather by their decorative than mechanical distinctions.

The most striking peculiarity observed at first sight is, that the whole of the objects exhibited, with very few exceptions, present marked signs of their origin, and are separable into two great divisions—those that have for their type the works of the Middle Ages, and those which followed the forms of art which prevailed in Italy in the seventeenth and eighteenth centuries. To enter upon the question of this obvious imitation, and to inquire whether it proceeds from a general demand for works only in particular styles of art, or whether from the want of power in the workman to produce original designs, seems to us foreign to the purpose of this report; but it may not be without service to ask those interested in the state of the decorative arts in this country, and who are engaged in promoting their advancement, to give their attention to the fact. To compare works of this nature in such very different styles would lead to discussions which would be out of place here.

We may remark that the artists among the Greeks succeeded in producing their best effects by the most simple ornamentation. The Mediæval artists worked in just the opposite direction.

The Mediæval works consist of objects, for the most part, made for ecclesiastical use, and intended to be placed near the eye, which must be borne in mind in remarking on the skill with which decorations are applied, and the high finish and great delicacy of most of their details. It is gratifying to find that although in the Exhibition of 1851 some of the metal work shown may have been as highly finished as any produced on this occasion, yet there is a marked advance in the power of applying the resources of the art to accomplish the ends in view, and a greater boldness in the use of forms imitative of natural objects, without any falling off in the care with which the works are finished, or the labour bestowed in ornamenting them. Colour, which scarcely made its appearance in 1851, as applied to metal work, is now frequently used, either in a general painting of the whole surface, or in enamels, or by means of metals of different kinds, mingled with crystals and precious stones in the same object—modes of decoration very legitimate as applied to works in metal, and which it is hoped may be more extensively used in future."

"It is necessary for the skilled mechanic to be himself instructed in art, and the manufacturer must have the requisite knowledge, or seek the assistance of those who have received a sound education in it, to be able to produce with propriety and beauty any work he is called upon to produce.

Coarse, ugly, or feeble attempts at ornamentation,—for which English manufacturers have been so often justly condemned, and which the workmen of continental nations have been so much more successful in avoiding,—arise from a want of artistic knowledge on the part of masters and workmen; and we would urge upon those who are able to influence the producers of manufactured articles, either as having an especial acquaintance with the art of ornamental design, or merely as purchasers in the market, to demand that propriety and refinement of ornamentation shall be essential characteristics of all works on which even the least decoration is bestowed. The employment of artists skilled in design, and of mechanics who have sufficient knowledge of art to enable them to execute works designed for them without destroying their beauty of form or expression, would inevitably follow on the demand being increased for really appropriate decoration; and the works now requiring the assistance of foreign artists would in time find skilled workmen amongst our own people, fitted for the production of the finest subjects."

PHOTOGRAPHY EDUCATIONALLY APPLIED TO THE MAGIC LANTERN.

AN interesting and important practical paper was read by Mr. Samuel Highley, F.C.S., at the Society of Arts, Adelphi, on the 14th instant, on this subject. The paper was illustrated by various diagrams of convenient apparatus for lecturers and other teachers, whereby photography may be made more readily and efficiently applicable to educational purposes. Mr. Highley also exhibited, on a large screen, an extensive series of lantern views of scientific subjects, illustrative of the application of photography to the representation of geological, botanical, zoological, microscopical, astronomical, geographical, ethnological, biographical, and pathological subjects; and afterwards examples of the representations of the artistic works of Kaulbach, Schnorr, and Hogarth; together with groups of sculpture, as well as some specimens furnished by Mr. Charles Jones.

Towards the conclusion of his paper Mr. Highley made the following remarks:—

The advantages I claim, then, for magic lantern views over those in general use, when educational value is aimed at, are delineations truthful to nature and abounding in detail, cheapness, compactness, as compared with paper diagrams, and their utility in museums, when not in use for their legitimate purposes.

Beyond the department I have specially dwelt upon this evening, I may say a few words upon the educational value of stereographs, but only a few words, for every one must have felt their value; though unfortunately they have never been published in a systematic form so as to give them a true value for the purposes of scientific instruction; but, if systematically produced, the schoolmaster, the provincial lecturer, and the professor of natural history, might bring many unique specimens, scattered through the museums of the world, within the ken of their pupils: in fact, the treasures of our British Museum might be carried in a professor's coat pocket. Such productions ought to be accompanied by descriptive letterpress; and this leads me to the application of photography to book illustration.

I was one of the first—I believe *the* first—who applied photography in this direction,* but I feel bound to state that we can never look to the present method of producing photographic prints, if we wish to apply the art to the purposes of book-illustration, for the cost of each print is too great for popular educational adaptation; but there is a method to which I look with hope, viz., the photo-galvanographic process of Paul Pretsch. By this invention the counterpart of wood blocks can be produced from a photograph negative; and every publisher will, I think, back my assertion that this is the right and principal direction in which experiments should work; and I trust to see the day when Paul Pretsch's unwearied labours will, as they deserve to, be crowned with complete success.

In conclusion, I would say that every exploring expedition should be accompanied by its official photographer; that every national museum, observatory, and hospital should have its appointed operator; and then the hoped-for time may come when we can, in systematic manner, place the records of scientific travel, the transcripts of Nature's treasures, and the history of the progress of fell disease, upon the screens of our lecture theatres, the stereographs of our cabinets, and the pages of the books in our libraries."

PARIS.

THE interior arrangements of the new buildings for the Library of the Arsenal, and the restoration of the older structure, continue to be carried on without interrupting the service of the establishment. The works are at present confined to the façade of the Rue de Sully, which is being thoroughly pointed and repaired in the same manner as the rest of the building, now completely renewed.

Before the Revolution the Arsenal was divided into two portions, the "Grand" and the "Petit;" the latter exists entire at the present time, and is occupied for the manufacture of gunpowder and saltpetre: as to the former, nothing remains of it but the buildings of the Library of the Caserne de Sully. This establishment, which was in the time of Louis XIV. the most important of the kingdom, dates from François I., who converted it into a foundry of ordnance, and made use of storehouses, which he borrowed from the town of Paris, but never gave back. Under Henry II., saltpetre mills and various constructions for the artillery service were erected, but they were blown up by the explosion of 20,000 lb. of powder in January, 1562, in the time of Charles IX. These buildings were immediately reconstructed on the same spot, and subsequently Louis XIV. ordered the building of the Petit Arsenal. The Rue de l'Orme, the Rue de Sully, and the Place de l'Arsenal were then interior courts: on the Quai Bourdon and the site of the *Greniers de Réserve*, were the gardens.

REMOVAL OF ST. THOMAS'S HOSPITAL.

ON Tuesday afternoon a meeting of the governors of St. Thomas's Hospital was held at the London Bridge Terminus Hotel, for the purpose of receiving a report from the Grand Committee relative to the removal of the hospital. Sir John Musgrove presided.

The report submitted stated at some length the nature of the various sites which had been approved of by the Grand Committee, namely, Bethlehem Hospital; the Fishmongers' land, Walworth; Surrey Gardens; land at the back of Newington Church; Myatt's Strawberry Ground, Camberwell New-road; and the Lambeth Thames Embankment, opposite the Houses of Parliament.

The architect of the hospital gives the following

Summary.

No.	Names.	Acreage.	Approximate Cost.	Rate per Acre.
1	Bethlehem	11	£160,000	£14,545
2	Fishmongers'	8	46,000	5,750
,,	Ditto, with addition of plots A, B, C, D	13	104,000	8,000
3	Surrey Gardens, including Manor Tavern ..	14½	77,500	5,345
4	Ditto, with additions of Penton and Canterbury Places	17	100,500	5,910
5	Land at the back of Newington Church..	..	no estimate.	—
6	Myatt's Ground	30	39,000	1,300
7	Thames Embankment	7	no estimate.	—

On the motion of Mr. Tite, seconded by the Treasurer, it was resolved, after a long discussion, that the report be received, and "that the several sites be referred back to the Grand Committee for further consideration, with a view to obtain more information in reference thereto, and to report thereon, as well as with respect to any other site which may present itself in the meanwhile, to the next meeting of the governors."

Little was said in favour of any of the sites. The site at the back of Newington Church (nothing being known of price), appeared to have the strongest advocate.

The wildest of the propositions is that which includes pulling down Bethlehem, rebuilding it on other land elsewhere, and erecting St. Thomas's Hospital on its present site.

In the course of the discussion, Dr. Leeson, who holds with us the opinion that the main establishment should be a little way out of town, said his worst fears as to the Surrey Gardens building had been realized. No case of burns had been admitted that had not proved fatal.

We sincerely hope that the committee will still look further afield for a site.

A GOVERNOR, known to many of our readers, addressed some observations to us last week, on the communication signed "I. H. E.," in a previous number; but these reached us too late then for insertion. Part of them may still be usefully printed, as regards the general question.

The vital point for decision is whether the hospital ought to be rebuilt on some site in near proximity to its former position in the heart of a thickly-populated district, or at such a reasonable distance from town as to combine the advantages of a pure atmosphere with efficient medical supervision.

In considering the first part of the subject, we must not overlook the stupendous change which London has undergone since the hospital was first erected on the side of a bright and pure river, and in a comparatively open district; nor its present rapid increase as regards size and population. We must bear in mind, too, that Guy's Hospital still remains for the wants of the locality as well as of the city, and that universal experience proves the necessity of salubrity of situation and pure air, even to the healthy; or why all the present vast expenditure in drainage and the embankment of the Thames, or the legislative enactments for the regulation of trade works, &c.? But I will not weary your readers by specifying unnecessarily objections which their own minds will suggest. I would rather point to the great fact that the medical officers attached to the hospital were so strongly convinced of the necessity of a change of locality, even before the extension of the railway was contemplated, that more than once they so reported their opinion to the governors; and upon the railway being proposed, they added the weight of their testimony to the fact that, if carried out, *the situation would be rendered totally unfit for the purposes of an hospital*; and this opinion, which they repeated before the Parliamentary Committee, applies, as I think, with equal force to any situation within a mile at least of the whole southern bank of the Thames, owing to the great increase of late years in manufacturing works of an unhealthy character, and the density of population.

I might almost rest my argument for the desirability of a change of situation on the words of "I. H. E." when, in advocating the beneficial effects of the limited opening formed by the railway, he says it would bring along in its course "a broad river of fresh country air up to the centre of the densest population, enabling many thousands to pass quickly and cheaply to their suburban homes." He discourses eloquently and well of the great good of the railway lifting the poor from the alley and the court to more favoured positions, and of others to Blackheath or Lewisham.

With such right appreciations, I hope to receive his aid in the endeavour to secure to the suffering patients of St. Thomas's the fullest possible advantage of pure air; adding to it the quiet and retirement which a removal to some convenient locality in the adjacent country would so gratefully afford.

To remove some of the probable objections to the change, I would suggest an auxiliary hospital of moderate dimensions in St. George's-fields for the reception of accidents and cases of extreme urgency.

Admitting the importance of an hospital as a school of medicine; still that consideration must be subservient to the welfare of the patients. But it would, perhaps, be to the advantage of medical students even to spend a portion of their time in the country. The known liberality of the profession would prevent the hospital losing the advantages of the highest medical and surgical skill. The anatomical school should be altogether separated from the hospital. The removal of this blot from our great hospitals would tend greatly to their popularity and the mental quiet of the inmates. It may be remarked that a small proportion only of the patients of old St. Thomas's belonged to the neighbourhood: they mostly came from the country districts; showing that the removal to some situation out of town would not lessen the utility of the establishment.

I close my remarks with the sincere hope that all will weigh the subject apart from every prejudice, and with the single aim to benefit the poor and suffering patient, and to restore him as quickly as possible to health and strength.

Norbury Park. T. GRISSELL.

STAMPED ZINC WORK.

WE are asked to say that the plates of zinc and ornamental stamped zinc-work mentioned in our notice of the new warehouse in Bow Churchyard (p. 49, *ante*),* were executed by Mr. J. W. Tyler, of Wood-street, Westminster, who also executed the noticeable zinc roof, with dormers, in Piccadilly, nearly adjoining the late Mr. H. T. Hope's mansion. The latter was done under the direction of Mr. James Edmeston, by whom, indeed, the stamped zinc-work has been mainly introduced here. In Paris about 2,500 tons of zinc are now used annually for stamped ornament.

INSTITUTE OF ARCHITECTS.

THE extent to which one or two members of a government, parish vestry, or society's council, can commit their colleagues, and render them ridiculous, would be remarkable if it were not common. This was felt pretty strongly at the Institute on Monday evening, when a meeting was held to consider the recent foolish regulations to shut out reporters and prevent the publication in the journals of papers read at the Institute,—regulations passed in the dog-days, as we have been told, by a very small minority of a new council.

The president, on Monday, perhaps expressed the views of the majority present, when he said that, if he had been at the meeting of council, he would have opposed the measures: the principle involved was on the face of it unpopular in England; but, as the authors of them had taken trouble on the subject, he would give them a trial. At all events, after a discursive conversation, which, like the whole affair, has been aptly described by an old member as a "muddle," the regulations are to be allowed to stand. The reasons and apologies offered for them were, we are bound to add, of the weakest description: the real origin was kept out of view. The Institute has been much damaged by the transaction; but we have neither space nor inclination at this moment to speak further of it.

GLASGOW ARCHITECTURAL SOCIETY.

AT the last meeting of this Society, Mr. Alex. Thomson, the president, in the chair,

Mr. Jas. Boucher brought forward the following motion, of which he had previously given notice:—

"That it is the duty of this Society to watch over all public competitions which may take place in this city and neighbourhood, in order that the terms or conditions may be faithfully carried out, and any infringement of the same by the competitors or promotors of such competition be brought under the notice of this Society."

* The *Builder*, we believe, was the first to suggest the illustration of books by photography.

* The architects of this building were Messrs. Tress & Chambers,—not Chamberlain.

Mr. T. Gildard seconded the motion, and commented at some length on recent doings with reference to the Wallace competition.

Mr. Stevenson suggested that, by way of giving the resolution a more practical shape, it should comprise instructions to the Council of the Society to watch over all public competitions.

Mr. Boucher adopted the suggestion, and accordingly the following words were added to his resolution: "And it is accordingly remitted to the Council to carry out the object in view."

The resolution, with this addendum, was unanimously adopted.

Mr. Wm. M'Adam afterwards read a paper on "Imperishable Material applied to Sash and other Pulleys, Economical Sash-weights, and Improved Methods of Hanging Windows." The material proposed by Mr. M'Adam for pulleys is vitrified stoneware, which has the advantage of being proof against the destructive action of the weather. For window-weights he substitutes a cheap material manufactured out of various kinds of refuse; and he suggests an improvement in the mode of hanging windows whereby one weight can be made to answer the same purposes as two applied in the usual way.

NORTHERN ARCHITECTURAL ASSOCIATION.

THE fourth annual meeting of this Association was held in the Old Castle, Newcastle, on Tuesday, the 13th instant. The chair was taken by Mr. Thomas Austin, Vice-President of the Association. The report having been read by Mr. Oliver, showing a balance of 10*l.* 17*s.* 2*d*, in the hands of the treasurer,

On the motion of Mr. F. R. Wilson, seconded by Mr. R. J. Johnson, the report was adopted.

The chairman then read an address. In this he reviewed the proceedings of the Association. In the course of it he said,—"We have found the scale of charges drawn up and sanctioned by this society most valuable to us in our practice, reference to it being, in most cases, decisive in questions of remuneration. The scale of charges recently issued by the Institute of British Architects is a most valuable one, coming from so high an authority. It is singularly corroborative of the justness of the decisions at which we ourselves had arrived; and I may here remark that it is unsatisfactory in the same degree as our own in the question of charges for valuations. Neither our scale nor that of the Institute provides satisfactorily for the remuneration of a class of valuations, which are with us a matter of constant occurrence. I refer to valuations of house property, as guides in cases of mortgage or sale.* I can only infer that in London this is not a part of an architect's practice (the division of labour in London being more marked than in the provinces); but throughout the provinces this is a very common, and I may say, important part of an architect's duty. I think that a revision of these charges in our scale is desirable."

Thanks were voted to the chairman and Mr. Pritchett for the manner in which they had represented the Association at the Architectural Alliance meeting in London.

INSTITUTION OF CIVIL ENGINEERS.

ON January 13th, the paper read was "On Railway Telegraphs, and the Application of Electricity to the Signalling and Working of Trains," by Mr. W. H. Preece, who discussed the various systems that had been introduced in working long tunnels, single lines, steep inclines, &c.

The first application was that of Mr. Cook, the original introducer of the electric telegraph into practical use for railway and commercial purposes. He suggested and established on the Eastern Counties Railway, between Norwich and Yarmouth, in 1844, what was now known as the "block" system.

Mr. Edwin Clark perfected the scheme of Mr. Cooke, in the system he introduced upon the London and North-Western Railway, which was fully described. The needle instrument was employed, but its indications were made permanent by the use of continuous currents of electricity. It not only showed when the line was clear, and when there was a train on the line, but also the occurrence of an accident.

The advantages and disadvantages of speaking telegraphs in connexion with signalling apparatus were considered; and it was maintained that a speaking telegraph should never form a portion of a signalling system, but be a separate and independent agent.

The danger of using the telegraph as a medium of conversation, without carefully writing down everything sent and received, and the necessity of repeating every important message, were adverted to. The use of record-books, as a check upon the telegraph, was also advised. The method of working single lines by telegraph was then discussed. It was argued that single lines, properly worked, would be sufficient to meet a great portion of the traffic of this country; and that large sums of money had been uselessly expended, in consequence of Parliament compelling railway companies to make double lines where a single line would have been ample for the requirements of the district. This had been owing to the absence of a reliable signalling apparatus, and the want of confidence in, or knowledge of, the telegraph by railway managers.

* See a letter on this same point in our present number. ED.

WATER SUPPLY OF TOWNS.

AT a recent meeting of the Manchester Literary and Philosophical Society, a paper was read by Mr. Edward Hull, B.A., on "The New Red Sandstone and Permian Formations as Sources of Water Supply for Towns." The paper commenced by pointing to the advantage enjoyed by most of the large towns of the central counties from their geological position, when built on the new red sandstone. First, from being in proximity to coal; second, from having a dry foundation; third, from having easy access to building-stone; and, fourth, from the fact of their resting upon natural reservoirs of water stored up in the sandstone itself.

The author considered that many of these towns had not taken full advantage of this last-named source of water-supply, partly from a distrust of the resources of the rock, and partly from the failure sometimes sustained in consequence of the positions for the wells having been selected without a proper regard to the geological structure of the country.

The author referred to the failure of the attempts to obtain fresh water at Rugby, and a sufficient supply at Wolverhampton; and he maintained that an abundant supply might have been found at the latter town had the position for the well been selected with due regard to the geological structure of the country.

The author then proceeded to lay down certain rules of general application for the selection of proper sites for wells, and illustrated the subject by reference to a well now being sunk under his direction at Whitmore, for the supply of the railway works and town of Crewe. The position of the well is in a *trough*, both geographically and topographically; and on a 4-inch bore-hole being sunk to a depth of 148 feet, the water ascended to the surface with a head of 4 feet, and has continued to flow without diminution for the last six months.

The well, which is being made within 100 yards of the bore-hole, has only reached a depth of 60 feet, but already yields 250,000 gallons per day.

SOCIETY FOR THE ENCOURAGEMENT OF THE FINE ARTS.

AT the meeting of the above society on Thursday evening, the 15th instant, at their rooms, in Conduit-street, Mr. Hurlstone, President of the Society of British Artists, read a paper "On the Drama and Poetry of Spain."

He commenced by observing that a French critic had said that all Spanish literature was comprised in "Don Quixote." Now, so far from being contained in one book, it was not only unsurpassed in copiousness and richness, but was stamped with a raciness and originality peculiarly its own. Besides the various works of Cervantes, he cited those of Calderon, the Spanish Shakspeare, and Lope de Vega, who is supposed to have written no fewer than 2,000 pieces, but of which only 300 are printed. After a scene from the early Spanish drama he selected those masterpieces of its best period which contrasted with the greatest dramas of other countries, such as the "Magico Prodigioso" of Calderon, with the "Hamlet" of Shakspeare, and the "Faust" of Goëthe; "La Cisma de Ingleterra" with "Henry VIII.," and "El Mayor Monstruo los Zelos" with "Othello." He then described the favourite types of character in the Spanish drama, and particularly dwelt upon that indispensable one, the *Gracioso*, who is a running satire upon the foibles of his master, and plays the same part in drama that Sancho Panza does in the romance. He divided the Spanish drama, not into tragedy and comedy, for it was a mixture of both, but into heroic dramas and those of the *Capa y espada* (cloak and sword, or dramas of intrigue), of which he gave specimens, and dwelt upon their irregularities, disregard for the unities, and habitual anachronisms. In treating of the "*Cisma*," he described the sacred processions which were connected with the "*Autos Sacramentales*," or sacred dramas, which were very splendid, and in which the figure of Anna Boleyn was prominent and indispensable, as being as much the symbolical embodiment of the hatred of Spanish Catholics to Protestants, as that of Guy Fawkes was at one time of the hatred of English Protestants to Catholics. Time admitting only a very short summary of the poetry of Spain, Mr. Hurlstone referred to the ancient romances and songs, the *Romanceros* and *Canciones*, the subsequent classical style of Mendoza, and the Lyrics and Pastorals of Boscan and Garcilasso; and concluded an able and singularly interesting lecture by alluding to the false taste the *cultismo* style of their latest poets, which is equivalent to our euphuism.

After a vote of thanks to the lecturer, an interesting discussion followed, and the evening terminated as it commenced, with an allusion to Don Quixote,—a gentleman, well versed in Spanish literature, maintaining that to become a *perfect* gentleman, a constant study of the life of that renowned *preux chevalier* was indispensable!

MEDICAL OFFICERS' ASSOCIATION.

AN ordinary meeting of the Metropolitan Association was held at Whitehall, on Saturday evening last; Dr. Thompson, of Marylebone, in the chair. Remarks were made upon the success of the Association in opposing the western drainage scheme of the Metropolitan Board; that body having the day previous rescinded its former resolution on this subject; so that the drainage of Chelsea, Fulham, and adjacent districts will be incorporated with the Main Drainage sewers instead of being thrown into the Thames, near Cremorne, as originally intended.

Dr. Milroy read a paper "On the choleraic visitation at the Central District Schools, Norwood, in 1853." Such were the suddenness and extent of attacks of cholera amongst the children, that a most rigid investigation of all the circumstances connected therewith was made. It appeared that though some causes of the visitation might be unknown, and others with difficulty traced, the great cause was *overcrowded sleeping-rooms*. This was proved by a comparison of figures into which it is not necessary now to enter. A discussion followed, during which it was observed, that more information was needed in regard to atmospheric influences in originating or aggravating epidemical outbreaks. The importance of spare dormitories or apartments, especially in connexion with large establishments, for isolating those attacked with disease, was particularly urged.

METROPOLITAN BOARD OF WORKS.

As we anticipated, the Board, at their last meeting, approved of the recommendation of their committee to rescind the resolution directing the formation of deodorizing works at Fulham. The sewage of the western area will therefore be carried into the low-level sewer, and the intercepting system be thus complete. The estimated additional cost will be about 200,000*l.*

The Board opened tenders for works to be constructed in Queen's-road, Dalston. They were as follows:—

Hill, Kendle, & Robinson	£2,200	0	0
Morris	2,100	0	0
Pearce	2,063	0	0
Kent	2,056	0	0
Scrivener & White	1,997	0	0
Blackmore	1,899	0	0
Bugbear	1,777	0	0
Rowe	1,759	0	0
F. & F. Wood	1,620	0	0
Dowell	1,599	0	0
Thirst	1,582	0	0
Dethick	1,495	0	0

The contract was given to Mr. Dethick, subject to the usual securities.

The District Surveyor of Newington was suspended for three months, and the District Surveyor of Bromley was censured, for "dereliction of duty."

DALHOUSIE INSTITUTE, CALCUTTA.—*Interior of the Great Hall.*

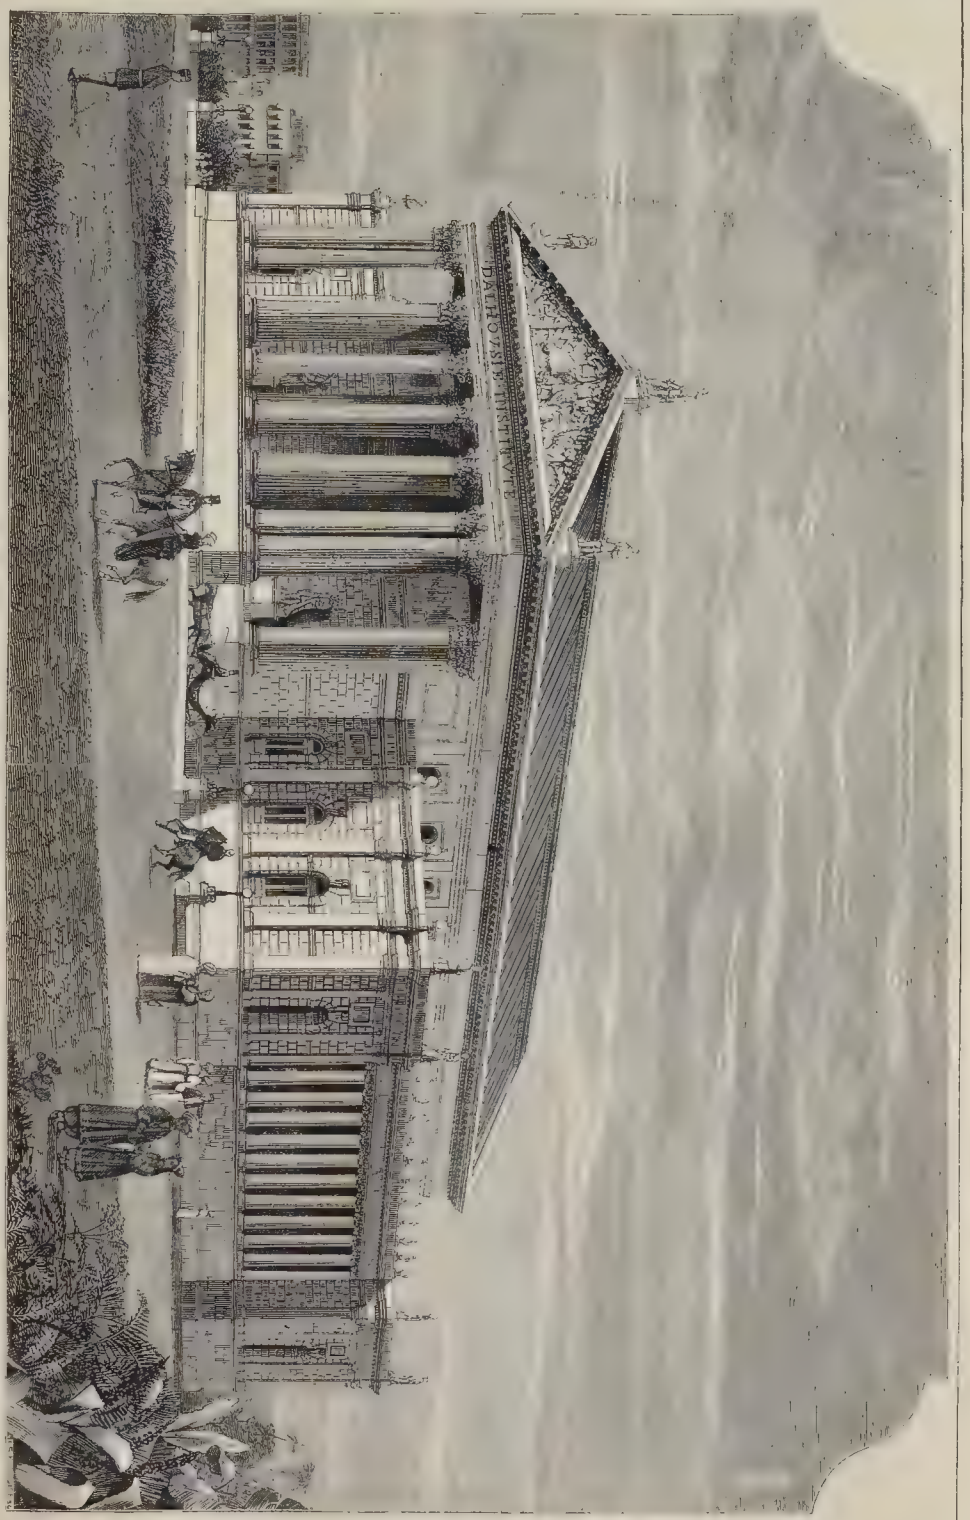
THE DALHOUSIE INSTITUTE, CALCUTTA.

In our last volume we mentioned that the first premium (300*l.*) had been awarded to Mr. C. G. Wray, architect, for his design for the Dalhousie Institute. We now give illustrations of the design. The Institute, as we stated at the time, is intended to cost 25,000*l.*, which sum has been collected. It is intended to be built on a site adjoining Government House. The large hall is to be used as a concert and public-meeting room, and will accommodate 1,000 persons seated. It is also to be appropriated to the reception of statues and other memorials of distinguished men. On either side of it are lecture-rooms, lavatories, and an extensive library. The design, externally, may be described as a Corinthian prostyle temple, octastylos; with a lower building, Ionic, on each side. The two outer columns on each side in the portico are close together, and the tympanum is filled with sculpture. Three statues take the place of acroteria on the pediment.

The great hall has single Corinthian columns with antæ projecting from the wall, on each side at intervals, and a vaulted ceiling, panelled, with lunettes above the entablature of the order. A recess at one end will receive an organ.

THE HUGHES PRINTING TELEGRAPH.

THE United Kingdom Telegraph Company are adopting Mr. Hughes's system. This instrument was first introduced in America as a time and labour saving apparatus. From America the apparatus travelled to France, through Great Britain. The advantages of the Hughes printing system are, that a single wave of electricity produces a letter, or numeral; whereas about three and a half are required for each Morse symbol, and some symbols require waves of long duration. Hence the greatly increased speed attained by the Hughes apparatus. This one wave, too, produces an ordinary printed letter instead of a cabalistic mark. The instrument prints at both ends of the wire simultaneously, so that the sending-clerk sees what he is forwarding. No copying or translating being required, as in other systems, the chance of error is avoided.



The electrical waves are transmitted by a revolving arm, carrying the segment of a circle as a contact-maker, and the arm revolves at the same speed in each apparatus as the type-wheel. When a key is pressed, a metal plate in connexion with the battery is forced upwards, and meets the contact-maker as it revolves, scrapes along its surface, the current passing the while, and is then thrown back by the contact-maker, and brought to its normal position of rest by a constant spring. The letters are printed while the type-wheel is in revolution, and the type-wheel is driven by friction, which allows of its being moved backwards or forwards by mechanical means.

In the face of the instrument there are twenty-eight keys, arranged like the keys of a piano. These twenty-eight keys correspond with twenty-eight metal pieces or plates, working upwards through slots formed all round a circular disc of metal; on the top of which, but not in connexion with it, the arm and contact maker revolve. The type-wheel and this arm revolve together; and when a key is depressed, a plate corresponding with the letter touched is raised. The position of this on the disc is such that, at the moment the arm and contact-maker touch the plate in their revolution, the corresponding letter on the type-wheel is over the printing-roller,—say at Birmingham and at London. The current instantaneously passing releases the printing-gear at both places, disengaging a detent: a cam driven by the clock-work train immediately presses the paper against the type-wheel, and a letter is printed; whilst, at the same instant, by a graduated movement, the paper is carried on a space, ready to receive the next impression.

The speed secured in France has reached, for days together, fifty messages and upwards per hour per wire, and from forty to fifty words per minute. In America, the apparatus is officially reported as performing upwards of forty words per minute; and at the office of the United Kingdom Company from thirty up to forty words per minute, and forty to forty-six messages, of average length, per hour per wire, have already been sent. The apparatus promises nearly to double the average performances of the Morse and needle instruments at present in use. There is a key-board attached to the instrument, on which the letters of the alphabet are placed: these correspond with the type-wheel, and each time a key is depressed a letter is printed. The key-board is identical with the key-board of a piano, and female operators are consequently found to be admirably adapted for the work.

The peculiarity of the United Kingdom Telegraph Company is that it conveys telegrams (why not "Tell'ems?") between any of their stations, irrespective of distance, at the uniform rate of one shilling for twenty words.

VOLUNTARY ARCHITECTURAL EXAMINATIONS.—Examiners and moderators have been elected in conformity with the regulations for conducting the voluntary architectural examinations for 1863, and twenty-one candidates have sent in their applications for examination; viz., nineteen in the class of Proficiency, and two in the class of Distinction.

DESIGN FOR THE DALHOUSIE INSTITUTE, CALCUTTA.—MR. C. G. WEAY, ARCHITECT.

ARCHED ROOFS AND FLOORS OF BUILDINGS.

THE use of brick arches tied in with iron rods, for floors and roofs, as patented by Mr. W. Clark, engineer to the Municipal Commissioners of Calcutta, appears to be extending in that city. The Calcutta *Engineers' Journal* gives an illustrated account of a house so built there, with rooms 20 feet wide covered by arches of one span. The outer walls are 2 feet 2 inches thick; the inner walls 1 foot 9 inches. The Calcutta and South-Eastern Railway, having made arrangements with Mr. Clark, are just now completing a building composed of three spans: its entire length is 126 feet: the centre arch is 42 feet span; rise 6 feet 6 inches to the height 40 feet. The two side compartments are each 40 feet span, 6 feet rise; thickness 10 inches.

The Government have also erected a spacious range of godowns, 400 feet in length, on the bank of the Circular Canal.

SCHOOLS OF ART.

The Worcester School.—The annual meetings of the friends and patrons of this school have just been held. At the evening meeting for the distribution of prizes, Lord Dudley, the president, occupied the chair. The report, which was read, stated that the school was progressing successfully. The annual inspection of the works of the students and examination were conducted on the 23rd and 24th of October, by Professor Hart, R.A., who awarded twenty-seven medals to students in the Worcester School, and nine to students in the Bromsgrove School, which was taught by the same masters as the Worcester School. The number of medals awarded was greater than on any previous occasion; and it was satisfactory to know that six of them were awarded for works in the highest class of study: three of these were for enamel painting. Awards of the second grade, to the number of thirty-three, were obtained by the Worcester, and to the number of four by the Bromsgrove School. These numbers were also higher than on any previous inspection. During the past year 261 students (13 more than in 1861) had received instruction in the Worcester School, 93 in the Bromsgrove, and 21 in the class at the Pershore Mechanics' Institution. The latter had only been in operation for three months in the year, and a similar class at Droitwich had been for a time discontinued. The total number of persons taught during the year amounted to 1,137; an increase of 73 on the total of the year before. At the close of the distribution his lordship addressed the meeting on the condition of the school, and in so doing said he was sure they would believe that he rose to perform that duty with greater pleasure than ordinary, inasmuch as there were more real signs of prosperity displayed this year in the prospects of the school than they had had to congratulate themselves on for some time past. There was room, however, for more originality in the school.—Though progressing, the Worcester School is not yet self-supporting. The local *Herald* states that it is at least 180*l.* a year under that as yet.

The Kidderminster School.—Several years ago a school of art was established in Kidderminster; but, after a few years of existence, the institution fell through, owing to the want of public support. Twelve months ago, however, the Earl of Dudley, on the occasion of a public meeting at Kidderminster, suggested the necessity of reviving the school, and pointed out its importance to the staple trade of the town. A stimulus having been given to the matter by his lordship's remarks, a meeting was held to consider the question, and this ended in the re-organization of the school. The success of this new effort has just been celebrated by holding the first annual meeting in the Music Hall, Kidderminster. There were about 1,000 persons present. The Earl of Dudley presided; and amongst those present were Lord Lyttelton and Lord Kingsale and party, the mayor, and many other influential persons. The report stated that the school had been in operation for three-quarters of a year on December 21st. The total number of persons who had been taught in or by its agency since its commencement (exclusive of private pupils), had been 520. Although the advantages of the central school had not yet been fully appreciated by the upper and middle classes, the steady increase of the number of artisan students might be considered fully to make up for any temporary discouragements in other respects. The latter class was attended by no less than fourteen artists engaged in the preparation of designs for the staple manufacture of the town. The master had also received applications from professional designers, which have led to the engagement of six of his junior students.

The Manchester School.—A *soirée* in connexion with this institution has been held in the rooms of the Royal Institution, when there was a large attendance of members and friends. A meeting was held in the theatre the same evening, the chair being taken by Mr. Bazley, M.P., the president. The chairman stated that the institution had felt the pressure of the times, and fewer paintings than usual had been sold. Help was needed to sustain them in disseminating the principles of correct design, and he did hope that the friends of education in art would not let it die for want of pecuniary assistance. Mr. Mückley, the master of the school, delivered an address, in which he described the best course for students of art to pursue. Mr. G. Wallis, formerly head master of the school, and now of the Science and Art Department, referred to some of the results of the late International Exhibition. He said it had shown a great progress made during eleven years, and had proved that Englishmen possessed a capacity for art. The progress which had been made had astonished our foreign friends, and the French jurors had made such reports to their Government as would, he believed, result in a complete change in the elementary system of art instruction in France. He had made inquiries and found three hundred and forty-one students of schools of art had been employed in the production of works shown at the late Exhibition. The names of these were returned by the employers, and many more had been employed of whom no return had been made at all. This was distinct evidence that students had been usefully employed in the manufactures of the country, and their works displayed the great advance which had been made in art during the last twenty years. In answer to Mr. Cobden, who wrote to inquire the opinion of his French friends as to the progress we had made during the last eleven years, M. Chevalier and M. Rouher stated that, in metal work, pottery, and textile fabrics, it was very great indeed. Mr. Wallis concluded by urging manufacturers to encourage the study of art by giving employment to the students.

The Norwich School.—The annual meeting of the subscribers to this school has also been held. The report stated that the number of the local medals is considerably larger than in the preceding year; added to which, the school has had the honour of winning a national medallion, which was awarded to Miss Ellen Rose. The total number of pupils in the central and out-door schools was 696.

The Plymouth School.—We regret to learn that the late fire at the Royal Hotel destroyed the casts, models, and examples deposited there. To replace the loss, about 12*l.* are required.

CHURCH-BUILDING NEWS.

Beaminster (*Dorset*).—The parish church of St. Mary, Beaminster, has undergone extensive alterations, and is now re-opened. New seats have been made out of the old pews. The galleries are removed from the aisles, the roofs of which are of dark polished oak. In the south aisle was a place called the bone-house, in which the bones occasionally found in the churchyard were deposited. This has also been removed and its place supplied with seats. The belfry ceiling came down to within about 10 feet of the floor: it has been raised to nearly on a level with the roof; and immediately above the door in the place vacated, a coloured glass window has been placed. The window is the gift of Mr. Edward Fox and his wife, and cost 200 guineas. The window is of the Perpendicular style, which gives the quatrefoil surmounting it a rather out-of-place look. In the quatrefoil is the representation of the young Child in the Manger with his father and mother. Around are angels bearing the mottoes "Glory to God in the Highest, and on the Earth peace, good will toward men." Immediately under this are figures of six prophets. The last portion of the window contains representations of the angel driving "the man" out of the garden of Eden; the three angels visiting Abraham; and the two angels being entertained by Lot. The roof of the chancel is of oak, carved and arranged in pattern. The cost of this was supplied by a rate. The chancel has been restored by the incumbent. The roof of the nave rests upon Bath stone supports, with angels bearing shields with symbols such as the cross, the flaming sword, the nails, the scourge, the ladder, the dice, the crown, the lily, the spear, the sponge, the pincers, &c. The pulpit is of old carved oak, and the choir stalls of the new oak with tracery. The whole of the doors have been made new. In addition to these improvements, an organ has been erected at a cost of 320*l.*, which is to be defrayed by voluntary subscriptions. The organ was built by Mr. G. M. Holditch, of London. The roof was constructed by Mr. Hicks, of Dorchester, and the other alterations have been carried out by Mr. White, of London; Mr. Chick, of Beaminster, acting as the builder. The church contains two stained-glass windows, lately erected. The chancel window is erected "In Memoriam parentem Henricus Oglander, A.D. 1856." Beginning from the top, the symbols are The Lamb, The Four Evangelists, The Birth, Baptism, Crucifixion, Ascension, and Our Lord's Appearance to Mary after death. Beneath these, stretching across the whole of the window, is a representation of The Last Supper. On the south side of this is another window in memory of Peter, only son of Peter and Ann Cox. It represents Jesus assuring Martha that her brother Lazarus shall come to life, and telling the centurion that his son liveth. The total cost of the restorations will be about 2,500*l.*

Cricklade (*Wilts*).—St. Mary's church, Cricklade, has been re-opened. The architect who designed and directed the restorations is Mr. Galpin, of Oxford, and the works were carried out by Mr. Smith, of Highworth, builder. All "Churchwardens' Gothic" is said to have been destroyed, and what was a year ago a mass of mouldering woodwork, crumbling stone, rickety galleries, and irregular pews, now presents something like what a country church should be.

Leith.—The new Episcopal chapel in Constitution-street, Leith, the foundation-stone of which was laid in the beginning of last year by the Chancellor of the Exchequer, is now well advanced towards completion, and is expected to be ready for consecration about Easter. With the exception of the spire, the masonry is all but finished, and workmen are now engaged in roofing it in. The designs of Mr. Gilbert Scott have been carried out, in the erection of this church, under the superintendence of Mr. R. Anderson, architect, Edinburgh. The church, as described in the *Scotsman*, is Gothic, of the style of the thirteenth century, and consists of a nave, with north and south transepts, chancel, and apse. At the south-east corner is the tower, which is to be surmounted by a spire,—the height of the tower and spire, when finished, being 180 feet. The extreme length of the building from east to west is 130 feet, and its greatest breadth 75 feet. The western elevation, which is an adaptation of the west front of Dunblane Cathedral, contains the principal entrance, surmounted by three tall two-light windows, the apex of the gable being filled by a small circular window. The nave is lighted by three three-light windows in each side, and the transepts by two three-light windows in each; and the chancel and apse are lighted by five tall single-light windows. The nave is to have an open timber roof, and the transept and chancel roofs will be boarded in the form of a vault. In addition to the principal entrance in the west gable, there is a smaller one in the south transept. In the interior, the nave is filled with open seats, as is also the whole of the north transept, and part of the south. The church is seated for about 600 persons. The apse is raised three steps above the chancel, and divided from it by an ornamental railing. The interior of the apse is all of dressed stone, and has a moulded arcade running round it. In an arched vault at the south side of the chancel, and dividing it from the vestry-room in the tower will be placed an organ, which is at present being built by Mr. Hamilton, and will cost about 300*l.* It is intended that all the windows shall be filled with stained glass. In the meantime, Messrs. Clayton & Bell, of London, have been commissioned to prepare a picture window, illustrating incidents in the life of St. Peter, in a series of medallions, to be placed in the western gable. This window is the gift of Miss Wood, of Hermitage Park, and will cost about 200*l.* The first-floor of the tower will be occupied as a vestry, and the rooms over it as a library and waiting-room. The church will be warmed by a hot-water apparatus, made by Messrs. Meiklejohn, Dalkeith. Adjoining the church a parsonage has been built, also from designs by Mr. Scott. It has been designed so as to harmonize with the church. The stone of which the church and parsonage have been built is from Bishopbriggs Quarry, near Glasgow. The contractors for the mason work are Messrs. R. & A. Berry, builders, Edinburgh; for the carpenter work, Mr. J. R. Swan, Edinburgh; for the slating, Mr. Anderson, Edinburgh; and for the plaster

work, Messrs. Sutherland & Marshall, Leith. The total cost of the building is about 7,300*l.*, including the tower and spire, and upwards of 1,000*l.* additional for the parsonage. —— Another new church will shortly be opened in Leith. It is for the Pilrig Free Church congregation, and is situate at the north side of Pilrig-street. It will seat about 800, and is understood to have cost about 5,000*l.*——A small church is also being built for a Free Church congregation, in Hope-street, near the foot of Leith-walk.

STAINED GLASS.

Christ Church, Banbury.—The Albert memorial window at Christ Church, Banbury, has been inaugurated by a special service. The church was decorated, and the congregation was an unusually large one.

Chaddesden Church.—On the death of Captain Wilmot, eldest son of Sir H. S. Wilmot, of Chaddesden Hall, the friends of the deceased resolved to perpetuate his memory by some appropriate memorial; and it was forthwith resolved to introduce an obituary window at the east end of the chancel of Chaddesden Church. The design was entrusted to Messrs. Clayton & Bell, of London. The principal subject is the Crucifixion. The window consists of five compartments: on the north side is a representation of the soldiers casting lots for the Saviour's garment, and beyond them the multitude is seen returning from the Crucifixion: on the south side is an illustration of the miracle recorded by St. Matthew—"And the graves were opened, and many bodies of saints which slept arose, and came out of the graves after His resurrection, and went into the holy city, and appeared unto many." In the lower compartments are depicted the typical sacrifices of Abel (Genesis iv. 4), of Noah (Genesis viii. 20), of Abraham (Genesis xxii.), of Aaron (Leviticus ix.), and of David in the threshing-floor of Araunah (II. Samuel, xxiv.). In the upper compartment of the window is introduced a symbolical representation of the Lord in glory; and there are two medallions; one of Eve, and the other of the Virgin Mary. The cost of the memorial was 329*l.* The church has also been further beautified by another stained glass window, which has been fixed at the east end of the north aisle, under the instructions of Sir Henry and Lady Wilmot, as a remembrance of their son. It consists of illustrations of the life of Joseph, in eight compartments. It is also by Messrs. Clayton & Bell.

PROVINCIAL NEWS.

Gloucester.—At the last meeting of the city council, the mayor produced a letter which Mr. Lucy had received from Mr. C. J. Monk, with respect to the proposed removal of the fountain from Eastgate Market to the Park. A short time ago Mr. Monk offered to erect a drinking-fountain in front of the Pump-room, and forwarded a design of the proposed structure; but the Board of Health considered that the site was objectionable. Mr. Monk now offered to place 200*l.* in the hands of the mayor to defray the cost of removing the fountain in the Eastgate Market to any site in the Park which the Board might determine on. The letter was referred to the Park Committee.

Birmingham.—The ceremony of laying the foundation-stone of the New Exchange Buildings, in Stephenson-place, illustrated in the *Builder*, was performed on Wednesday.——The Free Libraries Committee have accepted the tender of Messrs. Branson & Murray, for the erection of the Library and Gallery of Art, on the vacant land adjoining the Midland Institute. The tender amounted to 8,600*l.*, but some additional work has been determined upon, the cost of which will bring the amount up to something above 9,000*l.* The following were the tenders sent in to the committee:—

W. & J. Webb	£10,328 0 0
William Matthews	9,930 0 0
Samuel Briggs	9,920 0 0
John Cresswell	9,900 0 0
Barnsley & Son	9,780 0 0
John Hardwick & Son	9,494 0 0
Chambers & Hilton	9,300 0 0
W. & B. M. Smith	9,000 0 0
Charles Jones	8,760 0 0
Branston & Murray	8,600 0 0

The sum voted by the town council was 12,500*l.* The building will comprehend a news-room on the ground-floor, where the Lending Library will also be situate. Above it, and of the same size and shape, semi-circular, will be the Reference Library, lighted from the top. The Gallery of Art, 69 feet long by 30 feet wide, and having a semi-circular roof, will be placed behind the present buildings of the Institute, and on the top story one additional room will be given to the School of Art. A portico will be erected in front of the present entrance, and a double staircase will lead to the first-floor rooms of the Institute, and to the Reference Library. The building will be erected in the same style as the portion already up. Mr. Martin is the architect. As meddling with another architect's work, it is an unsatisfactory affair.

Halifax.—The new Town Hall is nearing completion. The fixing of the spire is in hand. Some months, however, are expected to elapse before the hall will be formally opened.——The Assembly-rooms having passed into the hands of a joint-stock company, known as the Halifax Public Rooms Company, they have been extensively improved and decorated.

SCHOOL-BUILDING NEWS.

Rodbourne (near Swindon.) — Considerable changes have taken place of late in this parish, the most prominent of which have been the erection of a residence for the parish clergyman and the building of a school-house, both closely adjoining the parish church. The school-house has recently been opened. The principal room is about 50 feet by 20 feet, with open roof. Externally, the building partakes of the Gothic style of architecture. The works have been carried out by Mr. T. Barrett, builder, under the direction of Messrs. Money & Son, architects, Newbury. The school-house has been erected as a memorial of the Prince Consort. A tablet commemorates alike the erection of the building, the liberality of the benefactor by whose orders it has been erected, and the purposes to which it is hereafter to be applied:—

"To the most holy and ever blessed Trinity, our Creator, Redeemer, and Sanctifier, three persons but one God, this building is humbly dedicated, in the fervent hope that the religious instruction given in it on the Lord's day may, by the Divine blessing, be so inwardly grafted in the hearts of the children of this parish as to secure their happiness in this world, and their eternal salvation in that which is to come; and also as a lasting memorial of the virtue and merits of the Good Prince Albert, her Majesty's late Royal Consort, whose untimely end this nation so deeply laments and deplores, by Admiral William Bowles, C.B. September, 1862."

Shepton Mallet (Somerset).—The new church schools, recently erected in the Waterloo-road, have been formally opened. The new buildings, although certainly not very attractive on the outside, are well situate, airy, and commodious. They are built in the Early English style, and have cost about 1,200*l.*

COMPETITIONS.

Carlisle Bridge, Dublin.—What has become of the designs submitted for Carlisle Bridge? Three or four correspondents ask the question, and well they may. Months have passed since the designs were sent in.

Malvern Proprietary College.—At a special meeting of the Vice-presidents and Council of the Malvern College, held on Friday, the 16th, at the Imperial Hotel, Malvern, in order to adjudge the prizes proposed for the two best designs for the College buildings, the first premium of 150*l.* was unanimously awarded to Mr. Charles Hansom, of Bristol, and the second premium of 80*l.* to Mr. Chas. H. Cooke, of London. Mr. Hansom will be employed as architect to carry out his designs for the College buildings. The designs will be exhibited at the Imperial Hotel, Malvern, from Wednesday, the 21st, to Wednesday, the 28th instant.

COST OF IRON AND BRICK VIADUCTS.

FOR those long, over-house viaducts whereon railways are carried into the centres of large towns, engineers appear to still prefer brick arches. The *Engineer* gives particulars as to these and iron girder viaducts, from which we take some notes of cost. About a mile and a half of brick arches have been erected on the line of the Charing-cross Railway, their original estimated cost having been 88,300*l.* A great length of brick viaduct is also being built on the City extension of the London, Chatham, and Dover Railway. The cost of these works is, we suppose, somewhere about 30*l.* per lineal yard, or over 50,000*l.* per mile. The viaduct of the Blackwall Railway was said to have cost 26*l.* per yard. For spans of 50 feet and upwards wrought iron is known to be much cheaper than bricks, and it is questionable if the comparison would not be in favour of iron even down to the spans of 25 feet or 30 feet. For a span of 30 feet the girders for a double line ought not to weigh more than 10 tons, which, at 16*l.* 10*s.* per ton, would come to 16*l.* 10*s.* per yard run. Heavy cast iron piers at 7*l.* 10*s.* per ton ought not to bring up the cost, with a viaduct 20 feet high, to as much as 25*l.* per yard forward. Colonel Kennedy's bridges on the Bombay, Baroda, and Central India Railway have spans of 60 feet throughout, so that the weight of a span for a single line is about the same as the necessary weight of 30 feet spans for a double line. The single 60 feet spans of trussed girders weigh 24 tons, and cost 400*l.*, or 20*l.* per yard. The piers are of all depths, according to the ground, but as they are cast 30 inches in diameter, 1 inch thick, and in 9 feet lengths, and as three columns are employed for a double line over ordinary ground, the weight for a height of 20 feet would be rather under 10 tons for each pier, so that the cost would be about 4*l.* per yard. Perhaps one of the most striking instances of the inexpensive construction of wrought-iron girders on cast-iron piers is that afforded by the pier at Southport. This work, designed by Mr. Brunlees, is 1,200 yards long, and is in 50 feet spans, the breaking weight of each of which is about 120 tons. The whole cost of the pier, including sinking piles, cost of toll-houses, gates, pier-head, &c., was but 7*l.* 15*s.* per yard forward.

THEATRES.

New Bath Theatre.—We understand that the reconstruction of the Bath Theatre, which was destroyed by fire last spring, is rapidly advancing, and that the opening of the house is fixed for the 4th of March. The decorations, which have been entrusted to Messrs. Green & King, and are being prepared at their premises in Baker-street, are in a forward state, and will be ready for fixing by the end of the present month. The colour of the box linings will be a light grey green, intended to form a contrast with the complexions of the audience. Care has been taken to prevent reflexion by using a dead body colour only. The ceiling will contain a series of allegorical figures, representing the various kinds of dramatic performances; while the dress-circle front will be divided into a number of panels filled with subjects on gold ground, from the more important of Shakspeare's plays, alternating with the heads and heraldic devices of the English kings that he has introduced. The whole of these, as well as the decorations generally, are flat in treatment. The fronts of the upper tiers will have a gold diaper in slight relief, partially filled with a siver ornament on a subdued salmon ground, and slightly relieved with brighter colour. The proscenium arch will be enriched with a series of figures representing "The Seven Ages of Man," as if to bring more forcibly before the spectators the recollection that "all the world's a stage."

Warming the Stage.—"It must have been universally remarked," says a correspondent with truth, "that the stages in England are windy and cold." Now this is a fault that cannot be too much acknowledged. On this point the stage of Munich should be duly examined. First of all the passage at the side, alluded to in a recent communication, is walled off from the stage with proper close-fitting doors; and, secondly, there should be warm air-shafts opening on to the stage; and, in fact, this matter should receive thorough consideration. At present the stages are miserably warmed in England, and greatly affect the actors and singers.

VENTILATION IN COTTAGES.

THE discussion on cottage buildings, at the Society of Arts, reported in your pages, shows how little progress has been made. There are but few parts of England in which the labourer can pay more than 2*s.* per week rent; many in which he cannot afford so much. At that rent a cottage, with its ground, fencing, draining, &c., ought not to cost more than 80*l.* For such a sum it is useless to attempt to get more than improvements in some essentials. Nothing can be afforded for ornament, nor is it possible to give any but small rooms. The walls must be thinner than could be wished, and they must be of the material that is cheapest in the district.

No attainable size of rooms can be healthy without ventilation, therefore every room should have a chimney shaft. The Barrack Commissioners state as the condition of a healthy room, that the occupants should have 20 cubic feet of air per person, per minute. At this rate a room, 10 feet square and 8 feet high, contains only enough for one person for forty minutes. As the

rooms of a labourer's cottage must for cheapness be small, an attempt should be made to ventilate them properly: a ventilated small bedroom is without question more healthy than an unventilated large one.

Every cottage should have two small bedrooms for the children, in addition to the parents' bedroom. If these are all placed on the upper floor, and each has a fireplace—not a grate—in it, while the living-room, on the ground-floor, has its fireplace and grate in the middle of the cottage, very little contrivance is necessary to make the sides of the living-room smoke-flue in contact with the flues of all the bedrooms. As the living-room has a fire in it, more or less time, during every day, the air in the adjoining flues will be warmed, and an upward current will be set up in them. Fresh-air flues should be formed in the chimney jambs by building them hollow, and these should be supplied by a duct from a suitable source outside, or above, the building. Such a construction is attainable at little cost in a cottage of two floors. The fresh air should be distributed at the top of the rooms, and may be so done as to be insensible as a draught. The cost need not exceed a few shillings.

Chimneys in the middle of a cottage are economical of heat, and perhaps give increased stability to the structure.

It should be remembered, that when bedrooms are sufficiently large to admit of all the children being put into one room, the second room is frequently let to a lodger. FRANCIS LLOYD.

OPEN SPACES TO DWELLING-HOUSES UNDER METROPOLITAN BUILDING ACT.

SIR,—Your leading article respecting a district surveyor's suspension seems to me to make it desirable that I should send you the enclosed statement of a case.

I need scarcely say how much I appreciate the excellence of your remarks. EDWIN NASH.

DISTRICT SURVEYOR OF PENGE AND NORWOOD v. BUCK.

IN this case, heard at the Lambeth Police-court, Mr. Elliott, magistrate, March 28, 1860; a dwelling-house had been erected by Messrs. Buck, of Gipsy-hill, Norwood, with an open space of 100 superficial feet in the rear, surrounded by high walls; but after the house had been roofed in, and in great part completed, two water-closets were built, one above the other, within the space of 100 feet, thereby reducing the area to not more than 64 feet.

To this the District Surveyor objected, inasmuch as the back room, a kitchen, on the lower story, was not "lighted and ventilated from a street or alley adjoining;" and, therefore, that there should be a space of not less than 100 square feet. The magistrate decided that the area of 100 square feet was requisite. Upon this Messrs. Buck proposed to insert a window, 4 feet by 3 feet, in the wall between the said back room and the front room, so as to bring the two rooms into communication, which front room was lighted and ventilated from the street in front. Mr. Elliott considered this remedy would suffice: it was allowed, and has been executed.

COMPETITIONS: THE LAST OUT.

WESLEYAN CHAPEL, PLYMOUTH.

SIR,—If your patience is not worn out, and if your desire to improve the existing state of things touching competitions has not relaxed, you may add to that list a few "particulars" supplied for the "Wesleyan Chapel, Plymouth" competition. The committee divide their requirements into two parts. 1st. Chapel, vestries, boundary inclosures, iron railings and gates, roads and ways; and, 2nd. Schools, chapel-keeper's dwelling-house, and class-rooms. After stating under each head the accommodation desired, they state what plans they require "to be submitted for competition," which "must be on a uniform scale of 8 feet to an inch, are numerous, and must include details to a large scale.

The list of plans required under the second head is similar, and also includes "details of roofs, windows, walls, seats, desk, and platform, to a scale of 2 feet to an inch."

The outlay of the parts comprised under the first heading, "shall not on any account exceed 5,000*l.*"

The committee with great modesty ask for "a specification, as full and explicit as possible, with particular directions for all things requisite for the completion of the building, including chapel, vestries, schools, &c.; also the boundaries, and the supply of water, lighting, warming, and ventilating."

"The designs which obtain premiums to become the property of the committee, who are not to be bound to employ any of the competitors to carry out the works."

"Two premiums will be given, one of 50*l.*, and the other of 25*l.*" "Competitors must look solely to the premiums for their *remuneration*, as the committee do not engage to employ either of the architects whose designs may be accepted." "The committee will be entitled to receive from the successful competitor or competitors (if not employed to carry out the works), all requisite working drawings and specifications, to enable them to carry out the work; for which, and to cover all correspondence incident to the completion of the building, a sum not exceeding 50*l.* will be paid on the works being completed."

The real fact (which is somewhat clumsily disguised), appears to be that the committee are trying to obtain the right to an architect's entire professional services, value 400*l.* (assuming the outlay under No. 2 head to be 3,000*l.*), on payment of 100*l.* to him, and 25*l.* to some one else. But this is not all: he is to make all working drawings, &c., as in the clause quoted last but one; and yet, in case the works be stopped before completion, he would have no claim whatever beyond the amount of the premium; and even if the works be completed, the "sum not exceeding 50*l.*" might, "in the judgment of the committee," be reduced to 25*l.* A NON-COMPETITOR.

*** Since this was set up in type we have received five other indignant letters concerning this very impudent proposition. Architects who respond to it deserve the treatment they are likely to receive.

SURVEYORS' CHARGES.

SIR,—You have more than once laid before us in the *Builder* the recognized charges of *architects*, but I have not observed any such information as regards surveyors. If some of your correspondents would kindly state what are the usual charges made by surveyors for surveying, valuing and reporting, in reference to property offered as security on mortgage, they would oblige,—

A SURVEYOR.

*** Several letters have reached us to the same effect. We shall be glad to hear from correspondents who may be willing to state their own customary charges.

COMPENSATION CASES.

The Charing-cross Railway.—At the Sheriffs' Court, Red Lion-square, before Mr. Under-Sheriff Burchell, the compensation case, "Marshall *v.* The Charing-cross Railway," has been settled. Mr. Hawkins, Q.C., was for the claimant; and Mr. Lloyd, Q.C., for the company. The claim which, as originally made, was 5,924*l.*, was in respect of the loss of business in Hungerford-street, and the expense attending the purchase of other premises near the Lowther Arcade, in the Strand. Mr. Marshall had been a confectioner and baker in Hungerford-street for twenty-seven years, and had a lease for eleven years unexpired at 16*l.* a year, of premises worth 210*l.* He had netted as clear profit 1,100*l.* a year, of which 520*l.* was derived from chance custom. About 4,000,000 persons a year passed to the bridge; and he had sold on one or two occasions 5,000 buns a day. He had expended 2,700*l.* in respect of his new premises, which were not so eligible either for his business or his customers, and five-sixths of his chance custom had been destroyed. He considered he had lost beyond his usual profits about 300*l.* by being obliged to remove in the Exhibition year. Mr. Hawkins claimed a liberal compensation for the injury done to Mr. Marshall, who had been deprived of an excellent site and an increasing business; and on the present occasion he submitted that he was entitled to 4,483*l.* Mr. Lloyd complained that there had been a good deal of "cooking" in bringing the case before the court, and that sums of items of profit had been grossly exaggerated. Mr. Under-Sheriff Burchell told the jury (composed partly of special jurymen) that they were to give a fair compensation for the loss of business sustained by Mr. Marshall, and for the value of property and any loss he had sustained. The jury, after deliberation, assessed the compensation at 3,000*l.*

PATENTS CONNECTED WITH BUILDING.*

IMPROVEMENTS IN RAILWAY SLEEPERS AND CHAIRS, AND IN THE MODE OF FIXING RAILS.—*M. A. Muir* and *J. McIlwham*.—The improved sleeper is cast in the form of a disc: there is a central boss which forms a base, from which the chair jaws spring. This part of the sleeper is cast thicker than the other portion, and below it is further strengthened by a transverse rib, which extends across the underside of the boss, and has formed on it a feather, which is directly under the centre of the rail, and which fits a notch in the bar. From the raised central part the surface of the sleeper slopes slightly towards the margin, the rim being curved in an outward direction, somewhat similar to the lower part of a bell. The sleepers when laid upon the ground are connected by transverse tie-bars, which extend beyond the centre of the sleeper, and this part of the tie-bar is notched to fit the feather part of the central rib of the sleeper. The tie-bar is fastened to the sleeper by a saddle bolt, which passes up through the disc, and is secured thereto either by a nut or split key. The second part of the invention refers to a mode of fixing rails in the chairs.

* Selected from the lists in the *Engineer*, &c.

IMPROVEMENTS IN THE MANUFACTURE OF BLOCKS, PULLEYS, AND WEIGHTS FOR WINDOW SASHES AND OTHER PURPOSES, AND IN THE MODE OF APPLYING THE SAME.—*W. McAdam*. This relates to the application of clay or other suitable mineral substances, either in the form of earthenware or glass, to the manufacture of blocks, pulleys, and weights, and which have hitherto been manufactured of metal. Under one modification of these improvements, as applied to the hanging of window-sashes, the block or frame in which the pulley or pulleys run is formed of clay, moulded to the required form, and afterwards glazed and fired in the usual way. The sheaves or pulleys are also formed of similar materials, and various kinds of clay, such as is used in the manufacture of porcelain and all kinds of earthenware. Instead of using iron or other metal for weights, it is preferred to make them of the heavier kinds of earthenware. These weights are either moulded solid, or with an internal cavity, to be filled with "mine dust," or other suitable mineral material, or which may be mixed with the clay for the purpose of increasing the specific gravity of the weights.

VENETIAN BLINDS AND OTHER WINDOW BLINDS.—*H. Saunders* and *J. H. Mills, Birmingham*. Dated 28th May, 1862.—This invention has for its object, in the first place, the construction of the blinds, and the combination therewith of apparatus for raising and lowering the same in such manner as to admit of the several laths thereof being packed together at the top instead of at the bottom as usual. For this purpose the several laths are respectively connected to a chain at each end, such chains being adapted to work in gear with a pair of corresponding toothed-wheels by the revolution of which the several links of the blind are successively carried forward and packed together in a suitable receptacle at each side of the window, being guided into their respective places by means of guides, which are in some cases fixed, and in others movable on centres. The laths of the blind are kept at any desired angle. The invention consists, in the second place, in adapting and applying to Venetian blinds "lazy tongs" for the purpose of causing the laths to approach near together gradually throughout the blind when it is raised, instead of bringing the laths at the bottom of the blind close together as usual. And the invention consists, in the last place, in fixing the raising and lowering cord of Venetian or other blinds so as to run on a spindle inside a tube on the end of the ordinary roller, for the purpose of allowing the blind to extend to or nearly to the whole width of the window, instead of leaving the usual space between the end of the blind and the side of the window.

METALLIC SASH-BARS.—*W. Perks, Birmingham*. Dated 29th May, 1862.—According to this invention the patentee makes the metallic sash-bars very nearly of the ordinary figure, that is, of the figure in cross section of an inverted T; but he makes the top of the vertical rib somewhat thicker than the other parts of the rib. Upon the said vertical rib of the sash-bar he places a folded or doubled metallic strip, which fits upon the said rib and clips it closely, the lower edges of the said doubled strip being turned into a nearly horizontal plane, so as to cover or partly cover the horizontal parts of the sash-bar on which the panes of glass rest. The said folded or doubled metallic strip is fixed upon the sash-bar by its opposite sides being partially separated when it is placed upon the bar and allowed to close, and thereby fix itself.

Books Received.

Practical Mechanics' Journal Record of the Great Exhibition of 1862. London: Longman & Co.; also at the Proprietor's Office (Patent Offices), 47, Lincoln's Inn-fields.

THIS is a large and handsome volume, full of profusely illustrated articles, by more or less noted writers, on the various subjects into which the Great Exhibition was divided. We have thus a paper on Building Contrivances and Decoration, written by Mr. G. R. Brunell; on Engineering Structures, Harbours, and Docks, by Mr. G. B. Rennie; on Water Supply and Hydraulic Apparatus, by Mr. J. F. Bateman; on Illumination and Gas-making, by Dr. Frankland; on Sewerage, Deodorization, Disinfectants, and Sanitary Contrivances, by Dr. Angus Smith; and many more by various other competent writers. The general editor is Mr. R. Mallet, Vice President Inst. C.E. Ireland.

Having ourselves already pretty well exhausted the more strictly professional branches of the subject, we may glean a few quotations from the papers of Dr. Frankland and Dr. Angus Smith on other subjects of interest to our readers.

Dr. Frankland thus speaks of the means of purifying gas exhibited :—

"Just previous to the Exhibition of 1851 Mr. Hills made a most important discovery with regard to the purification of coal gas; and his ingenious and beautiful process has since received such an extensive development as to have almost superseded the old lime process. This method of purification depends upon two chemical facts; viz., first, that hydrated peroxide of iron rapidly combines with sulphuretted hydrogen, and becomes converted into sulphide of iron; and second, that the sulphide of iron thus formed is rapidly decomposed in contact with the air, the sulphur becoming separated as such, whilst the iron is reconverted into the original material, hydrated peroxide of iron. Mr. Hills recommends that the hydrated peroxide of iron should be mixed with a considerable bulk of sawdust before it is placed in the purifiers. After the gas has passed through this mixture for eighteen hours it is shut off, and replaced by a current of air forced through by a fanner for three hours. The sulphide of iron is thus oxidized, sulphur being separated and hydrated peroxide of iron regenerated; and the purifying material being now revivified, the impure gas may be passed through it again as before. In this way it is only found necessary to remove the material once a month, in order to separate the lowest stratum of about an inch in thickness, which has become clogged up with tar. A proportional quantity of fresh mixture of hydrated peroxide of iron and sawdust having been added, the whole is again returned to the purifier. It is difficult to conceive a more simple and inexpensive process of purification than this. It does not, however, remove carbonic acid.

Both the lime and oxide of iron processes of purification fail to remove bisulphide of carbon vapour, and the organic sulphur compounds above alluded to, from coal gas. These sulphur compounds produce sulphurous acid during the combustion of the gas, and thus the atmosphere of the apartments so illuminated becomes impregnated to such an extent with sulphurous acid as to be highly offensive to the senses, and very destructive to art decorations, bindings of books, &c. For this evil, so frequently complained of by gas consumers, the Rev. W. R. Bowditch, who exhibits under 492, has discovered a remedy, which consists in passing the gas, after it has been submitted to one of the ordinary purifying processes, through or over hydrate of lime, heated to 400° Fahr. At this temperature hydrate of lime decomposes a large proportion of the sulphur compounds, converting the carbon into carbonic acid, and the sulphur into sulphuretted hydrogen. These new compounds are not absorbed by the hot hydrate of lime, but they can be removed by subsequently passing the gas through cold hydrate of lime. The hot hydrate of lime retains its power of thus effecting the transformation of an irremovable impurity into a removable one for a great length of time. Should this ingenious process be found to be applicable on a manufacturing scale, it will constitute a most important improvement in the manufacture of coal gas, and will remove the last objection to the use of gas in dwelling-houses."

A kindred subject treated of by Dr. Frankland is that of paraffine oil :—

"In the British department of the International Exhibition Mr. Young, who must be regarded as the founder of the paraffine industry, exhibits (532) a splendid block of paraffine weighing nearly half a ton, colourless, inodorous, tasteless, and beautifully translucent: he also shows specimens of paraffine candles, and oils made from the Wemyss, Torbane Hill, Wigan, and Newcastle coals; showing that all bituminous coals yield these substances.

Mr. Young's paraffine oil is now very extensively used throughout the United Kingdom as an illuminating agent, for which purpose it is peculiarly well adapted, since it consists mainly of hydrocarbons free from oxygen. These hydrocarbons deposit much carbon on combustion; and hence, with a properly regulated supply of air, they produce a more brilliant light than that obtained by the consumption of an equal amount of animal or vegetable oils, which contain a not inconsiderable amount of oxygen.

The enormous extent of the use of paraffine oil for illuminating purposes may be conceived from the fact, that in the neighbourhood of Edinburgh two years ago, one lamp manufacturer alone had constructed during one year 247,331 lamps exclusively for its consumption, and that he was then making them at the rate of 1,200 per day.

Paraffine oil requires for its combustion lamps of peculiar, but simple construction: thus, the vessel that holds the oil should be of glass or stone ware, so that the oil may not become heated; and for the same reason there should be no metallic connexion between the burner and the oil. For the perfect combustion of paraffine oil, a more rapid current of air is required than in the case of animal or vegetable oils, and the current must be made to impinge powerfully against the flame, either by surrounding the latter with a brass dome within the glass chimney, or by the contraction of the glass chimney itself. The wick should be well dried before it is put into the lamp, as the oil does not readily rise in a damp wick. With good oil the wick will last several months. In trimming the lamp, the wick should not be cut, but only wiped clean, the carbonized edge which it acquires in burning being found to answer better than a newly cut one. It is found in practice that lamps with flat wicks burn the oil somewhat more economically than those with annular wicks, nevertheless, the latter are more convenient where a flame of considerable illuminating power is required

The comparative illuminating power of paraffine oil is remarkably high. According to Dr. Letheby's experiments one gallon of Young's paraffine oil, weighing about 8½ lb., will give the light of—

23½	lb. of	spermacetti candles; or,
27	,,	wax candles; or,
28½	,,	stearic candles; or,
30½	,,	composite candles; or,
10	,,	best tallow moulds."

Dr. Angus Smith, in speaking of the town sewage question, and while noticing the names of some of those who have recommended dry closets, says :—

"These all seem anxious to retain the method of bringing out the filth of houses by manual labour instead of allowing it to run off by underground passages, never to be seen by the eye until it rises up in the purest and most useful forms in our fields. No method of removal by carts has been found otherwise than disgusting. At the same time it is in many places simply a necessity, and Dr. Lloyd renders it as little offensive as possible. The use of sawdust, as Messrs. G. Smith & Co. propose, or of ashes or any other solid matter poured from the lid, as Dr. Lloyd proposed, may be made to answer with care, but does not promise simplicity and permanence of construction. It is, however, manifest that a reorganization of this old-fashioned method of removal by carts is demanded loudly where water cannot be used, and there is room for great success to its promoters. Generally in schemes of sewage, mechanical is preferred to chemical action. Is it from our love of expenditure or our love of great appearances, which are not found where there is the quiet and silent action of chemical agents?"

On the subject of filters Dr. Smith says :—

"Mr. Spencer sends quite a new filter. It is of artificial magnetic oxide of iron, and it renders even peaty water instantly clear. It is said also to be perennial, because it appropriates the oxygen of the air only and does not expend its own, compelling the oxygen to combine with the organic matter in the water. This certainly gathers probability, from an experiment described as having been in progress for three years at Southport. Experiments will remove all doubt of the efficiency of this new filter, which seems never to fail. Many peaty districts have been rejected by towns seeking a supply of water; now that supply will be available by using Spencer's filter. But it is probably a waste of time to speak well of it, as its power is manifest, and there are no engineering difficulties to surmount. It will be a pity if the love of engineering difficulties should prevent its use.

Dr. Burg, of Paris, sends a stone filter. To filter through stone is not a novelty, and the stone being calcareous, may be an objection. But the form is new. It is a hollow cylinder; and those cylinders intended for towns have nine square mètres of surface within. The frame is of iron, with places for the small filtering stones, which are inserted as panes of glass are. They are about four inches square and a sixth of an inch thick. One description in a French journal says ten millimètres. The inside of the cylinder is filled with water, and the filtering is outwards. Streams flow from the small square stones on every side and fall through the air for thorough aëration. When one-third of the water is filtered, Dr. Burg takes the remainder for purposes where less pure water is demanded. This necessitates two water supplies. The filters cost 20*l.* each, and filter 11,000 gallons per day—a supply intended for 1,000 persons. The force of the water flowing into the cylinder removes the impurities that may collect on the surface. For domestic use the cylinder is dipped into water, and the filtering is inwards.

Atkins & Sons make carbon-moulded filters. Carbon to be moulded, must have pitch or some carbonaceous substance melted with it, which injures the filtering power; but the shapes are capable of variation, and of these may be mentioned the cylinder and tube. By sucking the tube the water enters the charcoal cylinder, and a clear draught is procured from a muddy stream. It may also be used in an inverted manner, that is, by driving the water first into the cylinder, and then allowing it to filter outwards.

M. Danchell, and the Silicated Carbon Company, send very agreeable forms of filters, and this part of the subject is not neglected by the others, who exhibit the finest porcelain and Wedgwood ware in modern and antique forms."

The book is a valuable one.

A Practical Treatise on the Law relating to Mines and Mining Companies. By W. ARUNDELL, Attorney-at-Law. London: Lockwood & Co. 1862.

THIS is a useful summary of the rights, obligations, and privileges of the miner, as they exist at this day, and as defined and determined by the statute law of the land, by decisions in the law courts, and by ancient custom. The Joint Stock Companies Act of 1862, re-enacting that before passed, with some additions and alterations, may have some new bearing on mining as well as other companies, but it was printed on the eve of publication of the present volume. The author, however, refers to its enactments.

VARIORUM.

THE new number of *The Quarterly* contains an interesting and acute article on the South Kensington Museum and the Loan Exhibition. The authorship may be recognised without much difficulty. A short quotation will serve to show the tone of the article. The writer terms the age one of wholesale reproduction of second-rate art, and condemns the working up of sham material to meet the views of the "semi-detached" stratum of society :—

"The key to the prevalence of false furniture will not be difficult to be discovered by any one who has gone a few miles out of town in any direction, and noted the strange phenomenon of the endless rows after rows of neat terraces, shading off into blocks of more ambitious semi-detached houses, which are unvarying types of the modern London suburb in Middlesex, Surrey, Kent, and Essex. If he is of a musing or a practical turn, he cannot fail to make the discovery that these bantlings of the building fraternity present in the aggregate an appearance of boundless wealth which can only be explained by the consideration that they are purposely made to combine the maximum of show with the minimum of outlay, both on the part of the speculator who has run them up, and of the tenant of very moderate means who occupies them. We should be the last persons in the world to deprecate art which is really cheap by being really artistic. The substitution of well-executed chromo-lithographs of the accredited pictures for tenth-rate original daubs or miserable copies, saves the purse and educates the eye of the man who has a drawing-room wall to cover. The general introduction of furniture showing through varnish the genuine grain of the deal or the birch of which it is made, in place of clumsy veneers of inferior mahogany, coarse grainings of impossible foreign woods, or the Quakerly uniformity of drab-paint, is an unmitigated benefit to good taste, economy, and cleanliness. But before we can proclaim a triumph, the false Duessa of sham art must be slain. As it is, the general upheaving of good taste has been more conspicuous in securing improvement of design than reality of material. We have instances in our eye in which the upward movement in one direction has been counteracted by a downward one in the other; and designs which the popular art mind would not have swallowed twenty years back have been made possible by a complex ingenuity in sham, of which that generation would have been equally guiltless. Perhaps the Crystal Palace has something to answer for in this respect."

The writer thinks, nevertheless, that he can discern the results of a more catholic study and appreciation of all the styles of art :—

"Architecture is no longer confined to the direct imitation of a few stock patterns; and the furnishing of a house is no longer abandoned to the upholsterer's unenlightened judgment. Considerations of climate and of national habits, the close study of natural forms in human, animal, and vegetable life, bold experiments in the juxtaposition of colours, a wider employment of materials for constructive objects,—all indicate the germination of a new style derived from, but not servilely following, existing systems. We shall not recapitulate the means by which we have already had occasion to show we have arrived at the conviction that this style, while boldly eclectic in its details, must, in its main principles, vividly embody the historical characteristics of England, for whose material uses it will come into being. We are aware that in venturing this antic paton we may excite the apprehension, and perhaps bring down the grave remonstrances of those who are afraid to look beyond precedent. We are satisfied to take refuge in the conviction of the essential unity of all true art; while from that conviction we infer the unsoundness of all theories which hold up any antecedent age as an epoch of ideal perfection."

After indicating the semi-detached house of the suburbs as a last stronghold of bad taste, he looks hopefully to the country-house, properly so called, as a likely field for successful originality.——"Science elucidative of Scripture and not antagonistic to it. By J. R. Young, formerly Professor of Mathematics in Belfast College, &c. London: Lockwood & Co. 1863." This is an able treatise in its way; but the best of all weapons against sceptics, either from within or from without, we conceive, are spiritual weapons. There is among modern Churchmen by far too exclusive a dependence on the "letter" of the Bible "which killeth;" and an almost total blindness to "the spirit," which alone "giveth life." Hence the power and mischief of such attacks as those of Bishop Colenzo and the Essayists from within the Church, as well as of those of more open sceptics from without. This was not so in olden times, when the spiritual and typical meaning of literal Scriptural narratives was far more deeply and exclusively considered than the mere literal meaning itself. When St. Paul tells us, of the story of Abraham, Agar, and Sarah, that these things "are an allegory;" and turns our attention exclusively to the deep and vital spiritual meaning involved in the literal story; while he treats the latter with complete disregard; what does it signify to a Christian whether "the letter" in such a case be assailable or unassailable, since it is "the spirit" infused into it which alone "giveth life"? Here is a chink opened to us by St. Paul, which lets in the Light of the Spiritual Sun over the whole length and breadth of the Jewish Pentateuch. If, on the other hand; an author such as Mr. Young imagines that he can silence scepticism in the way he tries to do, we fear he will find himself mistaken;—as, for example, in the ingenious attempt to render the miracle of Joshua a little less startling than it appears to be; by an explanation to the effect that the sun, though commanded, really did *not* stand still, neither was the moon stayed; or rather that the earth did *not* cease to rotate; but that some sort of vacuum may have been produced in the ethereal medium; the result of which miracle would be that the sun might disappear, and the moon also, for a whole day; while, somehow, light remained till the sun and moon came round again, or rather till the earth had completed its usual diurnal rotation; when the sun and moon would again appear, in consequence of the filling up of the ethereal vacuum. Now only let us look a little closely to the passage itself in question, in the first place; and we may at once perceive that its true meaning must be spiritual, and not literal at all; and, in the next place, let us "search the Scriptures" for affinitive passages which may shed a light upon this one; such as Scripture alone can shed upon Scripture; and then we shall have a better understanding of its true meaning than by all the vain attempts of science to settle such a question. The narrative of the miracle in Joshua (x. 12) thus opens :—"*Then spake Joshua to* THE LORD, in the day when the Lord delivered up the Amorites before the children of Israel; *and he said* [*"to* THE LORD"], in the sight of Israel,—SUN, stand thou

still upon Gibeon"; &c. The Sun, then, who hearkened unto the voice of a man," was the Lord, himself, "the Sun of Righteousness," who thus "fought for Israel," in "the good fight of faith"; and there are many other passages of Scripture capable of shedding a spiritual and affinitive light upon this one. Thus,—"The sun shall be no more *thy* light by day, neither for brightness shall the moon give light unto thee; but THE LORD shall be *unto thee* an everlasting light [both solar and lunar], and thy God thy glory. THY SUN [the Lord] *shall no more go down; neither shall* THY *moon withdraw itself; for* the Lord shall be thine everlasting light." (Isaiah lx. 19, 20.) We have no room here for the teeming explanatory comments which such a passage as this suggests in connexion with the miracle of Joshua. Here and elsewhere in the Scriptures are abundant materials for the correct interpretation of that miracle, on principles quite as Baconian, or inductive, and as scientific, as any; and much more satisfactory and conclusive.

Miscellanea.

RATING AND RESTRAINING TELEGRAPH COMPANIES.—Some of the metropolitan parishes are moving to obtain an Act to regulate the doings of telegraph companies, and to fix some definite rule for assessing the property to the parochial rates.

THE LATE MR. JOHN BILLING, ARCHITECT.—We have to record the death of this gentleman at the early age of forty-five: and do so with regret. It occurred on the 13th instant. Mr. Billing, it will be remembered, had recently given special attention to the construction and arrangement of chimneys.

"APOLLO AND MARSYAS."—It appears that this picture, attributed by Mr. Morris Moore to Raffaelle, has obtained more general acceptance in Rome than in England, where, if we remember rightly, there were two opinions. The Roman Government have determined on having it engraved at the Pontifical Chalcographic establishment, for which purpose a drawing will be made by a leading historical painter and Academician of St. Luke's. It is desired by many that the Government should purchase this picture to secure it for Rome, but as to this nothing is officially given out, and it is doubtful whether Papal finances will suffice.

PARLIAMENTARY DEPOSITS ON RAILWAY BILLS. The 14th was a busy day at the Bank of England and at the office of the Accountant-General of the Court of Chancery, in consequence of the payment by the railway and other public companies of the 5 per cent. deposits on the estimated cost of their respected undertakings in conformity with the standing orders of both Houses of Parliament. It is understood that the payments, all things considered, were highly satisfactory, and that about 3,000,000*l.* in money, stock, securities, and Consols were paid in before the offices closed. The total share capital proposed to be raised in connexion with the new undertakings amounts to upwards of 30,000,000*l.*, the capital proposed to be raised by the metropolitan lines alone being about 8,000,000*l.* Of these latter, however, some did not pay the required deposit, and among them the Fulham and Hammersmith, Pimlico and Paddington, and proposed Kensington and Knightsbridge railways.

THE MANCHESTER WATER-WORKS.—The Manchester City Council is about to make some important additions to its water-works system. The new works comprise a new grating tank, which it is proposed to construct on the easterly side of the Godley reservoir, with conduits and sluices, to enable the water to be drawn either from the reservoir or the gauge basin, in order that the supply may not be interrupted if at any time it should be necessary to empty the Godley reservoir. A main pipe, 30 inches in diameter, is to be laid down from such grating tank at Godley to a reservoir to be constructed on Prestwich Hills. The reservoir will be constructed on land already purchased, and will contain 23,000,000 gallons, whilst the plans will be designed, and a portion of the land reserved, for the construction—if and when required—of a second reservoir. The works proposed will afford a supply of 8,937,000 gallons a day into the Prestwich Hills reservoir for the high-level district, which is about three times the present estimated demand. It is also proposed to obtain power for the construction of an additional embankment at Woodhead. The additional embankment will cost about 35,000*l.* The estimated cost of the new and important works described, including the expenditure at Woodhead, is 175,000*l.*

CHELSEA LITERARY AND SCIENTIFIC INSTITUTION.—A *soirée* was held in the Vestry-hall, King's-road, on Friday, the 16th, to celebrate the second anniversary, when the lecture-hall and reading-rooms were decorated with statuary, pictures, photographs, and microscopes, and a concert of instrumental music was performed by the band of the Corps of Commissionnaires. A quadrille band afterwards did duty. Some clever transparencies in tissue paper, of which we have before spoken, were lent by Mrs. Herbert.

THE WATER-COLOUR ARTISTS' LANCASHIRE FUND.—The artists have sent their first contribution, 500*l.*, to Lord Derby's committee. The subscriptions are now coming in fairly. Mr. Lewis Pocock and Mr. Agnew have priced the various works, and the result is 4,500 guineas. The subscription will be confined to that sum. We hope the prices have been kept moderate. The exhibition in London will close on the 31st instant, and the collection will then be shown at the Royal Institution, Manchester.

THE PROPOSED BURKE AND WILLS MONUMENT AT MELBOURNE, IN VICTORIA.—An address, on 21st November last, was delivered at the Hall of the Royal Society of Victoria, by Mr. John Millar, F.S.A., Civil Engineer, in regard to the proposed site of the monument to be erected to the pioneers Burke and Wills, who lost their lives in crossing the Australian continent. Mr. Millar objects to a monument which is only to cost 4,000*l.* being erected on the gazetted site, as certain to be dwarfed by the overshadowing Houses of Parliament, Treasury, and proposed Chief Secretary's Office; and advises that it be erected in the vicinity of the Hall of the Royal Society itself, whence Burke and Wills may be said to have gone forth on their expedition. The vertex of the triangular piece of ground on which the Hall stands Mr. Millar suggests as a very fitting site for such a monument, which will be the first statuary group in the colony.

LECTURE ON BELLS.—On Tuesday evening last, the first lecture for the second half of the session of the York Institute was delivered by Mr. W. F. Stephenson, of Ripon, his subject being "Bells—Literary, Pictorial, and Musical." The hall of the Institute was crowded. The lecturer divided his subject into half a dozen appropriately-termed "peals" or parts. The first related to the early history of the bell. The second, which included some curiosities of bellfounding, was concluded with a reference to the Bell-Founder's Window in York Cathedral. This, the lecturer said, was the second window in the north aisle of the nave, and was perhaps put in six or seven hundred years ago by a young lady named Tunneck, in memory of her father. The window was a curiosity as exhibiting in its several compartments the ancient methods of bell-founding, one of which showed that the cone, instead of being cast in a vertical position, was cast horizontally. Another compartment illustrated the removal of the metal to the furnace and the opening of the door, whilst the centre compartment of the window exhibited the presentation of the bell to one of the church dignitaries. In the third, fourth, and fifth "peals," the lecturer showed how bells were rung, remarkable feats of ringing, and the language which bells speak. Illustrations of hand-bell ringing were given by the York Campanalogian bell-ringers.

LODGINGS FOR YOUNG MEN IN LONDON.—This is a subject which has occasionally engaged our attention, and we are glad to observe from a letter in the *Star* that a movement is now being made towards a realization of the object in view. The writer says: "Recent conversation with an eminent merchant in the City, who holds a high office in the Corporation, and is but a few years removed from the civic chair, has brought this subject still more prominently before me, at the same time that an unusually good opportunity of trying the experiment presents itself. There are premises to be had for 340*l.* per annum which would accommodate from eighty to ninety gentlemen with spacious coffee and drawing rooms, and a very large kitchen, housekeeper's room, store-room, and cellars. We calculated that 3*s.* per week would, on eighty inmates, give 12*l.* per week. Now, setting the rent at 7*l.*, four servants 16*s.* each—3*l.* 4*s.*—there would be an ample income, supposing the furniture provided for by one hundred 5*l.* shares paid up by easy instalments, payable, and leave a dividend of 12 per cent. on the outlay: my friend, however, who is willing to be a trustee, doubted whether there was enough cohesion and steadiness among young men to make such a thing succeed. This letter is to try the experiment of inviting letters from young men on this subject."

A POLICE FIRE-BRIGADE.—Government, it is said, have decided upon introducing a Bill into Parliament for establishing a fire-brigade force in conjunction with the metropolitan police.

PROPOSED MEMORIAL OF THE LATE MR. STYLEMAN LE STRANGE.—Subscriptions are being sought to raise a memorial of the late Mr. Le Strange, in the shape of the restoration of Hunstanton Church,—a work commenced by that gentleman. Our advertising pages show where contributions may be paid.

PHOTO-SCULPTURE.—A remarkable invention, intimately connected with photography, is now engrossing the attention of artists, in France, according to *Galignani's Messenger*. The method followed by the inventor, M. Willême, is this:—A number of simultaneous photographs of a person is taken, and the outlines thus obtained are enlarged or reduced at will by the pantograph. With these data M. Willême produces a statue in clay, or bronze, the exact likeness of the original, in any size, and in so short a time as is hardly to be credited. The price, too, is extremely moderate.

THE "DANMARK," DANISH DAILY NEWSPAPER.—A new feature in Danish newspaper literature is the insertion of an English article on literary as well as political events in the Thursday's issue of the new paper called the "*Danmark*," published at Copenhagen. English readers will thus have an opportunity of becoming better acquainted with Danish affairs than heretofore; to the promotion, we doubt not, of a good international understanding between the two countries, which are so soon to be otherwise united in kindred bonds of friendly regard. It is to be regretted that at this precise moment unpleasant questions should be started between the two Governments, at a time when the royal families are about to be more closely united. The circumstance reminds us of something similar on a former occasion. Our oligarchical Government, we suppose, desires to show the world how independent it is of our Royal family affairs.

STEAM ON COMMON ROADS.—Mr. C. B. King (of Abingdon-street, Westminster) has recently designed a traction-engine for some Russian merchants. The boiler, which is constructed on the locomotive principle, is supported by a wrought-iron framing, which, working downwards, is fitted with horn-plates, giving an outside bearing to the driving-wheels, which are 6 feet diameter, and 14 inches wide. They are constructed of T-iron, with a cast-iron boss, from which round spokes proceed. Between the spokes an elastic medium is introduced between them and the tyres, to relieve the wheel from violent shocks, which are often met with when travelling on turnpike roads and paved streets. To each end of the engine are fixed transversely baulks of timber, to which are fixed buffers and drag chains. The length over all is 20 feet, and the extreme breadth 7 feet. The cylinders (which are 8 feet diameter and 13-inch stroke) are fixed on brackets between the main framing and the boiler. The centre of gravity is low, being only 2 feet 8 inches from the ground. The engine is designed to work at 60lb. pressure on the square inch, and will travel at from 6 to 7 miles an hour.

DWELLINGS FOR LABOURERS.—The recent case of death from foul air in Berks, lately reported in our columns, has redirected attention to this subject in Scotland. The *North British Agriculturist* has an article on the deficient accommodation for agricultural labourers, in which it says:—"Let it once be definitely understood that public opinion demands a better description of housing for labourers; and by a judicious combination of the owners and occupiers of land these obnoxious dwellings will be superseded by comfortable, commodious, and healthy cottages. Hitherto the apathy of all classes directly interested—landowner, farmer, and labourer—to the importance of suitable dwellings may palliate, but cannot excuse, the neglect of many of the landowners in Great Britain in their duties regarding the housing of those required to cultivate their estates. A limited number of landed proprietors have combated manfully with the difficulty. The late Duke of Bedford is the most notable example in England, and the Duke of Buccleuch in Scotland. To arouse public attention to the enormous evils which result to society from the insufficient house accommodation in dwellings occupied by the labouring classes, alike in rural and urban districts, a Parliamentary inquiry is apparently necessary; as hitherto neither lectures, public meetings, nor the press, have awakened the influential members of the community to their responsibilities in reference to the housing of the labouring classes

FALL OF A CHURCH AT LOCARNO. — Private letters give an account of the fall of the church of La Madonna del Sasso, at Locarno, on the Lago Maggiore, between Italy and Switzerland, killing fifty-three women and one man. The dome was heavily covered with snow, which caused the whole to give way while the congregation, chiefly women, were kneeling in prayer. One woman alone (a young bride), escaped, with both legs and an arm broken. Had the occasion been a festival probably 500 persons would have been killed.

ORGANS.—The Court of Queen's Bench have this week decided that they could not sustain the right of patent in the pneumatic lever invented by Mr. Willis, the organ builder, against Mr. Davison, who had appropriated the invention. The Court stopped Mr. Grove for the defendant, being satisfied by him that, as it appeared on the evidence that the pneumatic levers were only another form of bellows, and that the escape valves had been applied to the old form of bellows, the new application of it by the plaintiff was not the subject of a patent.

WANT OF VENTILATION IN COURTS OF JUSTICE. At the Staffordshire sessions lately a letter from the high sheriff of the county was read, stating that the three judges who had sat in the Crown Court during the last year complained of the difficulty of hearing prisoners, and also of the bad ventilation of the court. On one of the days of the last assizes the judge had to leave the court for fresh air, and he (the sheriff) had to do the same. Mr. Twemlow said he replied to the letter, promising to bring it before the finance committee, but stating that he was afraid nothing could be done to improve the ventilation of the court, as it was ventilated on the new principle of having a gas-burner at the top. He would only observe that the ventilation was better before the top gallery was closed. Considerable expense has been recently incurred in improving the court. The chairman said the ventilator at the top of the court might be made larger. The subject was referred to the county surveyor.

AN ELECTRIC WEAPON. — Our readers will doubtless recollect of reading a paragraph in the *Builder* (about the close of the year before last, if we mistake not) as to a crown of electric light which the Empress Eugenie was said to have had made for her. To this intimation we appended a suggestion of our own, that electricity might be made to operate as a weapon of personal defence, giving violent shocks on any one attempting to touch one so armed. A French invention was some time thereafter spoken of, consisting of an electric lance; to which we objected that if the point of the lance were so near the body of the enemy as to bring its electricity into operation, the electrical apparatus would be scarcely requisite. An invention much more like our original suggestion, however, is described by the well-known "Wizard of the North" (Anderson), in his really well-written and amusing notes on a recent sojourn at Honolulu, in Hawaii, which we see thus quoted (though at greater length) in the *Liverpool Journal*:—"'Ah!' said the King, 'I cannot understand how Mr. Anderson could make my officer scream, and get him in such a fright.' I told his Majesty I thought if he would permit me to have the honour of shaking hands with him, he would not be surprised. The King stretched forth his hand: he started, making a few muscular contortions. I released his hand. His Majesty was astonished, as he had no knowledge of the agent I employed. He insisted that Mr. Wyllie should have a 'practical explanation.' My friend Wyllie could not account for the phenomenon: he reluctantly gave me his hand: of course I could use a little more freedom with the Minister of Foreign Affairs than I could with the King. He writhed and screamed, and begged to be released; and, when free, he said, 'I am not surprised at the officer thinking you the devil; for, if you are not his satanic majesty, you are 'no canny.'' The King requested me as a favour to explain the phenomenon, to which I at once assented. I showed his Majesty that I had a small galvanic battery in my pocket, with the metallic cords communicating up the back of my coat, running down the sleeve of my right arm, also communicating with the palm of the hand; which, with metallic threads within the palm of the glove, produced a powerful shock as soon as the battery was put in action in the pocket (which I worked with a spring the moment the hand was grasped)." A magneto-electric machine, worked by a spring, would perhaps be the simplest and most efficient mode of "astonishing the natives" in this amusing manner.

MEMORIAL WINDOWS IN MARYLEBONE.—The Marylebone vestry have determined, with reference to an application from the minister, the Rev. Mr. Sandham, for leave to put in memorial windows in St. John's Wood Chapel, that a fee of ten guineas shall be charged for each window with inscription for parishioners, and twenty-one for non-parishioners.

CONDITION OF PART OF WORCESTER.—A correspondent complains in strong terms of the condition in which some cottages are left adjoining the Birmingham Canal, where it intersects a principal thoroughfare in Worcester. A retaining wall here, he says, fell some months ago, and left the cottages built above, in a dangerous position. The bridge at the crossing is not very creditable.

ACCIDENTS.—A workman in the employ of Messrs. Brassey, the contractors for part of the Main Drainage, was killed on Saturday morning while engaged in the cutting immediately opposite the police-station in the Old-street, St. Luke's. He was nearly 40 feet below the surface, securing the "shoring-up;" and another workman was at the top of the cutting, sawing off and supplying him with wedges of planks about 4 feet in length for that purpose. These were flung down with the usual caution; but it is supposed that in consequence of the noise made by the engine at work, the voice was not heard, and one of the pieces struck him on the head. The back of the skull was entirely smashed in.——One of the extensive glasshouses and furnaces at St. Helen's Crown Glass Works suddenly gave way recently, and fell, part of the thick walls only being left standing. The immediate cause of the accident is not known, but it is probably from the constant intense heat to which the furnaces are subjected, and subsequent contraction. No person was injured.——A singular accident occurred the other day at Nantes. A climbing boy employed to sweep a chimney, on reaching the top, attempted to introduce himself into the wide tile pipe by which it was surmounted; but the pipe being insecurely fixed, fell into the street, and the boy being inside was killed on the spot.

PORCELAIN.—The construction of the first building of the new Sèvres porcelain manufactory, which is being erected in the park of St. Cloud, is, says *Galignani*, on the point of being completed. While the roof is being placed, the internal arrangements are being effected, and the buildings destined for the ovens and workshops are going on with great expedition. It is in the part of the building fronting the park that the museum containing three complete collections will be installed. The first is composed of foreign porcelain; the second of specimens of French; and the third specimens of the manufactory from its first foundation. The manufacture of porcelain is one of the most ancient arts in the world, for its origin loses itself in the night of time. In 2600 before the Christian era the Chinese had porcelain manufactories. At Babylon, in the reign of Semiramis, enamelled bricks were made, and Egyptian pottery of the same period has been discovered. In 1200, Talcis invented the potters' wheel in Greece; and in 705, Numa Pompilius instituted at Rome a college for potters. About two centuries later, some Greek emigrants carried their processes and their style into Italy, and thence came those articles of *pâte tendre* called Etruscan vases. One hundred years before our era, Gallic, Celtic, German, and Scandinavian pottery was found in tombs. About the middle of the second century the bright-coloured earthenware of the Romans was to be found among the Gauls, and soon after there appeared the dark-coloured earthenware of the Gallo-Romans. In the ninth century the varnished Arab earthenware was introduced; and in 1146, the enamelled ware of Schelestadt. At the beginning of the fifteenth century appeared the manufacture of Lucca della Robbia and the Hispano-Arab terra-cotta; and a century after, the fine majolicas and earthenwares of Florence, the Flemish articles in sandstone, and the earthenware of Henri II. In 1555 the first pieces of Bernard Palissy made their appearance. In 1695 porcelain of *pâte tendre* was first made at St. Cloud. Five years afterwards the manufacture of porcelain commenced in Saxony, Prussia, and Austria. In 1725, England manufactured, for the first time, ware having ground flint as its basis. In 1741, Sèvres produced porcelain of extreme beauty, and that manufacture was introduced into England three years later. In 1770 the Sèvres manufactory produced porcelain of *pâte dure*, and in 1800 England manufactured porcelain of *pâte tendre* with phosphate of lime and boric acid. Such is, in a few lines, says *Galignani*, a summary of what is known of the history of the ceramic art.

THE CATHEDRAL OF AMIENS.—The *Globe's* Paris correspondent states that the cathedral at Amiens has been discovered in so dangerous a state, particularly the vaulted roof, that a celebrated architect has been suddenly summoned to Paris.

GLASGOW.—The Scotia Music Hall, in Stockwell-street, Glasgow, belonging to Mr. James S. Baylis, was opened on the 29th ult. The length of the building, over walls, is 113 feet; breadth, 60 feet; the height from ground to the ridge of roof, 65 feet. The building is in the Italian style. The music-hall contains upwards of three thousand persons. The height from area floor to ceiling of hall is about 40 feet. The architect was Mr. R. Black.

DEATH OF HORACE VERNET.—The celebrated French painter, Emile Jean Horace Vernet, died in Paris on Saturday before last. He was born at the Louvre, June 30, 1789, and came of a race of painters. He served in the ranks of the French army in 1807 and 1809 (was a sergeant at Montmirail), and in the latter year he married, and opened an *atelier* on his own account, glad to undertake any work,—drawing for ladies' fashion-books, drawing bill-heads, and what not. His picture, "The Fashions for 1815" (Waterloo year), the *Morning Post* says, is in the possession of Mr. W. M. Thackeray. His turn, however, was soon to come. He painted in rapid order "The Capture of a Redoubt," "The Barrier of Clichy," "The Dog of the Regiment," "The Trumpeter's Horse" (this latter for Marie Louise), and was decorated with the Legion of Honour, having two years previously obtained the first class-medal for historical painting. In 1825 he was made an officer of the Legion of Honour, and in the following year a member of the French Institute. In 1828 he became director of the Academy at Rome, and in 1842 he was made commander of the Legion of Honour. He was decorated with nearly all the orders of Europe, including the medal of St. Helena. Vernet has been called the Scribe and Dumas of painting. He quitted the classical school and adhered to nature.

TENDERS.

For six houses at Surbiton. Mr. W. C. Reed, architect.—

CLOTH CASES for binding the Numbers, price Two Shillings and Ninepence.

Also a COLOURED TITLE-PAGE, Gratis

SUBSCRIBERS' VOLUMES will be bound on being sent to the Office, at a cost of Four Shillings each.

THE *Illustrated London News*, Nov. 8, speaking of Benson's Watches in the Exhibition, says: "Ranged around the base of the clock were the Watches which Mr. Benson exhibited, and which have been universally admired for the beauty and elegance of the designs engraved upon them. The movements are of the finest quality which the art of horology is at present capable of producing." Chronometer, duplex, lever, horizontal, repeaters, centre seconds, keyless, split seconds, and every description of watch, adapted to all climates. Benson's Illustrated Pamphlet on Watches (free by post for two stamps) contains a short history of watchmaking, with descriptions and prices. It acts as a guide in the purchase of a watch, and enables those who live in Scotland, Ireland, Wales, the colonies, India, or any part of the world, to select a watch, and have it sent free and safe by post. J. W. BENSON, Prize Medallist, 33 and 34, Ludgate-hill, London. Established 1749.—[Advt.]

Can prepare correct details, measure works, or take off quantities. Twenty years' London experience in City and other works.—Address, E. F. M. No. 31, Lower George-street, Chelsea, S.E. Please allow return country post time.

TO ARCHITECTS AND BUILDERS.

A CLERK of WORKS is open to a RE-ENGAGEMENT. First-class testimonials from past employers and reference to present one. Terms moderate. No objection to the country.—Address, SPES, Office of "The Builder."

TO CIVIL ENGINEERS, SURVEYORS, CONTRACTORS, &c.

AN ASSISTANT, acquainted with Surveying and Levelling, and proficient in general, detail, and working Drawings; also finding Quantities, Specifications, Estimates, Quantities, and Superintending Works, desires an ENGAGEMENT. Opportunities of Improvement in the first two items, or a permanency, required more than salary. No objection to go abroad. Good testimonials.—Address, J. A. F. Office of "The Builder."

TO MASTER PLUMBERS AND BUILDERS.

A GOOD PLUMBER and GASFITTER is in want of a SITUATION. Is used to hot-water and steam work, and can be objected to make himself generally useful. In the country not objected to.—Address, A. B. 14, John-street, White Horse-lane, Stepney.

WANTED, a SITUATION as IMPROVER in an architect's office. Can draw plans, elevations, and sections, and has a knowledge of perspective.—Address, F. W. 8, Solrow, Hampstead-road.

TO BUILDERS AND PLUMBERS.

A STEADY YOUNG MAN WANTS EMPLOYMENT, as THREE-BRANCH HAND. Can do gasfitting. Used to a jobbing shop. A constancy preferred. Wages, 27s. G. F 29, Vernon street, Hammersmith-gate, W.

TO CONTRACTORS.

A CONTRACTOR'S CLERK, just leaving an extensive contract, requires another ENGAGEMENT. Highest references. Age, 26.—Address, ALPHA, 25, Military road, Dover.

TO ARCHITECTS.

A FIRST-CLASS CLERK of WORKS, aged 32, is open to a RE-ENGAGEMENT. The most satisfactory testimonials from architects of position, and reference to present employer. Large works preferred. No objection to the country. Salary moderate. Address, 1863, Post office, Oakley terrace, Oat Kent-road, London.

A GOOD DRAUGHTSMAN, COLOURIST, and GENERAL ASSISTANT, who has been nearly four years with his present employer, is open to an ENGAGEMENT. Salary, £—. Address, M. L. Parnell's Library, 21, Upper King street, W.C.

AS HOUSE-CARPENTER and CLERK of WORKS on a Nobleman's or Gentleman's Estate.—A Person, aged 36, who perfectly understands carpenters', joiners', and cabinetmaker's work, and all the work connected with a gentleman's mansion, also steam, water, hydraulics, &c. Having lived in the above capacity with families of distinction, who can be referred to for character, &c.—Address, A. M. A. Atkinson's News Office, Tudor-street, Blackfriars' London.

TO ARCHITECTS, SURVEYORS, AND ENGINEERS.

A YOUNG GENTLEMAN, in his 22nd year, desires a RE-ENGAGEMENT as JUNIOR ASSISTANT. Has devoted five years (three years under articles) to the profession. Unexceptionable references. A moderate salary required.—Address, A. F. 14, Upper Stamford-street, S.

A BUILDER'S CLERK, aged 21, desires a RE-ENGAGEMENT. Is a fair draughtsman and accountant, and fully acquainted with the several branches of the building business. Habits sober, steady, and business-like. Four years' good character from last employer.—Salary moderate.—Address, A. S. H. Kent Cottage, Commercial-road, Peckham, London.

A FIRST-RATE STAIRCASE HAND, of twenty years' experience, is open to a SITUATION, either by day or piecework.—Address, O. BODLEY, No. 12, Church street, Islington, N.

TO PARENTS AND GUARDIANS.

A YOUNG GENTLEMAN is required as an IN or OUT DOOR ARTICLED PUPIL to an Architect and Surveyor.—Particulars of M. HORNE, Esq. 13, Guildford street, Russell-square, W.C.

TO PARENTS AND GUARDIANS.

A LONDON ARCHITECT and SURVEYOR is willing to take an ARTICLED PUPIL, either in or out door. A moderate premium required.—Address, A. Z. Office of "The Builder."

TO ARCHITECTS AND BUILDERS.

A DRAUGHTSMAN and GENERAL ASSISTANT, who has been some years in leading London offices, is open to an ENGAGEMENT, in town or country.—Address, M. X Office of "The Builder."

TO ARCHITECTS AND SURVEYORS.

THOROUGHLY-QUALIFIED and Experienced ASSISTANT is desirous of obtaining a SITUATION. He is conversant with church, school, and domestic architecture; can prepare perspective and other drawings and details, superintend works, and take out quantities. He can also conduct surveys and level. Salary, 3£ per week.—Address, L. E. K. 6, Queen's-circus, Cheltenham.

TO MASON BUILDERS.

A YOUNG MAN, of noble principles, and of a highly chaste and virtuous character, desires an ENGAGEMENT as FOREMAN. Good reference.—Address, C. A. T. No. 7, St. George's-terrace, Pimlico, S.W.

Sold by all Ironmongers, and the Inventor,
GEORGE JENNINGS,
Sanitary and Engineering Depôt, Holland street, Blackfriars-road.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following extract FROM SIR RAYMOND JARVIS, Bart. VENTNOR, ISLE OF WIGHT.—Second Testimonial:—"March 10th, 1852.—In reply to your letter received this morning, respecting the Gutta Percha Tubing for Pump service, I can state with much satisfaction, it answers perfectly. Many builders and other persons have largely availed it, and there is not the least apparent decrease since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."
N.B. From this testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.
THE GUTTA PERCHA COMPANY, PATENTEES,
18, WHARF ROAD, CITY-ROAD, LONDON.

TO CHURCHWARDENS, MILL PROPRIETORS, and OTHERS.—GEORGE FRITH, BUILDER, &c. Coventry, begs respectfully to call the attention of the above parties to his new mode of REARING CHURCH SPIRES, CHIMNEY SHAFTS, and other elevated structures, without the expense of lads or scaffolding. Church spires taken down and rebuilt, painted, repaired, &c. Chimney shafts repaired, painted, and new caps fixed. New vanes and all kinds of lightning conductors applied. Estimates given. References from architects, engineers, &c. Circulars illustrating the principle and containing testimonials sent free on application as above.

TWO MEDALS IN CLASSES 1 AND 10, INTERNATIONAL EXHIBITION.
THE LIZARD SERPENTINE COMPANY, LIMITED.
Works CARLEON COVE, LIZARD, CORNWALL.
Offices—24, ST. JAMES'S-STREET, LONDON, S.W.
The works having been suspended for a considerable time in consequence of the death of the late proprietor, the Lizard Serpentine Company desire to inform Architects, Builders, and the public generally, that having entirely rebuilt the factory, and fitted it with the most improved machinery, they have now resumed operations, and will be happy to furnish estimates, and execute in the best manner any work intrusted to them.
Communications to be addressed to the SECRETARY, No. 24, St. James's-street; or to Mr. THOMAS OAKDEN, 94, King-street, Manchester, who is sole agent for Liverpool and Manchester.

LITTLE CASTERTON FREESTONE.
Apply for prices, &c. to
OCTAVIUS N. SIMPSON, STAMFORD;
and see Specimens at the Office of
Messrs. PINDER SIMPSON & SONS, 29, Savile-row, London, and at the Museum of Practical Geology, Jermyn-street, W.
This stone (which is a perfect oolite), is raised in blocks of any portable size, and is about four feet thick in the bed. It will stand ANY WEATHER, is much used for water-works, and for the building and restoration of churches. When used as ashlar work it is not necessary to place it bed-wise. It works freely with a tooth-saw, and is wrought at a cheaper rate than any stone in the kingdom.

GRANITE.—The Cheesewring Granite Company, Limited, Liskeard, Cornwall.
SHOW ROOMS, 8, CANNON-STREET, E.C.
London Agents—TREGELLES & TAYLOR.

DRINKING FOUNTAINS, MONUMENTS, and ORNAMENTAL WORKS supplied, and ARTISTIC DESIGNS suitable to the materials forwarded on application.
EDGE RUNNERS OF SUPERIOR QUALITY.

POLISHED GRANITES.—TOMBS, COLUMNS, PILASTERS, &c. &c. in RED, BLUE, or GREY GRANITE, supplied by
WILLIAM & JOHN FREEMAN,
27, MILLBANK STREET, LONDON, S.W.

WESTMINSTER MARBLE WORKS.—T. H. HARTLEY & COMPY. Architectural Designers of MARBLE and SCULPTURE WORKS Manufactured by Patent Machinery. Museum and Galleries—Earl street, Horseferry-road, Westminster.—The largest stock of Marble Chimney Pieces in London to select from, executed in a superior style, and sold at a considerable reduction in price.—International Exhibition, Class XC. The largest Marble Chimney-piece in the world.

F. RANSOME'S
NEW PATENT CONCRETE STONE,
Made without burning.
For which the Commissioners of the Exhibition of 1862 HAVE AWARDED THE PRIZE MEDAL, and which for SHARPNESS OF OUTLINE, BEAUTY OF APPEARANCE, DURABILITY, AND CHEAPNESS, stands unrivalled. Manufactured in BLOCKS of any dimensions, suitable for the construction of SEA WALLS, DOCKS, &c. as well as BUILDINGS generally. It surpasses every other material in its applicability to every description of ARCHITECTURAL EMBELLISHMENTS, CAPITALS FOR COLUMNS AND PILASTERS, CHIMNEY PIECES, TRACERIES, BALUSTRADES FOR TERRACES, GATE PIERS, CAPS, AND TERMINALS, Monuments, Tombs, and all kinds of Cemetery Requirements, &c. &c.
For prices, specimens, illustrations, and licenses, apply to Mr. FREDK. RANSOME, 35, Parliament street, Westminster, or Patent Stone Works, Ipswich.

CAEN and AUBIGNY STONE.
FOUCARD, BROTHERS,
Late P. FOUCARD,

Cargoes shipped to order from Caen to any port. Contracts taken for any quantities
Office—10, Three Crown-square, Southwark.

RED MANSFIELD STONE,
WHITE MANSFIELD STONE.
YELLOW MAGNESIAN or BOLSOVER LIMESTONE
Consigned in railway trucks, direct from the Quarries, in blocks not exceeding twelve tons; or worked at the Quarries and delivered free from injury at any railway station.
Mr. ROBERT LINDLEY, Mansfield Quarries, Nottinghamshire.

WELSH SANDSTONE.—GEORGE CLARK & SON, of Wootton Wawen, near Henley-in-Arden, are working a Quarry of this very superior and durable Stone belonging to Cefn Rangel, at Plaspower, Nant, near Wrexham. It is used extensively in Liverpool, Manchester, &c. and can be supplied at reasonable rates at any railway station.

VICTORIA MARBLE WORKS,
38, LOWER BELGRAVE PLACE, adjoining the Victoria Railway Station, and at Commercial-road, Pimlico, London.
JOHN WREN
Begs to inform Architects, Sculptors, Builders, &c. he has OPENED the above extensive Premises with commodious SHOWROOMS, well stocked with CHIMNEY-PIECES of the most modern designs and superior workmanship, and at the lowest possible prices.
N.B.—Estimates given. Country and foreign orders executed with promptness and personal attention.

TWO PRIZE MEDALS AT THE INTERNATIONAL EXHIBITION.
MAGNUS'S ENAMELLED SLATE, obtained the Medal of the Society of Arts, the Prize Medal at the Great Exhibition, 1851, Two First class Medals at the Paris Exhibition, and Two Prize Medals at the International Exhibition of 1862.
Trashy imitations of this beautiful material are being palmed upon the public. Architects are therefore requested to see that the name of "MAGNUS" is upon each article.
Chimney-pieces, Billiard-tables, Table-tops, Baths, Wall-linings, &c. a New Illustrated Catalogue of which can be had at the Pimlico Slate Works, 39 and 40, Upper Belgrave-place, Pimlico, S.W.

ABERDEEN POLISHED GRANITE WORKS Awarded Prize Medal in 1851, Silver Medal in 1855, and Two Prize Medals in 1862.
Red, Blue, and Grey Granite for every description of architectural construction, decoration, monumental, and general purposes.
Apply to Mr MACDONALD, Aberdeen; or to Mr. DAVID WILLET, London Agent, 404, Euston-road, N.W.

W. & J. FREEMAN, Merchants in the various descriptions of STONE, GRANITE, and SLATE, for Engineering and Building Purposes. Supplies direct from the Quarries, by vessel or railway. Direct communication with the principal ports for EXPORTATION. Wharf plans and estimates for special contracts, including quarry work or other labour, forwarded on application.—Office, 27, Millbank street, London, S.W.

SLATES.—MESSRS. JONES & CO. have a STOCK of SLATES of different sorts from the best quarries in Wales; also Slabs and Cisterns; delivered at any station in quantities of not less than five tons.—Price for warded and estimates given on application. Address,
No. 1, BOLD-TERRACE, CHESTER.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars, Fleet-street, City. Sand from above or below Bridge, delivered by the yard or per barge. Ballast, screened or unscreened, by the yard or per large. Stocks Lime, and Old Bricks. Dry rubbish delivered, per barge, in any quantity alongside the Thames.

TWO PRIZE MEDALS OBTAINED AT THE INTERNATIONAL EXHIBITION.
THE LLANGOLLEN SLAB and SLATE COMPANY, LIMITED, have in stock a quantity of enamelled SLATE CHIMNEYPIECES, of the most chaste designs, and at prices ranging from 10s. to 14l. 10s. Their sales now extend throughout Europe, America, Australia, and the East Indies, for these beautiful articles, which are superseding marble. Slate Slabs, Cisterns, Sinks, Filters, and Roofing Slates, always on hand. For further particulars apply at the Company's Depôt, 4, South Wharf-road, Praed-street, Paddington, W.

TWO PRIZE MEDALS OBTAINED at the INTERNATIONAL EXHIBITION—Architects, Contractors, and Builders, before ordering CHIMNEYPIECES, should inspect the Extensive STOCK of ENAMELLED SLATE CHIMNEYPIECES (which, for quality of design and moderate prices defy competition), at the LLANGOLLEN SLAB and SLATE COMPANY'S WHARF, 4, South Wharf-road, Praed-street, Paddington, W.

J. E. ARMITAGE & CO.
(late Bower, Brown, & Co.)

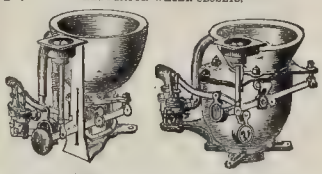
SUPPLIED BY ALL LEAD MERCHANTS AND IRONMONGERS.

INTERNATIONAL EXHIBITION, 1862.
CLASS 35, NO. 6849.

3s. 9d.

The ONLY MEDAL "for STONEWARE" has been awarded to DOULTON & WATTS, LAMBETH POTTERY, LONDON.

In expectation of a greatly increased sale, D. & W. have determined to introduce the enlarged pattern of their ENAMELLED STONEWARE CLOSET-PANS, at the price of the commonest description of earthenware.



Experience has shown that this shape is the most simple and efficient, and that in strength, durability, and cleanliness, it cannot be surpassed by the most expensive closets.

FIGURE "D" STONEWARE CLOSET PAN AND TRAP, 3s. 9d. COMPLETE.

OSLEY POTTERY WORKS, GLASGOW.

Messrs. R. H. PENMAN & CO. from Staffordshire, Manufacturers of the best description of EARTHENWARE GOODS for Sanitary Purposes (vide red in private and public buildings, supply he Trade, Wholesale, at the lowest possible prices for Cash. The Ware sent by their customers to the late Exhibition was highly spoken of.

J. TYLOR & SONS' PATENT REGULATOR WATER-CLOSETS.

Valve. Pan.

The Regulator Valve gives perfect control over the supply of water to each closet, so that, however small the fall of water, perfect flushing is insured. Any number can be worked by one supply pipe. No cisterns, valves, cranks, or wires required. The Closets can be seen in action at the Manufactory, and Illustrated Catalogues had on application to the Manufacturers, J. TYLOR & SONS, Warwick-lane, Newgate-street, London.

VENTILATION—PURE AIR.

Sheringham's Day and Night Ventilator  for the admission of Pure Air

THROUGH THE EXTERNAL WALL.

With single pulley, from 6s. each; with leading pulley, from 8s. 6d.

These Ventilators are arranged so that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 187 and 189 (late 117 and 118), Union street, Borough, London; and of all respectable Ironmongers, Builders, &c.

SALES BY AUCTION.

Payments:—For Purchases under 20*l.* cash; above that sum, approved bills at three months will be taken or the usual discount.

CHIPPENHAM, WILTS.—To BUILDERS, CAPITALISTS, and OTHERS. IMPORTANT INVESTMENT.

MESSRS. PARRY & SON have received instructions from the Executors of the late Mr. Richard Morris to offer for SALE by AUCTION, in one or more lots, in the month of FEBRUARY next, at the Angel Hotel, in Chippenham, an important FREEHOLD PROPERTY, consisting of valuable building ground, intended by adjoining the first class Railway station at Chippenham, and the junction of two branch railways; together also with 17 substantial well built Dwelling houses, excellent building stables, coach-house with 2 rooms and 3 lofts over the same, and a veterinary forge, forming a street called St. Mary's place, and all on the property. Here and in the railway station has been formed, at great expense through the land, a 9 inch cast iron sewer throughout the whole extent capable of receiving drainage from the houses to be erected; and the Great Western Railway Company are under covenant to maintain the same as a road to the Railway station. The property connects the Station Hotel with the principal residential part of the town which is contiguous thereto. The land and site of the building thereon is situate on the Cirencester and Chippenham turnpike road, and is also adapted for a large hotel, and a plan of arrangement is at present in the hands of the Solicitors for the Company, and Messrs. Cleveland Cattle Market. The Auctioneers are thereby enabled to offer the property as a whole, and purchasers may be allowed

DIRECTOR.

The Rev. G. B. Atkinson, M.A. Principal of the Collegiate School; late Fellow and Assistant Tutor of Trinity Hall, Cambridge.

PROFESSORS.

Chemistry, Metallurgy, and Geology—James Allen, Ph.D. F.C.S. of the Universities of Giessen and Berlin.
Engineering and Mining—J. Thompson C.E.
Mathematics, Natural Philosophy, and Applied Mechanics—Rev. G. B. Atkinson, M.A.

The Sheffield School of Practical Science and Metallurgy will afford a complete scientific and practical education to students who are destined to become civil, mechanical, or mining engineers, or manufacturers of any kind. Its object is thoroughly to discipline the students in the principles of those sciences upon which the operations of the engineer, metallurgist, or manufacturer depend.

The education will be given by means of systematic Courses of Lectures, by Class-books and Class Instruction, by Practical Teaching in the Laboratory and Drawing room, and occasionally by Field Excursions. The School of Practical Science and Metallurgy will be conducted in the Buildings of the Sheffield Collegiate School. The two Institutions, although both under the superintendence of the Rev. G. B. Atkinson, Principal of the Collegiate School, are, however, entirely distinct.

A detailed Prospectus, containing Syllabuses of all the Courses of Lectures, and all other information, arrangements for boarding, &c. may be obtained by application to the Director

THE SCHOOL WILL OPEN IN THE FIRST WEEK IN FEBRUARY, 1863.

WATER COLOUR PAINTERS' LANCASHIRE RELIEF FUND.—The EXHIBITION will from MONDAY next, the 2nd of FEBRUARY, to the SATURDAY following, be OPEN ONLY to CONTRIBUTORS, SUBSCRIBERS, and PATRONS of ART to whom invitations have been sent.

Subscribers and Contributors may obtain extra cards on application to JAMES FAHEY, Hon. Secretary.

German Gallery, 168, New Bond-street.

Subscriptions will continue to be received at the Committee room, 5, Waterloo-place

PHOTOGRAPHIC EXHIBITION.—The NINTH ANNUAL EXHIBITION of the Photographic Society of London is OPEN DAILY, from Ten till Four, at the Gallery of the Society of British Artists, Suffolk-street, Pall-mall East Admission, 1*s.*

ROYAL AGRICULTURAL COLLEGE, CIRENCESTER.—The next SESSION commences on SATURDAY, FEBRUARY 7th. Students entering the College at this time are eligible for Election to a Scholarship.—For prospectuses and further particulars apply to the Principal.

COMPETITIONS.

TESTIMONIAL to Sir BARTLE FREERE, K.C.B.—To ARCHITECTS.—DESIGNS, to consist of complete working drawings and detailed estimates, are invited for a BUILDING to be erected in Kurrachee, Scinde, to be called the Freere Hall, for which premium to the author of the selected design, which will thus become the property of the Freere Hall Committee. Competitors must send their plans under a motto addressed to the Joint Secretaries, Freere Hall Committee, Kurrachee, Scinde, on or before the 30th of APRIL next, accompanied by a sealed envelope containing name and full address of the designer. The Committee will use every possible care in returning the plans to the unsuccessful competitors; but they will not be answerable for loss or damage to the plans in transit. A plan of the site may be seen on and after MONDAY next, the 26th inst. at the Offices of Mr. BRUNTON, M.I.C.E. Chief Engineer Scinde Railway, 31 and 60, Commercial Sale Rooms, Mincing lane, City, who will furnish full particulars of the funds available and of the building requirements; also information as to the local prices of materials and workmanship.

CONTRACTS.

ST. MARYLEBONE, January 24th, 1863.—To BUILDERS, SEWER CONTRACTORS, &c.—Notice is hereby given that the Vestry of the Parish of St. Marylebone, in the County of Middlesex, will MEET in the BOARD-ROOM of the Court-House of the said Parish, on THURSDAY, the 5th day of FEBRUARY, 1863, at ELEVEN o'clock in the forenoon, to receive TENDERS from persons willing to CONTRACT for LAYING DOWN a 12 inch PIPE SEWER in Langford place, in the said parish of St. Marylebone. Further particulars may be known, and drawings and specifications, and forms of Tender, seen, on application to the Vestry Surveyor, Mr. ROBERT SCACE, at his daily attendance at the Court-house, from TWELVE till ONE o'clock. The Tenders to be delivered to the Vestry Clerk, at the Court-house, at or before ELEVEN o'clock in the forenoon of THURSDAY, the said 5th day of FEBRUARY, sealed and endorsed "Tender for Pipe Sewer in Langford place," and no Tender will be received after that hour. The contractor to find satisfactory securities for the performance of the works, and to pay the expense of the bond and contract. The Vestry will expect the parties tendering, or some persons on their behalf, to be in attendance at the time of opening the Tenders. The Vestry do not pledge themselves to accept the lowest or any of the Tenders.—By order,

W. E. GREENWELL, Vestry Clerk

CONTRACTS.

WAR DEPARTMENT CONTRACT.—NOTICE to BUILDERS, &c.—TENDERS are required for ERECTING the WORK, &c. that may be required in the following Trades, at Barnsley Barracks, from 1st APRIL, 1863, to 31st MARCH, 1865, viz.: Bricklayers, Masons, Paviors, Carpenters, Plasterers, Slates, Plumbers, Smiths, Ironfounders, Painters, Glaziers, Paper-Hangers, and Gasfitters.

Parties desiring to Tender for this Contract must leave their names at this Office, on or before the 10th proximo, and pay the sum of 7*s.* 6*d.* for the schedule and form of Tender.

The Secretary of State does not bind himself to accept the lowest or any Tender.

Royal Engineer Office, 225, Stretford-road, Manchester, 14th January, 1863.

NOTICE.—To CONTRACTORS and IRONFOUNDERS.—The Corporation of Cork will receive TENDERS from competent parties for the ERECTION of a CAST-IRON ARCH BRIDGE, according to plans and specifications to be seen at the City Engineer's Office, No. 20, South Mall, Cork. Sealed Tenders to be forwarded to the Town Clerk, Cork, on or before the 16th day of FEBRUARY, 1863, marked on the outside, "Tender for Iron Bridge." The Corporation do not bind themselves to accept the lowest or any Tender.—By order,

ALEXANDER M'CARTHY, Jun. Town Clerk.

Office, 33, South Mall, Cork.

BARNSLEY LOCAL BOARD of HEALTH.—Water-Works Department.—CONTRACT No. 2. To Contractors for Pipe-Laying.—The Local Board of Health of Barnsley, in the County of York, are desirous of receiving TENDERS for LAYING DOWN about 14 MILES in length of CAST-IRON SOCKET PIPES and other CASTINGS. Specifications may be seen, and Forms of Tender may be had, on application to me, or to Mr. THOS. HAWKSLEY, C.E. 30, Great George-street, Westminster, S.W. on or later MONDAY, the 12th day of JANUARY instant; and Sealed Tenders must be delivered at my Office, not later than MONDAY, the 2nd day of FEBRUARY next, endorsed "Tender for Pipe Laying." The Board do not bind themselves to accept the lowest or any Tender.—By order,

WM. H. PEACOCK,
Barnsley, 6th January, 1863. Clerk to the said Local Board.

THE VESTRY of the PARISH of CHELSEA, in the County of Middlesex.—SCAVENGERING and WATERING KENSAL NEW TOWN.—The Vestry of this Parish will MEET in the Board-room at the Vestry Hall, King's road, on TUESDAY, the 3rd day of FEBRUARY next, at THREE o'clock in the afternoon precisely, to receive TENDERS in a sum in writing to CONTRACT, pursuant to the terms of a Draft Contract now lying for inspection at the Vestry Hall aforesaid, and which may be seen on application to the Vestry Clerk, for WATERING the STREETS comprised within the out ring District, Kensal New Town, from the 1st of MARCH next to the 1st day of OCTOBER next; and for the REMOVAL of the SLOP from the said District, from the 1st of MARCH next to the 1st day of MARCH, 1864. The Tenders are to name one amount for both Scavengering and Watering, and are to be upon printed forms, which may be obtained at this Office. Parties Tendering must appear personally at the day the Tenders are opened, and the parties whose Tenders are accepted (if any) will have to pay the cost of and incidental to the preparation of the Contract. Sealed Tenders, signed by the proposed Contractor, with the names and description of two sufficient sureties for the performance of his Contract, are to be left at this Office on or before TWELVE o'clock on TUESDAY, the said 3rd of FEBRUARY next. The Vestry do not bind themselves to accept any Tender.—By order,

CHARLES LAHEE, Vestry Clerk.

Vestry Hall, King's-road, January, 1863.

THE VESTRY of the PARISH of CHELSEA, in the County of Middlesex.—SCAVENGERING and WATERING.—The Vestry of this Parish will meet in the Board-room at the Vestry Hall, King's road, on TUESDAY, the 3rd of FEBRUARY next, at THREE o'clock in the afternoon, precisely, to receive TENDERS from persons willing to CONTRACT, pursuant to the terms of a Draft Contract now lying for inspection at the Vestry Hall aforesaid, and which may be seen on application to the Vestry Clerk, for WATERING the STREETS comprised in one or other or both of the Districts in the parish (exclusive of Kensal Town), from the 1st MARCH next to the 1st day of OCTOBER next, and for the REMOVAL of the SLOP from one or other or both of the said districts, from the 1st of MARCH next to the 1st day of MARCH, 1864. The Tenders are to name one amount for both Scavengering and Watering, for each district, and are to be upon printed forms, which may be obtained at this Office. Parties Tendering must appear personally on the day the Tenders are opened, and the parties whose Tenders are accepted (if any) will have to pay the cost of and incidental to the preparation of the Contract. Sealed Tenders, signed by the proposed Contractor, with the names and description of two sufficient sureties for the performance of his Contract, are to be left at this Office on or before TWELVE o'clock on TUESDAY, the said 3rd of FEBRUARY next. The Vestry do not bind themselves to accept any Tender.—By order,

CHARLES LAHEE, Vestry Clerk.

Vestry Hall, King's-road, January, 1863.

TO CONTRACTORS.—SHEERNESS DRAINAGE WORKS.—CONTRACT, No. 1. OUTLET PIPE.—The Sheerness Local Board of Health hereby give notice, that they are prepared to receive TENDERS from persons willing to CONTRACT with them for PROVIDING and LAYING DOWN about 1,400 LINEAL FEET of CAST IRON FLANGED and SOCKET PIPES, 24 inches in diameter, with tidal flap—Plan, sections, and specification, may be seen, and form of Tender obtained, by applying to Mr. JAMES HUNT, the Surveyor of the Board, at his Office, No. 10, Montague-terrace, Sheerness. Sealed Tenders, indorsed "Tender for Outlet Pipe," are to be delivered at this Office, not later than THURSDAY, the 12th FEBRUARY, 1863, at SIX o'clock in the evening.—By order of the Sheerness Local Board of Health,

EDWARD FELKIN, Clerk.

Office of the Local Board of Health, Sheerness, January 15, 1863.

[*For remainder of Contracts see next Page.*

CONTRACTS.

TO STOVE and RANGE MAKERS, IRONMONGERS, &c.—The Guardians of the Poor of the Stepney Union will meet at the Ratcliff Workhouse, York-street West, Commercial-road East, on THURSDAY, the 5th day of FEBRUARY next, to receive and open TENDERS from persons willing to supply and fix STOVES throughout the new Workhouse of the Union at Bromley, Middlesex. The Specification may be inspected after the 27th instant, at the Offices of Mr. JARVIS, the Architect, No. 29, Tranquil-vale, Southwark, where also may be obtained printed forms of Tender (which alone will be received) and full particulars.—By order of the Guardians,
22nd January, 1863. W. H. SWEPSTONE, Clerk.

SOUTH-EASTERN RAILWAY.—CONTRACT for WORKS.—The Directors of the South-Eastern Railway invite TENDERS from competent Contractors for the CONSTRUCTION and MAINTENANCE of the SECOND SECTION of the DIRECT RAILWAY between London and Tunbridge, extending from the latter place to Halstead, a distance of about twelve miles. Plans, sections, and specifications of the works may be inspected at the Engineer's Office, London Bridge Station; copies may be had on payment of 10s. 6d. per set), on and after TUESDAY, the 27th of JANUARY instant. Tenders to be delivered to the Secretary not later than TEN A.M. on THURSDAY, the 12th of FEBRUARY next, when the Directors will meet to open and consider the same. The Directors do not bind themselves to accept the lowest Tender, and sureties (if) will be required.—By order,
S. SHILES, Secretary.
London Bridge Terminus, January 16, 1863

TO BUILDERS.—Persons desirous of TENDERING for ADDITIONS and ALTERATIONS to BARRINGTON HALL, near Hatfield Broad Oak, in the county of Essex, are to see the plans and specifications by applying at the estate office after the 26th instant. Sealed Tenders to be sent in, according to the form supplied, by the 24th of FEBRUARY next. Sureties to be required by order of the Court of Chancery for the due performance of the works for an amount of not less than 12,000*l*. The lowest or any Tender will not necessarily be accepted.
EDWARD BROWNING, Architect.
Broad-street, Stamford, 20th January, 1863.

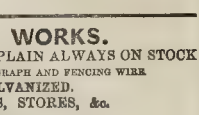
CONTRACTS, 1863.—Parish of SAINT GEORGE, Hanover-square.—Such Persons as are willing to CONTRACT with the Vestry of the said Parish for the following WORKS and MATERIALS, for One Year, from the 25th day of MARCH, 1863, viz.:—
Supply of Flints and Gravel,
Supply of Guernsey Granite,
Purchase of the Cinders and Ashes,
Carting away the Slop and Sweepings of the Streets,
Furnishing Carts and Horses for Day-work,
Spreading Water in the Streets,
Masons' Works,
Paviors' Works,
Supply of Paving Materials,
Supply of Thames Ballast, Land and Hogging,
Supply of Workmen's Tools and Hammers for Stone Breaking, and Repairs of the same,
Smiths' Works,
Chaffiers' Works,
Supply of Base Brooms,
Drain Pipes,
Shoeing of the Horses,
Veterinary Care of Horses;
may deliver in PROPOSALS, sealed up, at the Offices of the Board Room, Mount street, Grosvenor square, or at Board Room, 1, Ebury Bridge road, Pimlico, on or before SATURDAY, the 14th of FEBRUARY, 1863. Printed Tenderforms are to be had. Note that all Proposals must be made upon, and strictly in accordance with, the printed forms of Tender, to be obtained at either of the above offices.—Further particulars may be obtained on application to Mr. E. C. RICHMAN, Surveyor, at the Office, 1, Ebury Bridge-road, any morning between the hours of NINE and ELEVEN o'clock. Contracts to be prepared by the parish Solicitors, at the expense of the Contractors; and the Vestry do not bind themselves to accept the lowest or any Tender.—By order,
JOSEPH HENRY SMITH, Clerk to the Vestry

BOW ROAD. CONTRACT for SEWERS. Builders, Contractors, and others are informed, that new and plans and specification are now open for inspection at the offices of the British Land Company, 14, Moorgate street, E.C., between the hours of TEN and FOUR o'clock, from MONDAY, the 2nd, to THURSDAY, the 5th of FEBRUARY, when tenders are to be delivered on or before MONDAY, FEBRUARY 9th, addressed to W. E. WHITINGHAM, Secretary, and endorsed, "Tender for Sewer Works at Bow."
14, Moorgate street, January 26, 1863.

TENDERS are required for TAKING DOWN and RE-ERECTING a HOUSE in Jermyn-street, St. James's. The Drawings and specification may be inspected, on application to Mr. JOHN ELORE, Architect, St. Michael's-place, Brompton, on MONDAY, FEBRUARY 2nd, from TEN till THREE o'clock.—The proprietor does not bind himself to accept the lowest Tender.

BOARD of WORKS for the HACKNEY DISTRICT.—Notice is hereby given, that the Board of Works for the Hackney District will meet at the Townhall, Church-street, Hackney, on THURSDAY, the 12th day of FEBRUARY next, at ELEVEN o'clock in the forenoon, for the purpose of CONTRACTING for the EXECUTION of the SEWERS WORKS under Contract numbered 17, in Green-lanes, Stoke Newington, and Hall-street, Clapton.
No. 17 CONTRACT will comprise 960 feet run of 3 feet 9 inches by 2 feet 6 inches, and 240 feet run of 3 feet by 2 feet, of BRICK SEWERS; and 1,185 feet run of 15 inch PIPE, and 500 feet run of 9 inch PIPE SEWER, or thereabouts
Plans and specifications may be seen on and after MONDAY, the 2nd day of FEBRUARY next, until TUESDAY, the 10th day of FEBRUARY, and forms of Tender, with any information, to be supplied to Mr. JAMES ALLEBURY, C.E. Surveyor to the Board, at his office, Townhall, Hackney, between the hours of NINE and ELEVEN a.m. The Tenders must be sealed, and endorsed "Tender for Sewer Works, No. 17," and addressed to the Clerk, and delivered at the Townhall on or before WEDNESDAY, the 11th day of FEBRUARY. The parties tendering, or their representatives, must attend at the Board on THURSDAY, the 12th day of FEBRUARY, at ELEVEN o'clock precisely. Persons contracting will be required to enter into a contract or bond in sufficient surety for the due performance of the contract; and the Board do not bind themselves to accept the lowest or any Tender.
RICHARD ELLIS, Clerk.
Jan. 29, 1863.

ABERGWILI, Carmarthen.—To BUILDERS and OTHERS.—Persons desirous of submitting TENDERS for the several WORKS required to be done in BUILDING NEW NATIONAL SCHOOLS, CLASS ROOMS, and OFFICES, complete, on the site of the present schools at Abergwili, near Carmarthen, are informed that the drawings and specifications will be for inspection at the Bank of Ivy, at Abergwili, from THURSDAY, 12th FEBRUARY to SATURDAY, 28th inst., where Tenders, on forms supplied, to be delivered, by post prepaid, addressed to the Architect, Mr. R. J. WITHERS, 31, Doughty street, London, W.C. on or before MONDAY, 2nd MARCH, and of whom further particulars may be obtained. The lowest or any Tender will not necessarily be accepted.
W. E. JAMES, Vicar of Abergwili.
Abergwili, Carmarthen, 26th January, 1863.



VILLAS, SURBITON.—BUILDERS desirous of TENDERING for Three Pairs of Semi-detached VILLAS at Surbiton may see the plans and specification at the Office of the Architect, W. C. REED, 34, Old Broad street, E.C. Money will be advanced as the work is proceeded, as per agreement

TO BUILDERS. — Persons desirous of CONTRACTING for the ERECTION of PARSONAGE HOUSES at the undermentioned places respectively, viz. Frogmore, near St. Alban's; Melton Ross, near Barnetby; Thurlby, near Lincoln; and Newark, may communicate with Mr. CHRISTIAN, Architect, 8a, White-hall-place, London. Application to be made before FEBRUARY 10th, but Mr. CHRISTIAN does not bind himself to accept, or reply to, any such application.

LYSS, HAMPSHIRE.—To BUILDERS and OTHERS.—Builders desirous of TENDERING for the ERECTION of a PARSONAGE-HOUSE, at Lyss, near Petersfield, are requested to send their names forthwith to the Architect, Mr. R. J. WITHERS, 31, Doughty-street, London, W.C. accompanied by reference, when they will be informed of the terms of contract, and those selected will be furnished with copies of the bills of quantities. The Tenders to be forwarded to the Architect, by post, on or before SATURDAY, 14th FEBRUARY.
F. H. FREETH, Incumbent of Lyss.
Lyss, near Petersfield, January 24, 1863.

BOROUGH of BLACKBURN. — The Corporation of this Borough is prepared to receive TENDERS for the CONSTRUCTION of BRICK and PIPE SEWERS, together with MANHOLES, GULLIES, and other WORKS connected therewith, comprised in Contract No. 6, of the Sewerage Works of the Borough. Persons desirous of Tendering for the above, may see the specification and drawings, and obtain all requisite information, on application to Mr. BRIERLEY, Borough Surveyor, at his Office, Townhall.—Sealed Tenders addressed to the Town Clerk, and endorsed "Sewer Contract No. 6," may be sent to the Town Clerk's Office, not later than SATURDAY, the 14th day of FEBRUARY next. The Corporation will not be bound to accept the lowest or any Tender.—By order,
HENRY SAWARD, Town Clerk.
Townhall, Blackburn, January 26, 1863

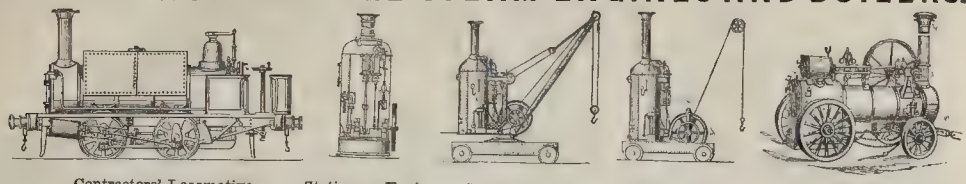
The PRIZE MEDAL for SUPERIOR PATENT SASH and BLIND LINES, was awarded to JAMES AUSTIN, at the INTERNATIONAL EXHIBITION, 1862.
AUSTIN'S IMPERIAL PATENT SASH and BLIND LINES.
To BUILDERS, CARPENTERS, and BLIND MAKERS.
J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his
IMPERIAL PATENT FLAX SASH-LINES
of which he is now making extensive additions, and he strongly recommends that in all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently cannot give so much satisfaction to the consumer.
They can be obtained of all Ropemakers, Ironmongers, Merchants, Factors, and Wire-dress Houses, in Town and Country.
ESTABLISHED 1774.



PATENTED HOT AIR APPARATUS in CAST-IRON, consisting of prismatic tubes, to be applied to chimneys with flues and heat-conduits. By this system is obtained health, durability, a clear fire, security, economy.—An apparatus in use can be seen, every day, at the Office of M. LEWAL, Nos. 5 and 6, Philpot lane, City.

DAY and GAS-LIGHT REFLECTOR MANUFACTURER.—THOMAS FOX, 98, Hatton Garden, E.C. These Reflectors never tarnish, require no cleaning, and are the most effective and durable yet presented to the public. All kinds of Bent Glass Silvered.
N.B.—The usual discount to builders and the trade.

Patentees and Makers of Hydraulic Armour Plate Bending and Testing Machine.

NEW PATENT PORTABLE STEAM ENGINES AND BOILERS.

Contractors' Locomotive. Stationary Engine. Steam Crane. Hoisting Engine. Agricultural Engine.

STATIONARY ENGINES.

THESE Engines require no Chimney-Shaft, nor Building whatever, a Cast-Iron Ash-pit forming the SOLE-PLATE, and they may be set up anywhere and started at once. Being very carefully made of the best materials, they may be perfectly relied on to work satisfactorily and, from their self-completeness, they may be erected and set to work by any ordinary mechanic to instructions supplied. These improved Engines have the great advantage of being applicable to a variety of purposes, the small space they occupy rendering them available where ordinary Engines cannot be used.

PRICES OF ENGINES AND BOILERS COMPLETE.

Delivered Free in Glasgow, Hull, Liverpool, or London.

1	Horse Power,	Cylinder	3½in.	×	6½in.	Stroke	...	...	£45	9	Horse Power, Cylinder 9½in. × 16in. Stroke	...	... £180

Boilers, either plain, dome-shaped, or tubular, with all mountings complete, at half the prices quoted above for Engine and Boiler.

Prices of Steam Cranes, Hoisting Engines, Contractors' Locomotives, Agricultural, Pumping, and other Engines, on application.

*** These New Engines (which are in every respect superior to those J. B. B. & CO. formerly sold) are being everywhere very favourably received. They are already successfully working in various parts of England, and numbers have been sent abroad, particularly to the Continent and the West Indies. *They are warranted, in every case, to be satisfactory.*

ST. PANCRAS IRON WORK COMPANY,

OLD SAINT PANCRAS ROAD, LONDON, N.W.

PATENT WROUGHT-IRON STABLE FITTINGS

SHOULD BE ADOPTED FOR THE FOLLOWING REASONS, viz.:—

That the BREAKAGES in Cast-Iron Fittings are numerous, and that one fracture from a kick, or other cause, may occasion an injury to a Horse, and involve a loss equal to the entire expense of fitting up the Stable. The fear of this has led to the use of wood, and, in the case of Cast-Iron GUTTERS, to the adoption of another and less effective mode of draining.

PATENT ENAMELLED TOP PLATE MANGER, WITH RACK AND WATER-TROUGH,

The whole of which, except the Rack, being enamelled, can be kept as clean as a DINNER PLATE.

PATENT FASTENINGS FOR THE DOORS OF LOOSE BOXES.

These Catches and Hangings work easily, are self-acting, and cannot be put out of order: by their use all projections by which horses are often blemished are rendered impossible; advantages peculiarly their own.

THE PATENT HARNESS FITTINGS

Keep the Harness and Saddles in shape, and are constructed so as to admit the air getting to the underside of them when hung up, thereby insuring a quick and perfect airing from any wet or moisture.

EVERY DESCRIPTION OF STABLE FURNITURE.

ESTABLISHED 1826,

Request the attention of Architects, Builders, Decorators, &c. to their VARIED and EXTENSIVE STOCK of ENRICHMENTS, CENTRE FLOWERS, VENTILATORS, MOULDINGS, CORNICES, PILASTERS AND PANEL DECORATIONS, &c. &c.

DESIGNS AND ESTIMATES GIVEN FOR THE ENRICHMENTS IN PUBLIC OR PRIVATE BUILDINGS. ENGRAVED DESIGNS FOR VENTILATORS, CEILING, FLOWERS, &c. SENT FREE ON APPLICATION. PRINTED PATTERN BOOKS, WITH PRICES, CAN BE OBTAINED AT THE WORKS.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London atmosphere.

ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Barytes from ten to thirty per cent. Whether it be for the name of "Improved Zinc Paint," or at the number Two or Three qualities, no workman can produce good work with such material. Workmen who have once used the Patent Zinc Paint will never willingly use any other Paint for their best work.

CHEAPNESS.—Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.

EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK & SON,
WHITE LEAD, OIL, PAINT, AND VARNISH WORKS, 21, LIME STREET, LONDON.

UNIVERSAL EXHIBITION, PARIS, 1855.

W. RIDGWAY, 169, Piccadilly; and all Booksellers.

The Builder.

VOL. XXI.—No. 1043.

Walks and Talks in Rome, near the Walls.

THE Diocletian Thermæ form a suitable point whence to set out on our rambles with intent of visiting those antiquities that lie nearer to the circuit of fortifying walls than to the populous centres of Rome. From the planted level ground extending before these ruins and the Carthusian cloisters we pass through a gateway into the demesne of the Villa Macao, a pleasant *rus in urbe* of the Jesuits, part of whose property here was not long since purchased by Government as a site for the erection of barracks; appropriate indeed for such purpose; being a level area, grass-grown, but uncultured and pathless, within whose inclosing walls we find ourselves on a stage of many historic memories, the scene of strange and tragic vicissitudes,—that Pretorian camp which was formed under Tiberius by Sejanus for the twelve cohorts first organized by Augustus as the imperial body-guard. Here took place the stormy outbursts and intrigues of military despotism: here the empire itself was actually set up for sale to the highest bidder: here were raised the shouts against Nero and in favour of Galba, overheard by the former in his miserable flight to the villa of Phaon, the last day of his life. Destined to behold changes ere long, this site may be remembered with more interest in its hitherto conditions than as the rendezvous of Pontific troops. It is bounded on three sides by fortified walls, with square towers at intervals; and in the midst of the eastern limit rises a towered gateway, whose ingress is built up. The other side of the great quadrangle, 5,400 feet in circumference, corresponding with the city, and where was the principal entrance, has totally disappeared; and we may trace even in these ruins the intent rather to keep in awe than to provide for the protection of the citizens from the stronghold of military sway. Under Maximus and Balbinus the people attacked the Pretorians in this camp, and forced them to capitulate after cutting off the supply of water brought hither by leaden conduits, such as found, in one example, when some excavations were made here in 1742. Constantine's benevolent purposes towards his subjects never perhaps declared themselves more distinctly than in the blow he gave to profligate tyranny by the dismantling of these castra, which thenceforth remained obsolete and useless till the time of Honorius, who, when the new fortifications were commenced in the year 403, caused the outer lines of walls and towers to be included within those works of defence, though the inner, fronting the city, was now thrown down as no longer serviceable.

This scene of ruin has, in its hitherto condition, been one of the most mournfully desolate, silent, and deserted in Rome; and we shall not forget its absolutely depressing effect on the spirits when we first visited it; an effect, indeed, increased by outward influences; being at the hour of a stormy sunset after a winter's day. But on the 14th June, 1861, was presented a strange and brilliant contrast, to awaken the echoes and vary the objects here by all the pomp of military and sacerdotal array, with stirring music and solemn chanting; when, in the presence of the pope, the cardinals, numerous prelates, the mounted troops, and a vast throng of other spectators, was laid the first stone of the new barracks. After these pontific soldiers had passed through their evolutions and paid their military honours to Pius IX., who looked down upon the scene from a lofty throne surmounted by a colossal statue of St. Peter—the plaster copy of that ancient bronze in the apostle's great basilica,—litanies and prayers succeeded to the fanfaronade of martial music; and at the close was chanted the apostolic benediction, with the same formula as at Easter; while the summer sunset lit up the gorgeous scene, clothing with purple tints the Sabine and Alban hills, whose graceful outlines rise in view above the dark boundary of those time-worn walls.

The northern line of these fortifications presents on the inner side a series of lofty arcades, below which, on the ground-floor, open a suite of small vaulted chambers, some retaining on their brick walls the stucco, still in parts tinted, of different colours, but without designs. In the recent works for laying foundations have been uncovered some chambers, brick-lined, and of narrow dimensions, under the actual surface, the mouth of a well or conduit, the pavement of a road, and a few architectural fragments. The fortifications are in the best style of lateritial brickwork, as in other imperial ruins anterior to the time of Caracalla; but those lower chambers along the north side have the end-walls of *opus reticulatum*.

A short walk brings us hence to the gardens of the Barberini Casino, a dilapidated but picturesque mansion, standing conspicuous on a spur of the Quirinal, above the valley between that mount and the Pincian. Along these slopes, in the hollow below, and over the demesne of the opposite Massimi Villa, extended the luxurious gardens of Sallust, called Horti Pretiosissimi, with a circus and many pleasure-houses, which, after the death of that wealthy historian and that of his nephew, sole heir to his estates, were purchased for imperial use, and became the favourite sojourn of Vespasian, of Nerva, and Aurelian. Here the last of those emperors was wont to fatigue himself and his horses by constant exercise in the superb portico (of which no vestige remains) called Miliarensis, from its length of 1,000 feet; and these gardens, when the Honorian fortifications were raised, became included within the new boundary of the city, the naturally suggested limits, as marked by the direction of the Quirinal slopes, being disregarded for the sake of thus protecting them. Soon, however, had they to suffer the devastation, after which they were never restored to pristine magnificence, when the Goths came, under Alaric, and first of all, it seems, directed their fury against this spot, the nearest inhabited, or at least conspicuous, centre; and the Salarian gate by which they entered. Procopius indeed tells us that this demesne was laid waste by the fire they kindled. Its ruins principally consist of a series of lofty parallel halls, vaulted, but with little of their roofing left, against the Quirinal declivities, their masonry partly concealed by plantations and creepers, the cavities of their dark chambers overhung by ivy or weeds. These are supposed to be either the substructures to the tiers of seats in the circus, or (as seems more probable from their extent and elevation) the lower chambers to one portion of the habitable buildings. One better-preserved ruin is circular, with a domed interior, surrounded by spacious niches at regular intervals; and this has been regarded as a pavilion, or loggia, for distinguished spectators at the circus games. Other antique buildings rise on the terrace above,—one converted into a cottage, one into a barn,—in brickwork of good style, lateritial and reticulated; but of the "marvellous and stupendous ruins" described by Flavio Biondo, nothing remains,—at least with character entitled to be so distinguished. Through the upper part of these grounds extends the ridge of the Agger of Servius, interrupted by the long street leading to the Porta Pia,* but rising beyond to its highest point in the gardens of the Negroni villa (near Diocletian's Thermæ), where its elevation is hence seen, crowned picturesquely by a cluster of cypresses. This agger rises at its northern extremity just upon the ridge of the Quirinal, over the valley within the Barberini grounds, where is indicated the site of the Porta Collatina, renowned in history by the entrance of the Gauls in the year of the city 365, and by the defiant approach of Hannibal in 543. On the Pincian slopes, opposite to the other Sallustian ruins, are some remains of a boundary-wall that may here have formed limit to the circus. From this garden was removed, under Pius VI., the obelisk now on the platform before the Trinita de' Monti church on the Pincian. In the last century was discovered, at the depth of 20 palms, a pavement entirely of giallo antico, described by Venuti ("Antichità Romane," 1765), supposed to belong to the great portico of the imperial buildings in these gardens. Within recent years no excavations have been made here; and this historic site, so interesting, amidst surrounding features so beautiful, has been vulgarized to the purposes of growing cabbages, the dingy old casino partly serving as a wine-shop;—no attempt at the ornate, or even at tidyness, in any detail; yet still, ill-kept and neglected though it be, it is one of the pleasantest retreats for strolling or studying;—where we may enter *ad libitum*, undisturbed by custode or cicerone.

The more aristocratic and *soignés* gardens of the Colonna Palace entered from the ample esplanade of the Quirinal, occupy the higher terraces and western slope of that hill, united to the Palace at its foot, on the Piazza SS. Apostoli, by a wooden bridge across a back street. On one of their pleasantly shaded terraces lie some fragments of marble architecture, stupendous in dimensions, the largest of their description in Rome, a Corinthian architrave and frieze, with the angle of a pediment in richly-ornate style, sole remains left of that temple to the Sun-god, built by Aurelian, and known in Mediæval periods as the "Frontispiece of Nero," which stood, in a far more considerable mass of ruin than what we now see, till the time of Sixtus V.; and in the work of Marlianus, "Urbis Romæ Topographia" (1588), is a rude woodcut of this antique, with the same quaint title ascribing it to Nero, showing the massive erect wall of a cella, with triangular entablature, and a lateral front, with cornice and two pilasters, the whole leaning against a high square tower, no doubt some Mediæval fortress here allowed to crush or conceal the Classic structure, neither tower nor ruins being now in any portion erect. Farther advancing on these terrace-walks, we suddenly come in sight of a more extraordinary monument, in still conspicuous construction of brick, an immense quadrate edifice, thrown up against the declivity, and pierced by square windows at different heights along its still compact walls, being the shell of the great public staircase ascending the Quirinal from the Campus Martius, supported on vaults, whose vestiges are still traceable among the houses near this hill's base, anciently used for wine-cellars, and alluded to by Vopiscus in his account of Aurelian's temple to the Sun. Into this edifice we look down, from the terrace near the level of its uppermost windows, so that the startling effect is presented of a vast abyss suddenly yawning below where we stand, no glimpse of the construction from without having prepared us to appreciate its dimensions. Though degraded into the uses of a barn, it is still, in the main structure, perfect. Lower, where the hill steeply slopes westward, we may enter an obscure court round a wash-pool,

* When this street was opened under Pius IV., the Agger was in part destroyed for the levelling of its width

and see a wall-structure of massive quadrilateral tufo stone blocks, and another of brickwork above, propping up the precipitous bank; and if, indeed, this be (as inferred by authorities) a portion of the Servian fortifications (the stonework at least), we must marvel that such an antique has not been rendered approachable save through the miry and bad-smelling den we have to penetrate for a view of it. Even in these Colonna gardens (as elsewhere in Rome), we are offended by contrasts of magnificence and meanness, the grandiose and the slovenly, though the quiet and beauty of the scene are indeed attractive.

To place ourselves on the track of antiquities in the Campus Martius, we must descend from the heights into the modern and least characteristic regions, the populous and commercial Rome, scarcely in any features more ancient than the seventeenth century, and indeed less picturesquely distinguished than the generality of Italian cities. Yet from elevated spots even this aspect of the Papal metropolis is imposing: the multitude of domes and belfry-towers seem an aërial city above that of man's habitations; and the view, though comprising least of antiquarian interest, from the planted terraces of the Pincian, from the gardens of St. Onofrio or the Janiculan, or (of all the finest attainable) from the loggia summit of the Ludovisi Villa, is one to fascinate and impress. It is a fact mentioned by Andrea Fulvio, curious in local history, and in its accordance with Rome's present religious temper, that the chance discovery in the Anno Santo, 1525, of a Madonna picture long hidden in some obscure smoky chamber near the Tiber, led to the founding of this city's most busy modern quarter, or at least to considerable enlargement in this direction, around the spot so consecrated to superstition; and two new regions were soon known as Lombardia and Schiavonia, because mainly peopled by natives of northern Italy and from the eastern Adriatic shores. The now *quasi*-Anglicized Piazza di Spagna was described by Fulvio, 1527, as "a wide concave space, or area, where are some vestiges of the arrangements for seats, to accommodate spectators at public shows, so that they might look on from about half the height above," namely, of the Pincian Hill; this writer mistaking the site for that of the naumachia of Augustus, placed by better authorities on the opposite Tiber shores, the Trestevere as now designated.

Turning from the Corso into the Via di Pontifici, we enter the court of a large gloomy mansion, where at every angle projects the segment of a considerable circular pile in antique *opus reticulatum*, here well preserved; and another portion of the same ruins, to greater extent, is seen in the court of a *palazzo* near the St. Rocco church, on the river side, Via di Ripetta; here being observed, also, a tablet set within the walls, recording the last works effected, 1773, for disencumbering the ruins of the much-maltreated mausoleum of Augustus. With the aid of Strabo's description we may call up to mental vision a clear picture of this monument in its pristine magnificence: clothed in white marble, a tumulus of earth rose above its architectural circuit, crowned by the bronze statue of the first emperor. Beyond extended a grove with public avenues; and in front was the inclosure for the cremation of the dead, also of white marble, girt by iron balustrades, and planted inside with poplars: at the entrance stood two obelisks, now re-erected, one before St. Maria Maggiore, the other on the piazza opposite the Quirinal Palace: fourteen chambers ranged round a great rotunda in the interior; and the diameter of the whole was about 230 feet.

The first ashes laid here were those of Marcellus, the nephew and destined heir of Augustus;* the last, those of Nerva; but the last funeral (if the strange orgies might be called such), that in which the mangled and headless body of Rienzi, after being exposed to every insult in the streets, hung up from a balcony for forty hours, was burnt within this area, whither it had been carried by order of the Colonnas, with the assistance of the whole Jewish population then in Rome (A.D. 1354. See Muratori, *Antich. Ital.*, t. iii.). From the date of Nerva's decease the Mausoleum remained closed till violated first by the troops of Alaric, who broke into it in hope of finding treasures. Thence we hear no more of it till the thirteenth century, when (sharing the fate of most Roman monuments) it became a fortress held by the Colonnas long known as the "Augusta;" and destined to sustain a tremendous shock when attacked by the people (1167) in their rage at the idea that the same family had given support to their enemies the Tusculans, by whom a Roman force had just been defeated. By that onset the inner walls and the cupola (or whatever was the roofing in its then condition) were reduced to crumbling ruin; and the solid mass of *débris*, fallen in, now formed a basement to the upper story, whose uncovered area we may still ascend to. That devastation did not, however, disqualify the edifice from being again defended as a castle, in 1241, and by a cardinal of the same Colonna house, who here held out against the party in the interest of the Pope, till besieged, and his stronghold taken, by the senator. Poggio saw these ruins transformed into a grassy and partly cultivated mound, on whose slopes grew the vine; and about a century later Fulvio witnessed the removal of various marbles and epigraphs from their circuit. Eventually they were purchased, first by the Soderini, then by the Correa family, who converted the highest part, that area above the fallen masonry, into an amphitheatre for *al fresco* entertainments, jousts, equestrian shows, fireworks, and sometimes dancing! What a mockery to the majestic memories of this "Imperial Tomb!" In 1780 was first here exhibited the spectacle of bull and buffalo baiting, which had already become a favourite amusement of the Roman populace, and continued to be eagerly frequented within this arena, till forbidden for the interests of morality by Pius VIII. About the end of that century were undertaken the last excavations on this spot by the then proprietor of the monument and theatre, Marquis Vivaldi Armentieri, but with no notable results. Still are continued, in the fine season, the performances, equestrian or dramatic, in the strangely-profaned mausoleum, known in the Roman parlance as the *dufileatro Correo*, and a movable stage rises on its arena when the artists of the Circus are not engaged to gallop or exhibit their feats in this "pit," around which rise stone seats, ascending stepwise from a podium. But the antique character is not completely sacrificed to such whimsical appliances. Three vaulted chambers are kept in their original state, with walls of compact reticulated masonry, shown by a *custode* here on duty; and in the largest of those otherwise vacant interiors we see on sale a variety of such objects as abound in every old-curiosity shop of Rome,—terra-cotta lamps, phials, bronzes, fragments of wrought marble, &c. In the fourteenth century was found here, and removed, the *cippus* now in the court of the Capitoline Palace, that contained, according to its extant inscription, the ashes of the high-souled Agrippina, wife of Germanicus. In recent years was found, near S. Carlo, on the Corso, the assumed site of the *bustum*, for cremation of the bodies before their ashes were laid in this imperial sepulchre, a beautiful urn, of Oriental alabaster, now in the Vatican, with a *cippus* bearing the name of Livilla, sister to Caligula.

In the noisy Corso no vestige reminds us of the classic Past: but we often walk this gayest of Rome's streets with thoughts of sorrow for vanished splendours, of indignation for their wilful destruction. It is a scene that forces on us the conviction how far from a worthy guardianship over the treasures of antiquity has been exercised by the papacy in earlier ages. Under the houses along the upper, or northern, part of this street, Canina attests the existence of ruins left by the superb portico of Agrippa, which extended, with seven files of arched colonnades, far along the Campus Martius, completed, after its founder's death, by his sister Pola. The mausoleum of Sylla existed in ruins on the adjacent Piazza del Popolo till swept away by Sixtus IV.; and its marble fragments are now seen on the basements of the two square towers flanking the Porta del Popolo, built under that pope, 1475; this incrustation showing traces of injuries sustained by the removal of metallic cramps, in many cavities along the surface filled by irregular marble blocks, some with marks of chiselling. Least of all can we forgive the demolition of the noble arch (for such it appears in extant engravings) raised to Marcus Aurelius after his victories in Germany and Sarmatia. This, a subject of strange mistakes and misnomers, was known to the Mediæval citizens successively as the Arch of Tripoli, Trofoli (both perhaps corruptions from "Trofei," trophies), and the Arco di Portogallo, from the residence in a contiguous palace of a cardinal, Portuguese ambassador to the popes. Fulvio supposed it to be in honour of Domitian: Nardini (*Roma Antica*) was the first writer to determine its real dedication beyond dispute; and, indeed, the figure of the virtuous emperor, in reliefs, fortunately saved from its ruin, is at once recognisable by comparison with the heavy antique busts of M. Aurelius. In 1662 was ordered its demolition, by Alexander VII., for the sake of widening the street; and especially with view to the convenience of carnival-racing, &c.;—a frivolous motive recorded in a tablet on a house-front, opposite the Palazzo Fiano, just where the arch spanned this street. Among the sculptures preserved from its attics, two reliefs were removed in the sixteenth century, as Flaminius Vacca tells us. These and four others, "The Triumph and Sacrifice of the Emperor," "The Apotheosis of Faustina," &c., are now on the landing-places of the stairs in the Conservator's Palace in the Capitol; in the museum of the same palace, two figures of winged Victory; in the court of the Sapienza University, the conquered Germany, a sculpture that adorned the arch's keystone; and four columns of verd' antico are divided between the church of S. Agnese (Piazza Navona) and the Corsini Chapel at the Lateran. The column of Marcus Aurelius, long supposed, and still popularly styled that of Antoninus, stood, till the time of Sixtus V., on a double basement with an interposing *fascia*, sculptured genii and festoons, a portrait-relief of the emperor, and the name *Divi Antonini* alone preserved from the original epigraph, on this lower member, till the sixteenth century visible to a depth of 6 feet below the actual level of soil around, which at present rises above the ancient level no less than 16 feet, the flight of steps on which this monument rises being entirely buried. An epigraph found in 1777 (now at the Vatican), mentions the office of *custode* to it, and bears clearest testimony to its dedication in the title given,—*Columna Divi Marci*. Till the ninth century it had probably suffered no other detriment than loss of the imperial statue at its apex, one of the countless art-treasures carried away by Constans II. in the year 663. The column, with its adjacent ground, was bestowed by Pope Agapitus II., in 995, on the Benedictines of St. Silvestro, a neighbouring church, by whom it was let on lease, but afterwards recovered through means of their abbot, in 1119, who launched a threat of excommunication against whoever should again presume to alienate it from the monastic property; and the curious document with this inhibition, in barbaric Latin, is still to be read in the portico of that church, whose cloisters are now a French barrack.

The monks of St. Silvestro apart, Mediæval proprietors seem to have disregarded this memorial of the most philosophic among emperors. Petrarch accords to it the mere ejaculation, "*Hæc Antonini Columna!*" Poggio states that it had suffered by lightning; but the defacements of its sculptured shaft, on the western side of which the reliefs can scarcely be distinguished in any group, though elsewhere far better preserved, are by other writers (see Nibby) referred to the conflagration of the Norman invaders in 1084. Among their subjects is the celebrated story of the "Thundering Legion" (now much effaced), as a vision of Jupiter Pluvialis pouring down rain and tempest to assist the Romans and confound the Marcomanni forces on the battle-field; and it is remarkable that the miracle claimed by Catholic historians for the prayer of the Christian soldiery on that occasion, is *also* claimed on the pagan side as supernatural answer to the emperor's intercessions!* The first restoration of this column, ordered or ever thought of, was that under Sixtus V., by Fontana: and at the same time was raised to its apex the gilt bronze statue of St. Paul, modelled by De Servi; the basement, reduced to its present form, now receiving the inscriptions which, on one side, perpetuate the popular error as to its original dedication:—"*M. Aurelius Imp.—Imp. Antonino Pio Patri, dedicavit.*" The engravings of Sante Bartoli and Piranesi, rather than the vain attempt to examine the originals on the spot, must be relied on for appreciating this monument in its valuably historic sculptures, of which Emil Braun says,—"The *Germanis* of Tacitus could not be better illustrated than by these life like and characteristic figures." Piranesi (*Le Colonne Trajana ed Antonina*) gives a restoration of the double basement and its sculptures, assuming that on one side of the *fascia* were figures of Victory, or Genii, holding oak garlands; on the other, the military enterprises of M. Aurelius; and from his work we learn that these reliefs were actually *scraped off*, in order to clothe the basement with travertine blocks, when the restoration of Sixtus V. was carried out. At different heights up the shaft we

* "Fulmen de cœlo precibus suis contra hostium machinamentum exorsit, suis pluvia impetrata quum sitl laborarent."—Capitolinus, Marc. Aurel. See also Baronius, anno 176.

" Quantos ille virûm magnam Mavortis ad urbem
Campus aget gemitus! vel quæ, Tiberine, videbis
Funera, quum tumulum præteriabere recentem!"

See the well-known passage of Virgil, which moved imperial auditors, when he read it, to tears.]

see the large gaps made by the tearing out of metal cramps,—one Mediæval outrage from which this monument suffered, like others in Rome. We must regret the total destruction of the temple to this virtuous emperor, of whom it was commonly said, after his death, "bestowed by the Gods, he had returned to the Gods" (*a diis accomodatus, ad deos redisset*). Certain it is that an aggregate of superb edifices raised by the two Antonine emperors on the Campus Martius filled the area now occupied by the Piazza Colonna (so named from the column in its centre), that of Monte Citorio and Di Pietra. The Chigi palace flanking an entire side of the first among these piazzas, marks the supposed site of that temple decreed by the Senate to M. Aurelius; and nearly on the same line with this palace is the wide façade of the police courts (Palazzo Monte Citorio), at whose front angles are several masses of ancient masonry, in regularly hewn travertine,—perhaps the sole remains left visible of that monumental fane. Under the gardens of a convent near, was dug up, in 1704, the real column of Antoninus Pius, with a large square basement, surrounded by sculptures in high relief, of great beauty, this being now in a court of the Vatican; and the granite shaft itself was broken up for the repair of the obelisk brought by Augustus from Heliopolis, when Pius VI. ordered its re-erection, 1789, on the spot where it now stands opposite the Monte Citorio palace. A single stunted column of cipollino, about 3 feet high, is pointed out as sole remnant above ground of Adrian's temple, raised by Antoninus Pius, in an obscure lane, Picolo della Spada d' Orlando, which received that romantic name perhaps early in the Middle Ages, from the designation, "Sword of Orlando," popularly given to this isolated fragment. Platner, indeed, mentions other pillars of the same temple, set into the houses on the Piazza Capranica near, which having sought for in vain, we conclude to have been hidden or swept away by recent buildings. The same emperor dedicated other temples to deified personages of Augustan rank, male and female; to Marciana, sister of Trajan; and her daughter Matidia, all in this vicinity; and that of Marciana has been recognized by German authorities in the noble colonnades built into the front of the Dogana (Piazza di Pietra), long assumed to be either the Temple of Antoninus Pius himself, raised by his adoptive son, or that to Neptune, founded by Agrippa in the purlieus of his portico. Those eleven Corinthian columns, of the Luna marble (from Carrara), first brought to Rome by Julius Cæsar, have fluted shafts almost entire, though the capitals and bases are much impaired, and an architrave, with dog-tooth moulding, little injured except at the extremities, where it was restored in stucco when this ruin, unfortunately for its effect, was enclosed in an unsightly screen of walls under Innocent XII. Entering we see, in an open court, an overhanging mass of formless marble, and the much-worn remnant of a coffered vaulting; immediately connected with that outer colonnade, ascertained to belong to a Peripteros edifice, at each of whose fronts were fifteen, at the sides eight such pillars. The modern piazza takes its name ("Of Stone") from the heaps of marble and stone that long lay accumulated here from that Temple's ruins in the Middle Ages; and in the cellars of the Cini Palace, at its extremity, are portions of walls in immense peperino blocks, believed to belong to the sacred inclosure round the Temple. A few paces hence bring us to the site, on the Corso, where that street enters the Piazza Sciarra, of the Arch of Claudius, whose modern fate is one of the strangest examples of neglect and outrage against antiquity in Rome. Andrea Fulvio tells here it was demolished in his own time (therefore before 1527, when he wrote); and from Flaminius Vacca we learn that in 1565 excavations were made on the spot, and many sculptured marbles disinterred, in which the head of Claudius was recognizable. These were in part purchased by one Cesarini, and placed in his garden on the Esquiline Hill; but in the greater part, no less than 136 cartfuls of fragments, bought by that sculptor himself. Again, in 1641, the research was renewed by Prince di Carbonaro, owner of the palace above this spot; and at a depth of 22 palms below the pavement was found a vast accumulation of marbles, sculptures, fluted shafts, &c., which the civic magistrates inspected, still underground, by taper-light. Before these could be transferred, intimation came from the Pope, Urban VIII., that he intended to reserve the right of purchase as Roman law guarantees to the State. On this the private speculators lost their interest in the object of research: the prince suspended his excavations; and all these art-treasures were actually left where found, again interred under the street, neither the Pontiff nor other authorities interposing to save them! The collection of Vacca is totally dispersed; and Cesarini's purchase has had a like fate, save in two reliefs fortunately exempt, and now at the Borghese Villa; their subject, an allocution by the Emperor to his troops; and though the figures (life-size) be much mutilated, and no head be entire, a grandeur and freedom of style in these works afford proof how superior the Roman art-school was under Claudius. The monument was decreed to him by the Senate after his victories in Britain; and its epigraph, recording these successes, is another relic preserved from its front, now set into a garden-wall behind the Barberini Palace: the terms, of haughty complacence, are such as an Englishman may smile at, in reading what Rome then thought of us.

With this we must bring to an end our series of notices of Rome, under the head of "Walks and Talks." Under other headings we shall from time to time endeavour to give account of the present state of some of the structures remaining in the city, and the results of recent excavations.

WINDSOR CASTLE.

REPORT ON THE SEWERAGE, WATER-SUPPLY, VENTILATION, AND SANITARY WORKS.

*Warming and Ventilation.**

THE Castle is warmed on Price's system, which is simple in construction, safe in use, and perfectly cleanly and wholesome; the fresh air being warmed (not burned) by means of an extensive surface of iron warmed by water at a low temperature, 70 to 80 degrees.

Tunnel entrances open at various points where fresh air can enter, free from any source of contamination, and pass on in a continuous stream to the warming apparatus, where it is heated so as to pass on to the corridors, halls, and rooms, at a temperature of about 65 degrees Fahrenheit.

The tunnels and fresh-air passages are preserved perfectly clean, the side-walls and arches being annually whitewashed.

The existing arrangements for warming and ventilating Windsor Castle were commenced in the year 1842. The apparatus most recently added (1861 and 1862) are in the Lancaster and Winchester Towers.

The numbers and situations of the warming apparatus are as under:—

	Numbers.
Private apartments	7
State apartments	5
Norman Tower	1
Round Tower	1
Henry III. Tower	1
Lancaster Tower	1
Winchester Tower	1
Total	17

Up to the year 1850, means of ventilation by windows in Windsor Castle were very limited and defective. Even in the Royal apartments the upper portions of the windows were fixed: lower casements alone could be opened, so that by far the largest amount of air spaces in the rooms, when they were in use, contained vitiated air, comparatively stagnant. 240 of the top sashes in these windows have been made to open; and 50 of the upper sashes in large windows, which could not be reached by other means, can now be opened, even by a lady, with perfect ease. This is accomplished by the intervention of machinery specially contrived and adapted for this purpose.

It is of the utmost importance that all lofty rooms should have ample means of ventilation at or near the ceiling, and experience demonstrates that no plan is so good, simple, easy, and safe, as windows which can readily be opened.†

Water Supply.

The supply of water to Windsor Castle is abundant in volume and constant in service.

On the bank of the Thames, to the north of the Castle, a water-wheel was erected by the celebrated engineer, John Smeaton, and recently a steam engine has been added by Mr. James Simpson, under whose direction the general supply apparatus has been improved, and the distributing apparatus arranged. A complete and effective fire service exists.

Water, at all times clear and bright, is pumped from wells sunk in the gravel; by a water-wheel ordinarily, which works night and day, and by the steam-engine, in cases of fire, flood, drought, or frost.

There is a storage reservoir situate at the Cranbourn Tower (*Crane Bourn*, or stream), Great Park, some 140 feet above the level of Windsor Castle Quadrangle.

This reservoir contains one million gallons of water, and is maintained full, so as to be ready for use in case of fire.

The wells at the waterworks are, one of 5 feet diameter, and two of 4 feet diameter. They are lined with cast-iron cylinders to a depth of 25 feet, so as to exclude surrounding subsoil water, and are open at the bottom. By this arrangement, this portion of the valley of the Thames becomes a natural filter-bed, 25 feet in thickness.

There is one set of "three-throw" pumps, 8½ inches diameter, and 18 inches stroke, and two sets of "three-throw" pumps 6¼ inches diameter and 12 inches stroke. The ordinary speed worked is twelve strokes per minute. The volume of water forced to the Castle is about 8,200 gallons per hour, or nearly 200,000 gallons per day.

The waterworks supply Windsor Castle, Royal mews, Frogmore, Royal kitchen gardens, the Shaw Farm, and dairy-farm homestead, as also the lodges in the Home Park.

The steam-engine is 16 horse-power. The rising main, from the pumps to the storage reservoirs at Cranbourn Tower, is 10 inches diameter. This main passes through the Castle Quadrangle; 7-inch branch mains pass to the roads, court-yards, and terraces. There are branch pipes, 5 inches and 4 inches diameter, carried into the Castle, on which fire-valves are fitted with keys, hose, hand-pipes, and nozzles complete.

There are 95 stations in the interior of Windsor Castle, and 206 fire-valves provided, with apparatus complete.

There are 33 hydrants, with 2½-inch screw pipe outlets, and boxes complete, on the roads, in the courts, yards, and on the terraces.

The fire-services within Windsor Castle are fixed in the halls, on the staircases, and in corridors and passages, at such distances as to allow of any two commanding all the rooms and spaces betwixt them.

There is a working engineer regularly employed, whose duty it is to clean, repair, and maintain the working parts of the machinery in order, both of the water-wheel and of the steam-engine, as also the valves and hydrants.

There is a turncock to attend to the distribution of the water, and to regulate the supply, from time to time, to the various points as required.

For flushing the drains a man is placed at each sluice-valve, so as to insure a simultaneous discharge of water.

There is a fire brigade, provided with a uniform, composed of ten of the workmen employed at the Castle. They are drilled once each month, going round all the stations to see that every part of the apparatus is in working order.

Royal Mews.

The Royal Mews is fully sewered and drained. The sewers are regularly flushed, and all the drains are fully ventilated.

There are forty water-closets in connexion with the Royal Mews.

There is full light by windows, and ample ventilation by windows and by air chambers to all the W.C.s.

There are thirteen of Watson's ventilators in the passages of servants' apartments.

There are twenty-two of Watson's ventilators in the stables and riding-house.

N.B. Watson's ventilators are upon the double-action syphon principle: a continuous current of air is established.

The clerk of works informed me that every complaint of stench is brought under his notice, and that to the best of his recollection, no complaints had been made of the sewers and drains. At times there have been complaints as to sinks and W.C.s; but on investigation the causes were found to have arisen from improper use or abuse of these apparatus. In all such cases the places are cleaned, and any defects remedied at once.

The servants' residences at the Royal Mews are not on a good plan. There is a block building, several stories in height, having an internal passage longitudinally on each floor. This passage is reached by common stairs at each end, and is also lighted by windows similarly placed.

The separate residences are on each side of these passages, having doors opening opposite. For purposes of ventilation there are open gratings in the upper floors of the passages, giving communication betwixt one passage and the other.

The washhouses are small, and the steam from the boiling water ascends into the passages, to the

---

* See page 41, *ante*.

† Flues do not ventilate rooms sufficiently. The air in single flues is frequently stagnant, or has a reverse action, a "down-draught."

annoyance of the residents. (This will be at once altered.)

The barrack-like arrangement described has many inconveniences, and no advantages but that of economy of surface space. Any noise in the common passage disturbs several families, and this tends to disagreement.

As shown in the details given, all possible care has been taken in sanitary works to improve the building; but it never can be other than a bad plan made the best of.

Detached washhouses for the use of the residents in these block tenements may easily be provided; and by removing the heat, steam, and slop from the main building a great sanitary good would be effected.

Flushing Tanks.

The arrangements at Windsor Castle for flushing sewers and drains are of the most complete kind. The sites on which the tanks are placed command the upper ends of the sewers and drains, and the volume of water at command is ample, and the means to liberate it well devised.

	Gallons at command.
Tank in courtyard: Norman Gate ..... This water is discharged through a sluice-valve 10 inches in diameter.	8,100
North Terrace ..... 4-inch sluice valve.	1,789
East Terrace ..... 12-inch sluice-valve.	35,311
Summit of Brunswick Tower ..... 4-inch stand-pipe.	3,139
Round Tower..... 3-inch sluice-valve.	1,875
Winchester Tower..... 3-inch sluice-valve.	350
Total gallons	50,476

There are in addition sixteen sluice-valves on the water-supply mains from 3 inches to 2 inches diameter, opening into branch drains.

At the Royal Mews the arrangements are as under:—

	Gallons at command.
One tank, containing ..... 6 or 2 inch sluice-valves.	2,025
One tank, containing ..... six 2-inch sluice-valves.	4,050
One tank, containing ..... two 24-inch sluice-valves.	3,375
One tank, containing ..... two 24-inch sluice-valves.	2,812
One tank, containing ..... one 3-inch sluice-valve.	625
Making 15 sluice-valves, and a total in gallons of.....	12,887

There are, in addition, three sluice-valves from the water mains, 3 and 2 inches diameter, connected with branch drains.

Windsor Castle drains and sewers are flushed every morning.

At Adelaide Terrace, in connexion with the main sewer belonging to the Crown, there is a large flushing tank, on which are placed two "pen-stocks" complete.

This tank is brought into use on alternate days by the sewer man, who has no other employment than to attend to the sewers and preserve them clean. The pen-stocks insure a head of water of 4 feet; and this, when necessary, is brought into use four times within the twenty-four hours.

Water from the river Thames flows into and through the main sewer of the borough, and thence into and through the Crown sewer.

This flow of water is never less than 18 inches in depth in dry weather, but ordinarily is some 3 feet in depth.

The borough sewer is flushed on alternate days with the Crown sewer, and this insures the main sewers belonging to the Crown being flushed every working day.

Capt. Vetch devised the flushing arrangements as part of his plan, and the numerous additions subsequently made have been in the spirit of the first design. The object aimed at throughout is to remove, immediately, by water, and before any injurious changes of fermentation or putrefaction can take place in the sewage beneath the Castle or in connexion with it, all soil or slop refuse from the drains and sewers to the outlet into the river Thames. This is now accomplished effectively and regularly.

The question of use and utilization of this sewage on meadow lands in the district may be taken up before long. I have no doubt as to the practicability of such plan. A cause of pollution will be removed from the river, and the land will be enriched. A line of conduit will remove the operation to a safe distance from the Castle, at a reasonable cost.

Complaints have been made of nuisances arising from want of proper main sewerage and efficient house drainage at certain new houses near Adelaide-terrace, "King's-road." The Cranbourn brook flows into the head of the large flushing tank, and any sewage discharged into Cranbourn is liable to pass into the flushing tank, and, at times, during local floods of rain, to be washed through the tank at the lower overflow, and so cause nuisance on the surface. Some of the property in this district is on land belonging to the Woods and Forests Department, and it is highly desirable that proper works of sewerage and drainage should be enforced.

In all districts where the suburbs of a town are extending there is a liability to nuisance from new roads remaining unformed and new streets remaining unsewered.

In such cases new houses are drained either into cesspools; on the surface; or, out and into the nearest watercourse or ditch. This latter appears to be the case at the new houses near Adelaide-terrace.

Remarks.

In making the suggestions and recommendations embodied in this Report I do not wish it to be understood that all the various forms of alterations are required in the Castle. On the contrary, I wish most distinctly to record my opinion that very little improvement can be added to the sanitary works connected with Windsor Castle. During my inspections I have been extremely gratified to find evidences of thought, ingenuity, and constructive skill in every alteration made during the last fifteen years. The late Prince Consort brought his great artistic taste, constructive skill, and knowledge in architectural and in sanitary questions to aid the indefatigable exertions of the Board of Works and the resident Clerk of Works, in effecting an entire remodelling of the domestic arrangements within Windsor Castle. This Report is necessarily brief, and consequently in some respects imperfect, but it details and indicates a vast amount of work done within a short period, and most of this work is connected directly or indirectly with sanitary improvement.

At this present time I believe that Windsor Castle is the most complete in sanitary works, appliances, and arrangements, of any large building in existence.

The sewerage and drainage are ample and efficient. The volume of water supplied is relatively large, and the quality is as good as water having sixteen degrees of hardness can be. The service is at high pressure and is constant; the points of distribution are numerous, convenient, and in good working order.

There is a distinct fire apparatus, maintained in working order, and a regularly trained body of firemen. The warming of the Castle is admirably arranged and in perfect condition, and means of ventilation are numerous; in many instances most ingenious and generally efficient. The question of ventilation is, however, by far the most difficult to settle in a climate so variable as that of England. Fixed and constant means of ventilation are required to keep up internal motion in the air, and to promote unceasing change; and if outlets and inlets are not judiciously placed, guarded and secreted, they will be tampered with and blocked up. Warmth is constantly obtained, in modern houses and buildings, at the sacrifice of health. Unceasing motion and change in atmospheric air are necessary to healthy respiration. Stagnation is produced by inadequate means of ventilation. The great problem to be solved in internal warming and ventilating arrangements is to have a comfortable warmth of fresh air, neither much above nor much below sixty degrees Fahrenheit. A less temperature in rooms containing sinks and water-closets is, however, allowable.

The Castle Court Guard-room, now in course of adaptation and construction, will, in many respects, be an improvement. The conveniences (water-closets and urinals) are, however, too much confined, and unless the fullest possible arrangements of a fixed character are provided for ventilation, they will be a cause of nuisance to the inmates of the Guard-room. Places of this sort, used regularly by large numbers of men, should be detached; that is, a divisional wall, having an intervening space, should be provided, and as much open space as the construction of the roof will allow should be made at the highest points. The place is not capable of being fully lighted, except by artificial means.

Recommendations.

The new works, alterations, and appliances recommended are as herein detailed:—

The introduction of charcoal air filters at all available points to disinfect sewage gases.

Covering the portion of main sewer now open near its outlet into the Thames, and forming a low-water outlet, by means of cast-iron pipes continued from the sewer to below the surface level of the water in dry weather. This alteration will abolish a nuisance which now exists near the private road on the margin of the river. This work has been estimated and provided for, and will be done immediately.

The main branch sewers from the Castle to the main sewer to be isolated and ventilated.

The steep gradient, which is now continuous, to be broken, and a flap to be placed at the end of the upper sewer, with a vertical shaft, and double ventilation. This arrangement detaches the lower levels from the buildings on the higher levels, and diminishes the risks of gaseous contaminations.

All branch drains to have means of ventilation outside the main walls of the Castle; and, where practicable, a flap cover to prevent in-draughts from the drains and sewers.

All sink-pipes, where practicable, to have a broken connexion with drains outside the main walls. This arrangement is made by forming a small shaft from the drain, and allowing the sink-pipe to enter. The shaft from the drain to have means of external ventilation.

All water-closets and rooms in which sinks are placed and used, to have means of permanent ventilation, which can neither be seen nor be tampered with. An area of twelve square inches communication with the external air ought to be the least space allowable. A narrow slit-like opening will be better than a square or circular opening, as the area acted upon will be longer, and direct draughts less felt. If rooms in which water-closets and sinks are placed depend for ventilation on windows, which can be opened or shut at pleasure, such windows will frequently be closed, to the exclusion of all means of change of air, other than from or into the adjoining corridors and rooms.

Disinfectants are requisite at servants' urinals and closets. Water alone will not preserve such places free from taint.

All closets and places used for storing fuel, wood, coal, and coke, should be fireproof, and have means for full external ventilation. Material liable to spontaneous combustion, such as lamp-oil, grease, turpentine, waste, and dirty rags, used in cleaning lamps, &c., should be placed in vessels of iron or other metal, and be removed at short intervals. But all rooms in which lamps are cleaned and trimmed should be fireproof and isolated.

A considerable portion of Windsor Castle has been made fireproof so far as is practicable; but one secure precaution against the possibility of any extensive conflagration will be to break the Castle up into sections by fireproof divisional walls from the basement through the roofs, and by double iron or other metal doors of communication. Such arrangements can be carried out without in the least diminishing any domestic conveniences or comforts. Varnished pine timber in floors is specially dangerous, and continuous timber floors (or partitions) in corridors and passages, in cases of fire, facilitate rapid means of combustion. If it is not practicable to remove all the timber in corridor floors and partitions, it is possible to break the continuity of such floors and partitions, at intervals, so as to prevent flame running along unchecked.

Roof-lights and internal reflectors are sometimes causes of fire. A rough unpolished piece of glass may concentrate the sun's rays, like a lens or "burning glass." Metal, in contact with pine wood, may be heated by the sun's rays in this climate almost to the point of combustion. Wood so placed becomes in time "dry as tinder," and quite as combustible. A considerable portion of the roof to Windsor Castle is covered with sheet-lead, and during very hot days it may be advisable to water it.

Covering timber with lead is injurious to the timber, as tending to rot. An air-tight covering of any material for a roof is liable to act injuriously, just as air-tight doors and windows may be injurious; there must be provision for ventilation, by unceasing change of air, to avoid mischief to health and injury to timber.

In concluding this Report, I beg most respectfully to recommend that complete sets of plans be prepared and indexed for future reference. There are the plans, as made from time to time, in detachments, and there is all the information requisite, but not in so clear, complete, and condensed a form as is desirable. It is impossible for any of the present officers to undertake such a work and continue to fulfil their present duties, but they may probably find time to direct and

superintend any surveyor or architectural draughtsmen engaged to do such work. Some of the best men in the Ordnance Survey Office may with advantage be employed to make a complete set of plans of Windsor Castle as it now exists,—its sewers, drains, basements, floors, lands, and appurtenances. ROBERT RAWLINSON.

OUR WEIGHTS AND MEASURES.

THE present state of weights and measures is unsatisfactory. Some attempt at improvement was made by the Acts of 5 & 6 George IV., and 4 & 5 William IV., which profess to prohibit the use of any other weights and measures than those of the Imperial standard, but permit those to be used which have been certified of Imperial capacity, though not of the form required by the Acts, and fix no particular shape for the future. After the 1st of January, 1835, all heaped measures were forbidden to be used, as well as all weights made of lead and pewter. The legal stone was to consist of 14 standard pounds avoirdupoise weight, the hundredweight to consist of 8 such stones, and the ton to consist of 20 such hundredweights, and all contracts made by any other stone, hundred-weight, or ton, were declared to be null and void.

These enactments also provide that all articles sold by weight are to be sold by avoirdupoise weight, except gold, silver, platina, precious stones, and drugs, in retail, which are to be sold by Troy weight. The measure known by the name of the Winchester bushel, and also the lineal measure called the Scotch ell, and all other customary or local measures, are by these Acts abolished, and persons are liable to a fine of 5*l.* who use any other measures, &c., except those of the legal description.

By avoirdupoise weight, all goods subject to waste, groceries, drugs, hemp, pitch, cheese, resin, tallow, and all metals except gold and silver, &c., should be weighed; yet in the London butchers' meat-market and elsewhere, only 8 lb. of beef, mutton, &c., go to the stone.

Then we have Troy weight, which varies in a most extraordinary manner. The drachm avoirdupoise is equal to 1 dwt. $3\frac{1}{2}\frac{1}{2}$ grs. less than the drachm Troy, and the avoirdupoise ounce is nearly one-twelfth less than the Troy ounce; but the avoirdupoise pound contains 4 oz. more than the Troy pound. Then we have the grains, scruples, drachms, and the 12 oz. which make 1 lb. of the apothecaries' weight; and it is worth while to notice that although the apothecaries compound their medicines by this weight, they buy their drugs by avoirdupoise weight.

There is also Dutch Troy weight, of which 16 drops make 1 ounce, 16 ounces 1 pound of 760 grains, and 16 pounds 1 stone. Scotch Troy weight is almost as puzzling as the length of the miles in that country: in this, according to the table, $29\frac{3}{4}$ English Troy grains make 1 drop, and 16 drops, or 476 English Troy grains, 1 ounce, 20 ounces 1 pound, and 16 pounds 1 stone.

In wool weight, 7 pounds make 1 clove; but the question is, how much is the pound of wool, and how many pounds avoirdupoise are there in a clove, a stone, a tod, a wey, a sack, or a last? The same may be said of the weighing hay and straw; but 56 pounds of old hay and 60 pounds of new hay make 1 truss, 36 trusses 1 load of hay, and 36 pounds 1 truss of straw.

The wine and ale measures, as regulated according to the abovenamed Acts of Parliament, have become of general use throughout England; but even these would be much more convenient if a decimal principle had been adapted to the larger measures as well as the smaller ones. We believe that mutchkins, gills, and choppins are still well known in Scotland. The Scotch corn measure is, 4 lippies make 1 peck, 4 pecks 1 firlot, 4 firlots 1 boll, and 16 bolls 1 chalder. We will pass over the Imperial standard dry measure with only the note that it is $\frac{1}{32}$ larger than the old. The ell Flemish, the ell Scotch, the ell English, and ell French are difficulties in the cloth measure both as regards the buying and selling of goods.

The English and Scotch land and square measures are also troublesome. In the English land-measure 640 acres make 1 square mile, and 4 square roods, 10 chains, or 4,840 yards make an acre.

In the Scotch land or square measure, 1 square fall is nearly 346 English square feet, 16 square falls make one square Gunter chain, $2\frac{1}{2}$ square Gunter chains or 40 falls 1 square rood, and 4 square roods or 6,150$\frac{1}{2}$ English square yards 1 square acre. This shows a difference between the English and Scotch square acre of more than 1,300 English yards.

As regards miscellaneous matters, 5 score make 1 common hundred, 6 score 1 long hundred.

A stone, horseman's weight, is 14 pounds; a stone of butcher's meat, as we have already stated, 8 pounds; a stone of iron, 14 pounds; a stone of glass, 5 pounds; a stone of hemp, 32 pounds; a stone of cheese, 16 pounds.

Clear and simple certainly!

A CLERKENWELL RELIC.

NOT long since, in anticipation of the removal of this curious old mark; and fearing that, like the inscription on the site of the Clerks' Well, it might altogether vanish from the view; we thought it worth while to make the accompanying little sketch. At that time the inscribed stone was placed over a doorway leading to a garden. This was situate in the Bagnigge-wells-road, a little to the south-west of the Clerkenwell Police Court and station. Twenty years or so ago this was a green and pleasant scene. In the garden there were several fruit-trees, and on the north side stood a picturesque gabled house, which had the appearance of being as old as Queen Elizabeth's days: the date on the stone does not, however, agree with that.

The front was covered with a luxuriant growth of vines. At the back of the houses, but evidently of more recent date, stood one of the small old-fashioned breweries. There is a tradition that the quaint old house was occupied as an occasional summer residence by Nell Gwynne; and a pleasant

spot it must have been in Charles II.'s reign' standing amid the fields. We are not able to find anything beyond the tradition to associate this spot with the frail but kindly-hearted Nelly.

Of late years, the house, garden, and gateway began to show evident signs of neglect: the trees faded, the house became ruinous, and the doorway and even the inscription were frequently plastered over by the bill-stickers. At length we missed the buildings, and noticed that the inscription was in a dangerous condition. On again passing this way, we found that new houses were in course of erection on this site and the ground adjoining, and were well pleased that, although it had been necessary to remove the doorway and the inscription, care had been taken to recut the lettering on the stone, and to fix it in a prominent part of the front of the new premises. The preservation of old landmarks is worthy of praise, and it would be well if the good example were more extensively imitated.

The Pindar of Wakefield, as we have before mentioned, is still standing in the Gray's-inn-road. It has formerly been a large and ancient hostelry, situate in a country roadway, for the reception and entertainment of waggoners and other travellers on their way to London. Until recently, this place showed marks of antiquity, but these have been disguised by modern adornments. In former days the "Pinder a Wakefilde" and "Bagnigge House" were probably next-door neighbours, although now they are hidden from each other's view by a number of intervening streets and houses.

The discovery of mineral springs which made Bagnigge Wells a place of public resort took place in 1767.

THE ROUND TOWERS OF IRELAND.

A PAPER submitted by Mr. Hodder Westropp to the Kilkenny Archæological Society, seems to deserve even a wider circulation than is given to it by the Transactions of that very active body. We therefore print it:—

Mr. Fergusson, in his "Handbook of Architecture," remarks that Dr. Petrie's argument with regard to the round towers only removes the difficulty one step further back, as he does not attempt to show whence the Irish obtained this very remarkable form of tower; and adds, that any one who has seen the towers must feel that there is still room for any amount of speculation regarding such peculiar monuments. In reading De Caumont's "Cours d'Antiquities Monumentales," vol. vi., I have been struck with a remarkable analogy between the Irish round tower and what is named in De Caumont a "*fanal de cimitiere*," a "beacon of a cemetery," and also "lantern of the dead," which has led me to add another speculation to the already long list, and to infer that the Irish round towers derive their origin from France, and that they were erected in cemeteries as memorials of the dead, and were used as beacons to guide funeral processions to the churchyards; the light in the tower serving also as a signal to recall to the passers-by the presence of the departed, and calling on them for their prayers. The following is De Caumont's description of the fanaux:—"*Fanaux de cimitiere* are hollow towers, round or square, having at their summit several openings, in which were placed, in the Middle Ages (twelfth and thirteenth centuries), lighted lamps, in the centre of large cemeteries." The purpose of the lamp was to light, during the night, funeral processions which came from afar, and which could not always reach the burial-ground before the close of day. The beacon—lighted, if not always, at least on certain occasions, on the summit of the towers—was a sort of homage offered to the memory of the dead; a signal, recalling to the passers-by the presence of the departed, and calling on them for their prayers. M. Villegille has found in Pierre de Cluni, who died in 1156, a passage which confirms my opinion. These are the words in which he expresses himself with regard to the small tower of the beacon of the monastery of Cherlieu:—"Obtinet medium cimiterii locum structura quadam lapidea, habens in summitate sui quantitatem unius lampadis capacem, quæ ob reverentiam fidelium ibi quiescentium, totis noctibus fulgure suo locum illum sacratum illustrat." M. Lecointre Dupont remarks that these towers or beacons are found particularly in cemeteries which were by the side of high-roads, or which were in greatly frequented places. The motive for erecting these beacons was, he says, to save the living from the fear of ghosts and spirits of darkness, with which the imagination of our ancestors peopled the cemeteries during the night-time; to protect them from that "*timore nocturno*," from that pestilence "*perambulante in tenebris*" of which the Psalmist speaks; lastly, to incite the living to pray for the dead. As to the origin of these sepulchral towers, and chapels surmounted by towers (these I shall mention further on), nothing certain is known. Le Cointre thinks that they are of very ancient origin, and can be traced perhaps to the early periods of Christianity. Without disputing this opinion, which would require to be confirmed by authorities which I am not in a position to produce, I think that it was about the twelfth century, consequently about the time of the crusades, that the greater number of these structures were built; for, among those which remain, I know of none to which an earlier date can be assigned than that of the end of the eleventh century, and many are of the thirteenth century. Some of these which were rebuilt in the fourteenth and fifteenth centuries took the form of a high tower: such is, at Bordeaux, the tower of Peyberland, not far from the cathedral. This very high tower was commenced in 1481, and finished in 1492; but it has succeeded or was built on a sepulchral chapel; for it is known that in 1397 the base on which it was built was used as a sepulchral vault, and that over the sepulchral vault was a chapel in which canons celebrated mass. The belfry of St. Michael, of the same town, which has a sepulchral vault at its base, and which is of the fifteenth century (1480), has been perhaps also built over some sepulchral vault: it is detached from the church, and is in the midst of a plot of ground which formed the ancient cemetery. De Caumont then describes one of the towers at Antigny, near St. Savin, department of Vienne:—"It is in the middle of a square before the parish church, which evidently formed part of the ancient cemetery,

for it is almost completely paved with tombstones. Four square windows, turned towards the east, west, north, and south, open, under its roof, at the summit of the tower: it was there the light was placed: the door was at some distance from the ground." He then mentions others:—"The fanal of Fenioux is in the cemetery of the village, at a hundred paces from the church, opposite the south door. The fanal of Estrées occupies nearly the centre of a large plot of ground, to the south of which is the ancient road from Buzancais to Palluau, and to the north of which are the remains of the parish church of Estrées, a building of the eleventh century, the choir of which is still remaining. This plot of ground was formerly the burial-ground of the parish. This tower is built on an octagonal basement: its height is 8 metres 30 c. The fanal of Cirou is 150 metres from the church of the village, and, like that of Estrées, is in the centre of a vast cemetery. The fanal of Terigny l'Eveque was also in a cemetery, about 300 paces from the church, near which passed the ancient road, which, according to M. Damazy, was the ancient way which led from Mans to the Roman camp at Songé. It is terminated by a conical roof: its four windows are towards the four cardinal points: its height is 11 metres 70 cent." He adds:—"I could also mention several towers pointed out by different authors, which ought to be assigned to this class of building which I have pointed out."

This description, it must be allowed, bears a very striking resemblance to everything that is characteristic of the round towers, and would, I think, lead to the conviction that there must be a connecting link between the fanaux and the round towers in their almost identity of purpose. They were both used for sepulchral purposes: they were erected as memorials of the dead in cemeteries: they were placed in churchyards unsymmetrically, at some little distance from the churches: they were built in much-frequented places, such as Clonmacnoise, and Glendalough: their four windows at the summit face the four cardinal points: they are also of the same period, the eleventh and twelfth centuries, and never later than the thirteenth: finally, there is a tradition that they were used as beacons. I cannot but think that there is a similarity in principle as well as in form; for we find in the dark ages the same customs were practised in different countries; for the early Christians, particularly those who were converted from Paganism, frequently adopted and introduced, as has been the case in Italy, Pagan customs and practices into the Christian religion; and it would be but natural to suppose that the custom of lighting a lamp in a tower in honour of the dead (for this was a Pagan custom) was imported into Ireland from France; and, as Dr. Petrie argues with regard to the use of lime cement in religious edifices, a knowledge of this custom may have been imparted by the crowds of foreign ecclesiastics who flocked to Ireland as a place of refuge in the fifth and sixth centuries. We know that St. Patrick was a Frenchman, and was educated in France: a great number of St. Patrick's disciples were also foreigners. St. Declan, who it is said built the tower at Ardmore, travelled to Italy. St. Columbanus also travelled in France. Vergilius, in the eighth century, was born in Ireland; and, like most of his countrymen at that period who were distinguished for learning, left his own country and passed into France. St. Malachy consecrated several cemeteries, and rebuilt several structures, "post ejus reditum e locis transmarinis." In fine, there was in the early periods a constant intercommunication between Ireland and France, particularly with regard to religious dogmas and practices.

That the towers were erected in Irish cemeteries too as memorials of the dead, we have a kind of evidence from an apocryphal document of the fourteenth century. In the registry of Clonmacnoise, translated for Sir James Ware, we find O'Rourke "hath for a *monument* built a small castle or steeple, commonly called in Irish Claighthough, as *a memorial of his own part of that cemetarie*:" its being called here a steeple is, of course, in conformity with the common opinion. A tower as a belfry would be very little to the purpose, but a tower as a monument and memorial in honour of the dead would be in its proper place in a cemetery. It is not surprising to find two round towers and several sepulchral chapels in that cemetery, for Clonmacnoise was celebrated as being the burial-ground of several Irish chiefs. Dr. Petrie also admits that we will find it difficult to resist the conclusion that the towers would be used at night as beacons to attract and guide the benighted traveller or pious pilgrim to the house of hospitality or prayer. *Their fitness for such a purpose must be at once obvious.* He then quotes the opinion of Dr. Lingard to the same purpose, that they were used as "beacons to direct the traveller towards the church or monastery." Lights were kept burning in them during the night; at least such was the fact with respect to the new tower at Winchester, which, we learn from Wolstan, consisted of five stories, in each of which were four windows, looking towards the four cardinal points, that were illuminated every night. Dr. Hibbert Ware also considers this the only rational theory on the subject. Dr. Petrie adduces a further evidence in the description of a pharos, or beacon tower, of the Irish monastery of St. Columbanus, at Luxovium, now Luxeuil, in Burgundy, mentioned in Mabillon's "Iter Germanicum":—"Cernitur prope majorem ecclesiæ portam pharus, quam lucernam vocant, cujus omnium consimilem vidi aliquando apud carnutas. Ei usui fuisse videtur, in gratiam eorum, qui noctu ecclesiam frequentabatur." Mr. Fergusson, when mentioning, in his "Handbook of Architecture," the round towers which are described in the plan of the monastery of St. Gall, remarks the similarity of their position and form to that of the Irish round towers, which he suggests was in compliment to the Irish saint to whom the monastery owed its origin. He adds, no mention is made of bells. I can never accede to the theory, that the towers were built for belfries: in the first place, on account of their unsymmetrical position with regard to the churches they are near: secondly, at Brechin, in Scotland, there is a round tower near the church, and also a belfry in its usual position near the church-door. At Swords also there is a round tower and a belfry; and at Lusk there is a round tower, with a steeple close to it. If the round tower was built for a belfry, what would be the purpose of building a belfry close to the tower at a later period? I must say that I cannot but agree with Dr. O'Connor in thinking that the cloictheaghs, or belfries, mentioned in the Irish annals, quoted by Dr. Petrie, could not be the round towers, which were built of stone. The cloictheaghs, from their being so frequently burned, must have been of wood, like the oratories. Dr. Petrie admits that the custom of building oratories of wood was continued in Ireland even to the twelfth century; "but," he adds, "the strongest evidences in favour of this conclusion, that the *duirtheachs* were usually of wood, are those supplied by the Irish annals, which so frequently record the burning of this class of buildings by the Northmen, while the daimhliags (stone buildings) escaped the flames." If we apply similar reasoning to the frequent burning of the cloictheaghs, we must be led to the conclusion that they also must have been of wood.

Sepulchral Chapels.—De Caumont describes these chapels in the following words:—"Sometimes the *fanaux* have been replaced by sepulchral chapels, surmounted by a hollow tower and a beacon. Sepulchral chapels were evidently for the same purpose as the towers, for they too had beacons at their summit: they could be also used for the purpose of exposing the bodies of the deceased before burial; to celebrate mass; and for other purposes, the memory of which has passed away. I know but one in a state of preservation, that of the ancient cemetery of the nuns of Fontevrault. It is square. From the summit of the stone roof of the building arises a hollow tower of four or five metres high, bearing a lantern at its summit: each face of the lantern is pierced with an opening: a conical roof covers the whole: in the interior the chapel is vaulted. The date is 1223." St. Kevin's Kitchen would seem to answer the description; and thus, if the analogy which I have suggested between the two be correct, St. Kevin's Kitchen would be a stone-roofed sepulchral chapel, surmounted by a tower, which was used as a beacon for the same purpose as the *fanal de cimitiere*, or beacon of the dead; and, further, I should be inclined to consider the several churches built by Irish kings and petty princes at Clonmacnoise as sepulchral chapels.

Crosses of Cemeteries.—In De Caumont's work I remark a further analogy to Irish antiquities in his description of crosses of cemeteries, which, I think, is an additional proof that there was some connecting link between France and Ireland with regard to these towers and crosses. His words are:—"Crosses of Cemeteries.—Crosses erected in the centre of churchyards are also objects deserving of study, when they are ancient; for I am persuaded that in the Middle Ages they have, in many burial-grounds, taken the place of the towers of which I have spoken: at the present day they have taken their place in many sites. The most ancient I know of are of the twelfth, or about the end of the eleventh century. They are the most frequently simple crosses, inclosed in a circle, and raised on a square or cylindrical pedestal. In Brittany crosses have been erected on which are sculptured rather complicated groups of figures, and of a workmanship the more remarkable as they are in granite." Crosses like the first-mentioned are found in several old churchyards in Ireland. The cross over the door of the tower of Antrim is of this description. Crosses like those in Brittany are to be met with at Monasterboice, Clonmacnoise, &c.

We cannot but be led to the conviction that there must have been some connecting link between France and Ireland with regard to these towers, oratories, and crosses; for how otherwise are we to account for this singular coincidence, that in ancient Irish burial-grounds we frequently find a group composed of a round tower, an oratory, and a cross; and that in ancient French cemeteries we find an analogous and corresponding group, composed of a fanal or tower, a sepulchral chapel, and a cross? Some may suppose that the idea of these towers may have been received from Ireland by France; but I think this suggestion could not be admissible, as it is more in uniformity with the course of events that the tide of knowledge should flow from the south towards Ireland, than that the stream should run backwards. It is a singular fact that Dr. Petrie designed a round tower, an oratory, and a cross for the tomb of O'Connell in the Glasnevin cemetery. A round tower as a belfry would be very little to the purpose; but I think the group, considered as a tower or beacon of the dead, a sepulchral chapel, and a cross of a cemetery, would be in its proper place.

THE NEW LIGHT FOR DWELLINGS.

M. MONGRUEL'S ingenious invention is now, it would appear, in the hands of a company. It has of late been exhibited in the City; and we have had an opportunity of examining the process. M. Mongruel's hydrocarbonater forms the chief specialty: it consists of an air-tight vessel, in the upper part of which the hydrocarbonating liquid is contained, apart and secured against direct communication with the lower part of the "generator," as it is called: into this lower part, however, a tube opens, which conducts the liquid in very small quantity from the reservoir above to the floor below, on which it forms a thin film, which is absorbed by wicks, through which common air (or ordinary gas) is driven before it escapes at the burner. The result is that the air or gas is charged with the vapour of the liquid, and burns with a very brilliant light, which is certainly far superior to most of the gas-light one usually meets with. When common air is used, of course it must be supplied, as coal gas also is, under pressure, and hence an aërometer is required; but this may be a very cheap and simple affair for a private dwelling, we should conceive. As for the hydrocarbonization of gas, considering how brilliantly the vapour burns with mere atmospheric air, we cannot see any advantage in using gas at all, which would only increase the cost without any equivalent advantage; for it must be noted that gas thus hydrocarbonated gives no superior light to common air similarly hydrocarbonated; probably from the gas not taking up so much of the vapour as mere air does. As to the safety of such a light, there can be little doubt, we should think, that it must at least be safer than gas, even if the liquid be naphtha, which there seems to be some reason to think may be the case, although a certain reserve is observed as to this; but M. Mongruel talks of it as petroleum as well as naphtha, although these are *not* one and the same thing; petroleum, in fact, being a name recently applied to mineral oils of the nature of paraffine. That naphtha is explosive there can be no question; and the risk attendant on the filling of the "generator" must be considered, as well as the question whether atmospheric air charged with naphtha be or be not explodible in pipes. We should not like to decide from mere theory either *pro* or *con.*: the fact ought to be tested by experiment. We may here add that we observe from the Journal of the Board of Arts for Upper Canada that the subject of petroleum gas is exciting some interest in America. Petroleum gas, however, is a different thing from M. Mongruel's light, even though petroleum be used for that light. In the Canadian process the liquid petroleum is converted into gas by heat, in the usual gas retorts, just as coal is; and is then supplied to towns as is usual with coal gas. Petroleum is said to be a cheaper material for this purpose than even coal, as it produces a much more brilliant

gas-light. As for M. Mongruel's invention, as we have before said, it is just an ingenious and elegant way of burning paraffine, or it may be naphtha, or both. It is said that an immense business in this new light is already arising in this country as well as in France. The gas companies, therefore, had better look out, for serious rivalry. The new light has that purity for use in private dwellings which gas has all along so much wanted; and we have often warned the companies that if they did not find out and put in practice some certain and efficient way of perfectly purifying their gas, the great and profitable field of private dwellings, so temptingly open to them, would be occupied by some rival light more suitable to such uses than gas has been. That gas has been purer of late years than heretofore must be admitted; but neither its purity nor its brilliancy is even yet all that can be desired; nor is gas comparable to M. Mongruel's new light in either of these respects.

ENGINEERING IN BELGIUM.

THE Belgian Railway Conference has offered premiums for the best essays on the subject of their meetings, and has proposed them for public competition under the following condition:—

1. What modifications ought to be introduced into our laws in order to enable the administration, which controls the transport of passengers and goods, to act in accordance with modern improvements, and especially to regulate on equitable terms the reciprocal obligations to be observed by the expediter and the carrier on railways, so that the interests of both parties may be preserved?

2. What influence, in Belgium, do the ascending and descending gradients exert on the working expenses of railways?

3. How, in Belgium, is the cost of carriage of merchandise by railways affected by—

a. The increase of distance travelled.

b. The increase of quantity of goods transported;

And, consequently, what is the most suitable scale of charges in the twofold point of view of the interests of the public and of the companies.

The memoirs are to be written in French, Flemish, English, or German, and addressed to the secretary of the Conference of the Belgian Railways before the 1st of May, 1863. The conference will name from among its members commissioners appointed to report upon the memoirs presented.

The Conference requires the strictest accuracy in the quotations, and requests to this effect the authors to indicate the editions and pages of the books they may quote. Manuscript drawings only will be admitted.

The authors shall not affix their names to their works, but only a device, with a corresponding mark on the outside of an envelope, containing the name and address. Treatises delivered by hand [personally?], or those in which the authors make themselves known in any manner, will be excluded. All essays sent in to become the property of the Conference: copies, however, may be obtained at the expense of the authors by applying to the secretary.

The conference places at the disposition of the competitors all the documents in its possession, and offers to render every possible assistance in giving information which may be requested. To this effect communications must be addressed to M. Wergifosse, secretary of the conference, Galerie du Roi, 15, à Bruxelles.

In no country, perhaps, is higher honour paid to merit than in Belgium. During a concert given at Brussels, on the evening of the 10th inst., in the Salons de la Grande Harmonie, by the Association of Musical Artistes, and in the interval between two pieces, M. Rauwet, president of the society, mounted the estrade, and, after having enumerated the artistic titles of M. Haussens, *chef de l'orchestre* of the Theatre Royal of the Monnaie, read the royal warrant naming him officer of the Order of Leopold. M. Stevens, secretary general of the Minister of the Interior, then remitted to M. Haussens the insignia of his new grade amid the sympathizing demonstrations of the audience, and cries of *Vive le Roi!*

During the present session of the Belgian Chambers, a new project of public works to be executed will be presented to the legislature, containing, among other undertakings, several railways.

The section of public works of the municipal council of Brussels has been lately deliberating upon a new plan of a chamber of commerce presented by M. Mols-Maréchal. This plan has been in due course laid before the special commission, which is shortly to issue its report on the various projects.

The Belgian Government has approved of the new plans of the railway-station at Brussels, and the works are to be commenced forthwith.

PRUSSIA.

FOR some time past the Prussian Government has been occupied with new surveys for the project of a canal which will unite the Rhine, the Weser, and the Elbe, the three most important rivers of its western territory. As recent investigations have demonstrated that these works do not present any formidable obstacles, it is likely that the Government will not delay much longer in putting the scheme into execution.

The model in plaster of the equestrian statue of King Frederick William IV., which is to decorate the bridge over the Rhine at Cologne, is exhibited in the ateliers of Professor Blaser at Berlin. It is of larger size than any of the equestrian statues which exist, even surpassing in magnitude the magnificent monument of Frederick the Great. The statue will be executed in bronze, and will have as pendant the statue of the reigning monarch, at which Professor Drake has been laboriously engaged for some time.

THE CATHEDRAL OF AMIENS.

THE statement transferred to our number of last week from a London newspaper, as to discovery of a dangerous condition of the vaulting of this cathedral, appears to be erroneous. The statement, first made by the *Journal d'Amiens*, originated, according to the *Mémorial d'Amiens*, in the fact of certain work of restoration that had become necessary in one of the clerestory windows, owing to the effects of rusting of iron, which metal had been used in cramps, on the occasion of some former works of reparation, twenty years ago. We can ourselves venture to assert that there are few buildings so well looked after structurally as the Cathedral of Amiens.

The diocesan architect, M. Massenot, is always on the spot. M. Viollet-le-Duc is architect in chief. It may be well to mention that at the level of one of the upper galleries of this cathedral, but wholly inside the structure, a strong iron tie runs entirely round the building. This, we believe, was placed during the period of the First Empire. In its position it is not acted upon by the weather. Whether there has ever been any manifestation of effects from expansion and contraction we are not aware; but if so, they do not seem to have been considered important, and the tie in question was arranged not altogether without dexterity.

GRANITE MONUMENTS IN PREPARATION.

IN the Penryn granite quarries, the establishment of Messrs. W. & J. Freeman, monuments are now in the course of preparation for the late Duke of Wellington and the late Lord Herbert. The first is to be erected, by order of the present Duke of Wellington, at Strathfieldsaye. It is to be formed of a base, with a flight of three steps, covering a space of 30 feet. Upon the highest of these steps will be a plinth for the monument 12 feet square and 6 feet high. Above this comes a moulded plinth. The die is to be 9 feet 6 inches high, and 7 feet square, and will weigh upwards of forty-five tons of itself. The trouble involved in the quarrying, dressing, polishing, and carriage of such an immense piece of granite cannot be well estimated by those unacquainted with the working—the greatest of all being to preserve it from injury. The cornice moulding will be 10 feet 8 inches square. On this will be placed the monolith, respecting which we hear the following particulars. It is 30 feet in length, and, like the other parts of the monument, is of Penryn granite, which has a fine grain, and is susceptible of a high polish. This column was obtained from a quarry at Spargodown, distant from the yard about four miles. As the roads from this and the other quarries are of the roughest character, the reader can easily judge that to convey a mass like this, weighing, as it does, twenty tons, required both skill and perseverance by master and men. It is said to be the finest piece of stone ever dressed in the county of Cornwall, and, indeed, in the kingdom. The operation of dressing is very important, though the tools used are of the most primitive fashion, viz., a kind of blunt axe, chisel, and hammer.

The Wellington monolith will occupy between two and three months in finishing. When erected it will be surmounted by a bronze capital in the Corinthian order; and on this will rest the statue of the Iron Duke, the execution of which is intrusted to Baron Marochetti. The time for the completion of the monument is in 1864.

The work preparing for the tomb of Lord Herbert of Lea is simply designed for a square shaft, on which will be placed a statue, also by Baron Marochetti. The work intrusted to the Messrs. Freeman will be composed of highly-polished Penryn granite, and will be ready in two or three months. A number of men are now employed finishing it.

COMPETITIONS.

Wesleyan Chapel, Plymouth.—We are glad to find that the advertisement of the committee for managing this matter has excited great indignation. One correspondent begs us to print the names of all architects who submit designs in answer to it, and a second desiring that "an example should be made of this proposal, emanating as it does from a professedly Christian body," wishes us to obtain and publish the names of those architects who have written for particulars, and decline to compete. Neither course, however, would be of any value.

Another correspondent, in the course of a communication on the subject, says,—"Why, sir, in those favourite haunts of gambling, the '*Kursaals*' of Baden and Homburg, there is always some tolerably fair proportion between the stake and the prize. For instance, a man stakes 1*l*. with the chances 3 to 1 against him, and if successful wins nearly three times his stake. This principle is to be noticed more or less in other varieties of gaming, and is an illustration of the adage 'honour among thieves.' What would the gaming fraternity think of asking men to stake 3*l*. with the chances 20 to 1 against them, for a prize of 1*l*.? Unblushing as that class may be, I verily believe they would be ashamed to offer such terms. And this is the proposal now being made by some of the members of a community who think themselves more than ordinarily enlightened on moral and religious questions. The venerable John Wesley would not tolerate pawnbroking among his societies, as taking an unfair advantage of men's necessities. The Plymouth Methodists, however, do not seem gifted with any such nice perception. The most charitable supposition to account for the offer of such disgraceful terms is that of ignorance on their part. If so I trust this letter may tend to dissipate some of that, though the precision with which the conditions are drawn out seems hardly compatible with the supposition. Where is the use, I might further ask, of requiring such heaps of drawings for the purpose of selecting what would be amply expressed by a few? I trust the architects of the south-west of England will know how to mark their sense of what is due to them by their conduct in this matter."

Church of Saint John and Saint George, Exeter.—A correspondent writes,—"Your notice of the competition for this church does not tell all the facts as to the decision. It ought to be understood that two or three of the committee, the most competent to decide on the merits of the five plans, judged that the designs should be submitted for the opinion of an experienced architect. The rest of the committee refused this, and the competent men had to withdraw, as they could not approve the design of 'Excelsior,' which was then only adopted. A few days since, at a vestry meeting, the ratepayers, in a majority of twenty-seven votes over fifteen, rejected the plan chosen by the 'Building Committee.' You have my name."

Kenilworth Parish Church.—The plans of Mr. William Smith, New Adelphi Chambers, London, for the restoration of the church, have been selected by the committee. There were seven other competitors.

North Staffordshire Infirmary. — One correspondent, who represents several others, writes,—"Allow me to call your attention to the proceedings of the governors of the North Staffordshire Infirmary. After purchasing land on which to erect the new building, and advertising for plans, and receiving between forty and fifty sets from competing architects, the whole of the actions of the committee for the last eighteen months have been entirely annulled; and while sympathy is claimed for 'poor' Mr. Bishop, who has pocketed 200*l*. on account of the land, nothing is said in reference to the superior claims of the competitors, except the jeering remark that Etruria Station was blockaded with plans! Being myself one of those who with great simplicity competed in anticipation of the erection of the building, I would wish it to be understood that though the committee award the 100*l*. premium, it will not pay more than wages for the work on one set of the plans, leaving out of the question the disbursement on account of materials and carriage, which must amount on the whole to 500*l*. at the least computation. To annul the actions of the committee is to inflict a great injustice upon the competitors.

A COMPETITOR."

LOCK AND SAFE LITERATURE.

RIVAL lock and safe manufacturers appear to be stimulating one another to literary exertions on behalf of their respective inventions. Messrs. Hobbs & Co. have a really interesting little treatise "On the Application of Steam Machinery to the Manufacture of Locks and Keys," in which they give an account of the extensive adoption of machinery at their manufactory in New North-road, with explanatory details of the principal operations, and their influence on the economy of production. Of course, many of our readers have not forgotten Mr. Hobbs, the clever American lock-picker, who has certainly done something to restore the public confidence in locks, as well as much to destroy that confidence. The treatise is illustrated by engravings. We may next notice a plaintive growl about "The Partiality of the London Press," by "A Young Man from the Country," who declares that "nothing can be farther from the truth" than that he is "a disappointed man;" but who bewails the fact that he is an orphan, or at least "lacks the prestige of a father's name," as well as the possession of all the little capital he would wish to have; but hopes "that the day may be far distant when there will be but one lock-maker, one magazine like the *Cornhill*, one illustrated weekly paper, one builders' journal," &c. This "treatise" is mostly filled with a tirade against Mr. Chubb and the *Cornhill Magazine*, whose "partiality" for Mr. Chubb's locks and safes appears to have excited the ire of the poor young country orphan, who would have much preferred that the *Cornhill* had extolled the locks and safes of Mr. George Price, of Wolverhampton; a "partiality" for whom, we dare say, would not have been so objectionable to the author. In allusion to Mr. Price, we may here notice a couple of sheets of engravings of "ornamental key-bows, designed by J. D. Wyatt, architect," for him: some of these are very tasteful, and must require sterling workmanship to do them justice.

Amongst lock and safe literature we may also comprise various circular publications by Messrs. Thomas Milner & Sons, of Liverpool, in advocacy of their well known "hold-fast and fire-resisting safes," respecting which these circulars contain a far greater mass of certificates from all quarters than most people are likely to read.

THE NATIONAL ALBERT MEMORIAL DESIGNS.

ON the 17th inst. the seven architects who have prepared designs for the proposed National Memorial of Albert the Good received instructions to forward their drawings to Windsor Castle, and were invited by Sir C. Eastlake to say exactly how they wished them arranged. St. George's Hall is appropriated to them. Two screens, placed obliquely with reference to each window in the south side of the hall, so as to receive as much light as possible,—approaching therefore towards each other at the end farthest from the window, so as to form a separate enclosure,—contain the drawings of each architect. Every screen is 21 feet long and 8 feet 3 inches in height, admitting of the drawings, where desired, being placed in a single row and opposite the eye; but the adoption of this or any other mode has rested, as we have said, with the competitors themselves. The conditions of light being exactly the same in every case, the order of the screens as assigned to each architect was decided by lot. We have no intention of prematurely communicating any information of the designs even to the extent that may be in our power, beyond the remark that the majority of the architects have taken the view we early put forth, and propose, in varied shape, a shrine or memorial temple, containing a statue of the Prince, and to the adornment of which various arts are made to contribute.

We cannot avoid expressing a hope, with no desire but that of conducing to the most satisfactory accomplishment of the universal wish for a memorial of suitable magnificence and beauty, that the committee, aided by proper advice, will at once critically examine and report on the designs, so that her Majesty may be put in possession of data useful in forming a judgment.

CHRIST CHURCH LLANDUDNO

CHRIST CHURCH, LLANDUDNO.

THIS church was erected in the year 1858, through the instrumentality of John Crossley, Esq., of Halifax, and other friends. Since that time the town has so rapidly increased that the building is found to be much too small for the large number of visitors annually gathered together in this favourite watering-place.

The church, as it now stands, is a simple parallelogram, 70 feet by 33 feet 6 inches; and it is proposed to add transepts on each side, with a circular apsidal recess for vestries and organ, besides a tower and spire at the angle of the principal front, containing a staircase to the gallery. By this means accommodation will be provided for 562 adult sitters on the ground-floor, and 158 in an end gallery opposite the pulpit. Additional gallery accommodation may be obtained at a future time, when still further enlargements may be required.

Mr. Joseph James, of London, is the architect employed.

DUBLIN EXHIBITION PALACE AND WINTER GARDEN.

THE committee, as our readers are aware, selected from the designs for this work submitted in competition, one by Mr. Alfred G. Jones, of Dublin. We have engraved a view of it.

The principal front is intended to face Earlsfort-terrace, and contains three separate entrances, the one in the centre leading to the grand entrance hall, which is to be lighted by a dome, forming an important feature. From this will be corridors communicating with the concert halls, winter garden, and exhibition buildings. There are also two special entrances—that on the north side leading to the Exhibition department, and that on the south to the winter garden. A colonnade connects these three principal entrances, and affords shelter and accommodation for a large number of carriages to set down and take up their occupants without the risk of exposure to the weather.

On the left hand of the central entrance is placed the concert-hall, capable of accommodating 3,000 persons, with an orchestra and retiring and dressing rooms. There are separate cloak-rooms provided for the convenience of the audience both in the body of the hall and in the galleries. On the right of the entrance-hall is placed the small concert-hall, capable of containing 1,500 persons. It is to be provided with similar arrangements, and also a lecture-room and practising-room.

The Exhibition building is placed on the north side, and extends from front to rear, provided with picture galleries.

The Winter Garden will be formed at the south and west sides, and will be of considerable extent, with continuous galleries. This building is to be constructed of glass and iron, having two principal fronts. The west front of the Winter Garden will run the full extent of the buildings, and unite with the Exhibition department. The building will also contain a private entrance for the use of the Lord Lieutenant and his suite, as well as dining-rooms, board-room, secretary's office, manager's residence, &c., with a basement story. The building, except on the north side, will be surrounded by an ornamental garden and grounds, the laying out of which will be under the direction of Mr. Nevin, landscape gardener, of Drumcondra. The cost of the building is estimated at 40,000*l*. The whole site covers about 15 acres of ground.

The architect, Mr. Jones, has engaged the co-operation of Messrs. Ordish & Le Feuvre, of London, to assist him with the details of the ironwork.

The illustration represents the design as selected by the committee; but certain modifications will be made, chiefly with a view to reduce the cost.

The dimensions of the principal compartments in the arrangement of the building will be as follow:—

	Feet.	Feet.	Feet.
Large concert hall..	130 by	65 and 50	high.
Small do. do....	90 by	52 and 50	,,
Band-practising room	65 by	38 and 22	,,
Picture gallery	110 by	22 and 25	,,
Lecture-room.....	65 by	38 and 37	,,
Board-room.....	43 by	30 and 37	,,
Dining-rooms.....	102 by	36 and 22	,,
Winter garden	375 by	80 and 60	,,
Exhibition building	255 by	120 and 60	,,

DUBLIN EXHIBITION PALACE AND WINTER GARDEN.—DESIGNED BY MR. ALFRED G. JONES; SELECTED IN COMPETITION.

INCREASE AND DECREASE IN THE POPULATION.

FROM the recently-published census returns of the Registrar-General we learn something of the increase and decline of the population of some chief English towns and registration districts between 1851 and 1861.

In all parts of the county of Durham the increase of the population during ten years has been remarkable. The population of the entire county in 1851 was 411,674; in 8161, 542,125; increase, 130,446. All the chief towns have largely grown in population. At Stockton in the ten years the increase is 20,233; Hartlepool, which not long ago was a very small fishing town, has now a population of 29,153: the increase in ten years is 13,085. Auckland, formerly a place of no importance, has a population of 50,491; the increase in ten years is 20,408. Durham city has grown in population by 14,323; Sunderland (which now has 67,704) by 20,128; South Shields, 9,059; and Gateshead, by 11,328.

Northumberland county has increased in population by 39,457 people. The chief increase has been in the towns Newcastle-on-Tyne and Tynemouth. The former has 21,812 more people than in 1851, and the latter 13,707. Morpeth has 1,876 more inhabitants, Castle Ward 1,036, and Berwick 1,414. Some other towns in this county have decreased in population. Haltwhistle, 593; Alnwick, 69; Belford, 611; Berwick, 2,231; Hexhamdale, 1,137; and Rothbury, 284.

In Cumberland the increase has been 9,784. The chief increase has been at Whitehaven, which has gained since 1851, 4,336 inhabitants; Carlisle, 2,263; Cockermouth, 2,782; and Longtown, 773. In Westmoreland the increase of the population has been no more than 2,559.

The increase of population in Yorkshire has been in ten years 226,494; the West Riding, 185,866; the East Riding (with York), 22,924; North Riding, 17,992.

The population of York city has only increased 1,344. Bradford has increased 14,511; Hunslet, 12,279; Leeds, 16,223; and Dewsbury, 21,115. The other towns in the West Riding which show a remarkable increase are Barnsley, 10,817; Chapeltown, Brierlow, 25,704; and Rotherham. In the East Riding the largest increase has been at Hedcoates (7,237) and Hull (6,218). In the North Riding the largest increase is at Guisborough, which has 9,926 more inhabitants than in 1851. The chief towns of the North Riding have declined in population; but in other parts of the county, Aldbergh, Settle, Skipton, Ripon, Great Ouseburn, Bedley, Hemsworth, Easingwold, Thirsk, Northallerton, Bedale, Reeth, and Richmond, have all declined in population.

In Cheshire, since 1851, the population has increased by 49,037. All the chief towns show an increase except Macclesfield, which has declined in population to the number of 1,784 persons. The most remarkable increase is at Wirral, which has increased to the extent of 22,683 persons.

The population of Lancashire has been increased to the large number of 398,065 persons. All the chief towns show an increase except Clitheroe and Prestang, which have declined in population. The following towns have increased in population:—Liverpool, 11,506; West Derby, 72,566; Prescot, 10,053; Wigan, 17,022; Bolton, 15,557; Bury, 8,820; Chorlton, 45,738; Salford, 17,812; Manchester, 15,555; Ashton, 15,554 (it is remarkable that there is only a difference of one in the increase of these towns); Oldham, 24,488; Rochdale, 12,239; Haslingden, 19,357; Burnley, 11,727; Blackburn, 29,204; and Preston, 13,978.

Leicestershire has increased since 1851 to the extent of 7,728 persons; seven out of eleven of the chief towns of this county have declined in population. Leicester has increased by 7,548, and Loughby-de-la-Zouch, 2,585.

Rutlandshire has *declined* in population to the extent of 793 persons—Oakham, 441; Uppingham, 352. This decrease is attributed to migration to the manufacturing districts, and to the removal of persons who were, in 1851, engaged in railway works. In Lincolnshire there is the small increase of 3,901. Ten of the chief towns show a marked decrease. Stamford has declined to the extent of 1,542; Bourn, 1,069; Spalding, 341; Wainfleet, 732; Boston, 475; Grantham, 964; Folkingsby, 138; and Gainsborough, 1,285. Sleaford, Lincoln, Louth, Caistor, and Glanford Brigg have increased slightly in population. Nottinghamshire has increased by 29,410 people,—the chief increase, 17,346, being in the town of Nottingham. Worksop, Mansfield, Basford, and Retford, also show an increase. East Retford, Southwell, Newark, and Bingham, have declined. The population of Derbyshire has increased by 33,181: the chief increase is at Chesterfield, which has 15,984 more inhabitants than in 1851. Shardlow has decreased by 1,209; and this decline is accounted for by migration and the depression of some trades.

Gloucestershire has increased in population since 1851 to the extent of 24,021 people: in Bristol city the increase is 311; in Clifton, 16,737; Cheltenham, 5,608; Gloucester, 2,905; Westbury-on-Severn, 2,065. Dursley, Newent, Wheatenhurst, Stroud, Tetbury, Cirencester, Northleach, Stow-on-the-Wold, Winchcomb, and Tewkesbury, have all decreased in population. The increase of the population of Herefordshire is 7,676: all the chief towns have advanced in numbers, the town of Hereford to the extent of 4,133. Shropshire has increased in population 10,905. Shrewsbury, 2,776. Ellesmere, Whitchurch, Newport, Cleobury, and Mortimer, have declined in population.

Staffordshire, like the other great seats of manufacture, shows a large increase. In this county there were, in April, 1861, 138,996 more inhabitants than in 1851. All the chief towns, except Leek, are reported to have increased, Wolverhampton to the extent of 22,744; West Bromwich, 22,751; Dudley, 23,737; Walsall, 16,846; Burton-upon-Trent, 9,222; Stoke-upon-Trent, 13,366; and Wolstanton, 12,440. In Worcestershire, the only chief town which has decreased in population since 1851 is Kidderminster, which had at the taking of the last census 2,610 fewer people. Stourbridge had increased by 11,376; and King's Norton by 16,478. The population of this county is greater by 36,220 persons; and that of Warwickshire by 82,177. In this central county, Nuneaton, Alcester, Shipston-on-Stour, and Southam, have decreased in population; Stratford-on-Avon has increased 502; Birmingham, 38,676; Aston, 33,670; and Coventry, 4,835.

The population of Wiltshire has *declined* to the extent of 4,909 persons. This decrease is attributed to the migration of young persons to towns: in the parish of Calne, to the removal of some of the inhabitants to another neighbourhood; in the parish of Cherhill, to the removal of dilapidated houses, and to a reduction of the number of families in one house; in the parish of Bishops-Cannings, to the number of young men who have entered the army; in Urchfont, the decrease of the population is attributed to the removal of cottages; in Market-Lavington, to the removal of machinery works and of a foundry; in the parish of Bromham, to migration caused by machinery superseding hand-looms [several houses here have been pulled down]; at Bradford, the general decrease of the population is said to have been caused by the migration to large towns in consequence of the use of machinery in the various branches of the woollen cloth manufacture. The houses, when left tenantless, have been allowed to fall into decay or to fall down. In Keevil and Eddington the decrease is attributed to emigration to New South Wales, and to migration to the mining districts. Fourteen out of eighteen of the large towns have decreased in population.

Dorsetshire shows the small increase of 5,098. Nearly all the large towns have decreased in population, except Weymouth, which has increased to the extent of 5,291; Poole, 851; and Sherborne, 382. The increase of Devonshire has been 20,074; but thirteen out of twenty of the chief towns have declined. Plymouth has increased 10,378; Newton Abbot, 6,757. Cornwall has increased to the extent of 11,211 people; but several of the towns have declined in population. The chief increase has been in Liskeard and Redruth.

Somersetshire, with a population in 1861 of 463,261, shows the small increase of 979. Several of the chief towns have declined, and the largest increase is at Bedminster [3,114].

In Essex the increase of population is 35,595; but several towns have declined. Colchester has, however, increased to the extent of 4,372, and West Ham 24,924. The large increase of the Stratford sub-district is attributed to the establishment of manufactories belonging to the Eastern Counties Railway, the operations of building societies, and the erection of the Victoria Docks and iron ship-building establishments.

The population of Suffolk has declined by 747; nearly all the large towns have declined except Ipswich and Mutford.

In Norfolk the decline of population is still greater, amounting to as much as 6,250 persons. Yarmouth has increased by 3,458; Flegg, 134; Norwich, 6,244; but nineteen considerable towns in this county have decreased in population,—in King's Lynn to the extent of 3,829.

The part of Middlesex, not immediately connected with the metropolis, has increased by 36,719; the county of Hertfordshire, 3,490; Buckingham, 3,552; Oxfordshire, 986; Northamptonshire, 17,235; and Bedfordshire, 10,674. But the population of Huntingdonshire has decreased 1,182; and Cambridgeshire by the large number of 10,309 persons. The population of this county was, in 1851, 191,894; in 1861, only 181,585.

The population of that part of Surrey in the south-eastern district has increased by 70,743. The chief increase in towns has been, Farnham, 18,964; Croydon, 14,586. The part of Kent in the same district has been increased in population by 60,251 persons; Sussex, 27,232; Hampshire, 54,608; and Berkshire, 6,411. In those counties the most marked increase has been at Brighton [12,124] and Portsea Island.

THE MEMORIAL OF THE 1851 EXHIBITION, AND THE PRINCE OF WALES.

THE following letters, in continuation of correspondence already made public, will probably interest even a larger circle than the subscribers to the Memorial:—

"*To his Royal Highness the Prince of Wales, &c., &c.*

SIR,—The Memorial of the Great Exhibition of 1851 is now so far advanced that the day of its inauguration may be fixed and announced. Your Royal Highness's lamented father, the Prince Consort, had intimated his intention that this event should be marked with honour. By an act fully appreciated, not alone by the committee I have the pleasure to represent, but by the people of this country, your Royal Highness has connected yourself with the Memorial, and restored to it the twofold character it was originally intended to have. I have now to beg, Sir, that you will increase the obligation already conferred, and permit the announcement that the Memorial will be inaugurated by your Royal Highness on the 5th of June, the anniversary of the opening of the Horticultural Society's Gardens, in which it stands.

I have taken the pleasure of her Majesty the Queen upon the subject, and have received a gracious intimation that her Majesty will have no objection to such an announcement.

I have the honour to subscribe myself,
Sir,
Your Royal Highness's obedient and devoted servant,
GEORGE GODWIN.

24, Alexander-square, Brompton,
January 19th, 1863."

"Sandringham, Norfolk,
24th January, 1863.

"SIR,—I am directed by the Prince of Wales to acknowledge the receipt of your letter, requesting, in the name of the Committee for the Memorial of the Great Exhibition of 1851, that his Royal Highness would be pleased to inaugurate it on the 5th June next, and permit the announcement to be made accordingly.

It is with the greatest satisfaction that his Royal Highness accedes to the request; for in so doing he cannot but feel that he is contributing towards carrying out the wishes of a beloved and lamented parent, that the Memorial of the Exhibition of 1851 should be inaugurated with every circumstance of honour.

I have the honour to be, Sir,
Your most obedient servant,
G. Godwin, Esq." W. KNOLLYS.

BIRMINGHAM OF OLD.

ON the occasion of laying the first stone of Birmingham Exchange Buildings, on the 21st instant (briefly recorded in our last), the Rev. Dr. Miller made an address which interested those present very much. Remembering the Rev. Dr. a painsful and successful student in the Brompton Grammar School, it is always agreeable to us to note the regard in which he is held in the field of his labours. In the course of the address to which we have alluded Dr. Miller said,—"It is one of those occasions when one's mind naturally goes back to the ancient history of the town; and last evening I could not help turning to a page which, I presume, every Birmingham man has read, or ought to read,—that very graphic page in which Lord Macaulay gives us an account of Birmingham in the year 1658. I think we then had, if I may speak of 'we' in such a case, 4,000 inhabitants; and we are told by Lord Macaulay that the manufacturers of Birmingham were, even in that day, a busy and thriving race. They had though, even then, somewhat of a little taint upon them which the persons concerned in the late robbery of bank paper seem determined to perpetuate: they seemed to have a habit of handling bad money. Birmingham buttons were then scarcely known: Birmingham guns were then unknown altogether; and, strange

to say, there was not a Bible nor an almanac to be purchased at any bookseller's in the town. The literature of the town was supplied,—and the supply equalled the demand,—by old Michael Johnson, the father of the great Dr. Johnson, who used occasionally to come over from Lichfield, and bring with him all the literary food that the people of Birmingham were then able to receive. But, turning to more ancient chronicles, we find the first description recorded of the old town of Birmingham; and, looking at the old pictorial plan of Birmingham, which we have all seen, I find more houses in the plan than there should have been, if the written description be right. This description was written of the town in the time of Henry VIII. by Leland. This is it:—'The beauty of Birmingham, a good market town in the extreme parts of Warwickshire, is one street going up alonge almost from the left ripe (or bank) of the brooke (which means that ancient and remarkable river called the Rea) up a meane hill by the length of a quarter of a mile . . . There be many smithes in the town, that use to make knives, and all manner of cutting tools, and many lorimers that make bittes (who, I take it, were the seeds of future harness ironmongers), and a great many naylors; so that a great part of the town was maintained by smithes, who have their iron and sea-cole out of Staffordshire.' A half century later, Camden says, it is 'swarming with inhabitants, and echoing with the noise of anvils (for here are great numbers of smithes'). I turn from old Camden with that covetousness which is inherent in parsons to see what was the state of the fees. I state what I am going to state for the benefit of the Burial Board committee. I congratulate myself that I am rector of St. Martin's now instead of having been then, for I find that in the sixteenth century there were in six months sixteen deaths, six marriages, and twenty-four births. That is from the register of the parish church. In the seventeenth century there were in one year thirty-seven burials, and in another year sixty-four. The marriages in one year were ten, and in another year seventeen,—a number which would now be considered very small for publication in one Sunday at St. Martin's. The baptisms in the year were 102. We should not then have wanted a hospital for sick children. It is very curious to compare these old accounts of the town with the state of the town now, when you want such an Exchange as this; and I hope you will forgive the little gossip in which I have indulged. I will only say it is not simply in the building of an Exchange, or in any such achievement, that we must look for the true prosperity of the town. Nothing rejoices my heart so much as to see the great progress which education is making amongst all classes, and to see especially that we are enabled to maintain that independence and that openness which Birmingham men pride themselves upon, with an increased measure of consideration and kindness towards one another, which enables us to work together, in matters where unity is possible, consistently with conscience. I see all classes are being welded together, and I confess that this is what rejoices me."

CHARING CROSS STATION.

Now that the site is cleared, the extent of the intended railway station at Charing-cross may be judged of. The bridge is approaching completion.

The total length of the bridge from end to end, is called 1,360 feet: its width between the main girders is 50 feet; and outside this there are two 7-feet footways for passengers; making the total width 64 feet, with a clear headway above high water-mark of 25 feet.

The arches under the station are being formed. The front of the station will be set back a considerable distance from the Strand to enable carriages to drive up to the doors of the booking-offices. The station at Charing-cross will occupy rather more than the whole of the area of the late Hungerford-market. From the termination of the bridge to the frontage of the station will be about 450 feet in length, and the width will be 170 feet. Nearly 400 feet of the distance will be covered by an arched roof of glass and iron. The frontage is 230 feet long, and extends from the corner of Villiers-street to Brewer's-lane, taking down the whole of Charles-court, which lies between them. In connexion with the station there will be erected a large hotel, designed by Mr. E. M. Barry, and containing 200 rooms. It will have a frontage looking on to the Strand, and another of 190 feet in Villiers-street.

The principal entrance will be on the Villiers-street side of the station; and the main portions of the hotel will consist of three stories, an entresol, and a mezzanine over the booking-offices. The view from the back will overlook the station. The style of the hotel will be Italian. The Charing-cross Railway Company will receive from this hotel company a large sum, either by way of purchase of the site or annual rental; and this, it is expected, added to the rent of the arches under the station, will pay a dividend on the cost of the land and property of the Hungerford-market. Among other conveniences which will be provided for visitors to the hotel will be an ascending-room, in which they can be raised or lowered to or from any of the floors of the hotel. The contract for the building of the hotel has been let to Messrs. Lucas. Mr. Wythes is the contractor for the station, and also for putting in the foundations for the hotel.

Trains will run all day, at intervals of five minutes, between the Charing-cross station and one in Cannon-street, behind the Mansion House. The main Southern Continental lines will come on to the Charing-cross station.

CHURCH-BUILDING NEWS.

Langham.—The parish church of Langham, near Colchester, is about to be restored and re-seated, and provided with new altar rail, pulpit, and prayer-desk. The carved bench-ends of the fifteenth century at present scattered throughout the nave will be refixed in the chancel. Mr. H. W. Hayward, of Colchester, is the architect: Mr. Bremer, of Colchester, contractor for the masonry; and Mr. Hawkins, of Monks Eleigh, for the woodwork.

Worcester.—The Earl of Dudley has sent a donation of 200*l.* towards the fund for erecting the new church at Shrubhill, near the Worcester Station of the West Midland Railway. The works will shortly be commenced. Mr. W. J. Hopkins, consulting architect to the Worcester Diocesan Church-Building Society, is the architect employed.

Willenhall.—The new Baptist Chapel, which has just been erected in Upper Lichfield-street, for the accommodation of the Baptist Dissenters, who have been heretofore worshipping in Gower-street, has been formally opened. The new building will accommodate 650 persons, and will cost altogether 1,600*l.* Mr. Charles Manton, of Wolverhampton, is the architect; and Mr. D. Evans, of the same town, the builder.

Rhyl (*Flintshire*).—The Rhyl English Baptist Chapel is now drawing towards completion. The rough work is already finished. The bricklayers, plasterers, stonecutters, &c., being on the eve of leaving, Mr. Johnson, the architect, invited all the workmen connected with the building to a *soirée* on the 14th inst., in the school adjoining the chapel. Mr. James Taylor, jun., presided; and Mr. Johnson, architect, and Mr. Bennett, builder, acted as vice-presidents.

Hanbury.—The new chancel of Hanbury church has been opened by the Bishop of Lichfield. The work has been completed in about six months. The old building had fallen into such a state of dilapidation, that to repair it was found impossible. It was, therefore, determined to take it down and rebuild it entirely. Designs were supplied by Messrs. Hine & Evans, of Nottingham, architects, and the work was executed by Mr. Evans, of Ellastone. The new structure, which is built on the foundations of the old, is 40 feet long by 24 feet wide. Its chief features are the east window, with reredos, and the arch between the nave and chancel. The former is a moulded traceried window of five lights of the Early Decorated period (the style adopted for the whole of the new work). It is erected as a memorial of the Prince Consort, and is the gift (both stone-work and glass) of Mr. C. E. Boothby (church-warden) and the Hon. Mrs. C. E. Boothby, whose first husband, Mr. G. E. Anson, was private secretary and treasurer to his Royal Highness, and afterwards privy purse to the Queen. Many like memorials to the Prince have been erected during the past year, but in the present instance there were peculiar reasons for dedicating the Hanbury window to this purpose. In the church of the adjoining parish of Sudbury, where Mr. Anson's remains found a last resting-place, the Queen and the Prince placed a large new east window as a memorial of him. The glass of the Hanbury window is by Messrs. Ward & Hughes, of London, the same firm that designed and executed the Sudbury window. The whole subject of the Hanbury window is devoted to our Saviour: in the centre light the Saviour Himself is represented as "the Good Shepherd," and is placed upon a pedestal to raise him above the height of the Four Evangelists, by whom he is surrounded, and whose figures occupy the other principal lights. All the figures have a white background, diapered with the oak-leaf and acorn; and over each is a light canopy, in the form of the "bower" canopy of the German school of art. The border ornament is composed of passion flowers, the background being worked in ruby glass. In the uppermost trefoil of the tracery above is the symbol of the Holy Trinity; in the centre of the quatrefoil the figures of two angels, having a cross between them, and holding a celestial crown above them; and in the trefoil directly below that, and over the Saviour's head, is the Dove descending upon Him. In two other quatrefoils are "the Lamb of God," bearing the cross and the banner, and the emblem of the Pelican. The subjects in these three quatrefoils are intended to represent the three Christian graces—Faith, Hope, and Charity. The rest of the upper tracery is filled with the sacred symbols and monograms taken from the Greek. The drip-stone over the exterior of the window terminates on one side with the head of the Queen, carved in stone, and on the other with that of the Prince Consort. An inscription in the glass runs along the foot of the principal lights, and is in the following words:—"To the glory of God and to the memory of the good Prince Albert of Saxe Co-Coburg and Gotha, Consort of Queen Victoria, this window was erected in the year of our Lord 1862." The reredos beneath the east window is executed in alabaster from the quarry at Fauld, in the parish of Hanbury. It is of five arcaded niches, divided by circular shafts with carved capitals, supporting moulded tracery with solid spandrils left rough for carving, and surmounted by a string course, sunk to receive an inscription of encaustic tile work. The walls at the back and below the reredos are lined with alabaster. This reredos is presented by Mrs. J. R. Foote. The chancel is entered through an arch, 18 feet in span and 25 feet in height, formed of stone and alabaster, with short shafts and carved capitals resting on corbels sculptured with the figures of two angels, emblematical of Prayer and Praise. The roof is high pitched, its internal section being polygonal, with moulded ribs and carved wall plates, diagonal boarding, and with a pierced tre foil fascia, the whole being stained and varnished. On the south side are two one-light and one two light windows, with a priest's doorway; and on the north side are two one-light windows, with an organ recess intervening, the latter having a stone arch opening into the chancel. The aisles and altar space are laid throughout with Minton's tiles, those of the latter being of a lighter colour and richer design. Exteriorly the walls are executed in roughly-tooled ashlar, with plain lettered buttresses at the angles; a large quantity of the old stone being worked up in the new walls. The roof is covered with slates, and the ridge with Staffordshire tiles, plain rolled and serrated alternately.

Heywood (*Lancashire*).—A school chapel is to be built early in the spring at Heywood. The material will be brick of two colours, and the style a simple form of Gothic. The proposed buildings comprise a school-room for boys and girls, with a gallery at one end; an infants' school-room, and three good-sized class-rooms. It is intended regularly to celebrate Divine service in the new school. The architect is Mr. J. M. Taylor, of Manchester.

SCHOOL-BUILDING NEWS.

Tottenham.—New Green School, in Somerset street, Tottenham, was opened on the 16th inst. This building has just been erected from design and under the superintendence of Mr. E. W. Power, architect. The building is of yellow brick with red banding courses, of an Early Decorated character, consisting of a school-room, 20 feet by 55 feet, for the accommodation of 100 girls, with a class-room, 14 feet by 18 feet, and lavatory adjoining. The school and class-room have open timber roofs, with open trusses, covered in with diagonal boarding. The panels over the fireplace in the school-room have Scriptural texts, in old English letters. The lavatory is fitted up with pegs for bonnets and cloaks. At each end of the school-room are three-light windows, with circular cusped heads. The side windows are flat-headed. Over the entrance to the school is a bell turret surmounted with an ornamental stone ridge and wrought-iron cross. Attached to the school is the mistress's residence. The roofs are covered with plain red tiles, and the gables are surmounted by

lain wrought-iron finials. The whole of the uilding, with the exception of the lining round chool and class-room, gasfittings, and boundary ncing, was executed for the sum of 1,025*l.*, by fr. William Flint, of Stoke Newington, con-ractor.

THE BUILDERS' BALL.

On Thursday, the 12th of February, the Builders' Ball will take place at Willis's Rooms, t. James's, under the patronage of the Lord Mayor and Lady Mayoress, and the Sheriffs of London and Middlesex. The time, therefore, is ow close at hand. We have little doubt that the all will be as popular, as well attended, and as rofitable to the Builders' Benevolent Institution s ever. We certainly hope it may be.

RESTORATION OF AN ANCIENT TOMB IN YORK MINSTER.

Recently, "an ancient tomb has been restored, r, more properly speaking, a new monument has een completed, in York Minster; and on Christmas-ay it formed an object of attraction and admira-ion to many persons who attended Divine wor-hip. The new work of art is situate on the orth side of the nave. The monument which is ow replaced was in a very dilapidated condition, considerable portion of it having crumbled away rom old age. The task of faithfully reproducing he work has therefore been a matter of no small ifficulty; but this has been very successfully and eautifully accomplished by the workmen in the mployment of the Dean and Chapter. The escription which the local historian Torre (who rote towards the close of the seventeenth cen-ury) gives of the tomb has no doubt afforded aluable information. He says:—'In the third isle by the door of St. Sepulcre's Chapell is a onument made up in the wall, carved at ottom into a row of quaterfoils, where one may erceive a leaden coffin in the hollow of the all. Over a table is an arched roof, carved nto fleurs about the edges, and at corners two ngells perfuming with incense pans. Which onument is conjectured to have been erected for rchbishop Roger, who dyed A.D. 1181, having een the first founder of this Chapell of St. Mary nd the Holy Angells.' On removing the old onument, the workmen laid bare the 'leaden offin' referred to in the above extract. The offin, however, is, more strictly speaking, a long arrow wooden box encased in lead, clearly de-oting that this was not the original place of epulture, but that the remains of the deceased whoever he was) had been deposited elsewhere, nd subsequently removed to their present re-narkable position. After a lapse of centuries the ox has been found to contain fragments of a estment composed of cloth of gold, and indicative f the rank of the person interred. On this point, herefore, the well-known quaint historian of ork, Gent, is to some extent correct when he ays (speaking of Archbishop Roger),—'Partly nder the third window he lies interr'd, or rather mmurr'd, and where his coffin is to be seen and elt at this day [1730], for I am inform'd that is ot the tomb of a workman who was kill'd by a all from the high walls of the church, as is gene-ally reported; neither does it appear in reason hat it should be that of an architect, but a more ignify'd person, even an archbishop, and an arch-ishop, too, who was the founder, and in that ense might be term'd the builder' [of the ad-oining Chapel of Mary and the Holy Angels]. Gent, in a note, adds, 'It is said also that an rchbishop or two have been bury'd in the chapel aforesaid;" and it may be that the remains of one f these dignitaries were removed, when the chapel was destroyed, and placed in their present curious situation. The following extract from 'Brown's Guide to York Minster' may throw some light on his inquiry:—'In the north wall [of the nave] he visitor will observe a tomb of singular form, rroneously supposed by some writers to contain he mortal remains of Archbishop Rogers, who ied in 1181,—that is, about 110 years before his part of the cathedral was begun to be built. The more probable opinion is, that it contains the remains of Archbishop Thoresby, who thus lies near the earliest archbishops; and, being a true over of the Blessed Virgin, is thus placed near he entrance to her chapel, the doorway of which s surmounted by a figure of her bearing the Divine Infant, under a canopy of exquisite work-manship.' Here we must take leave of a subject which, it will be observed, is open to considerable controversy, and it may be that the question may never be determined beyond the possibility of doubt. However this may be, we may safely conjecture that the tomb is that of some of our early archbishops, whose crumbled remains, so long exposed to public touch, if not to public gaze, will now, thanks to dear Duncombe, lie unmolested, it may be, for ages to come." The remains of the ancient tomb, of which the new one professes to be a copy, have been removed to the mason's yard of the cathedral—that forlorn wilderness of ancient remains. To that receptacle for regretted antiquities the fine old figure of one of the Barons Percy was removed some years ago (when Mr. Bannester was master of the works). It stood at the east end of the cathedral in a niche. It has been suggested by some one that our cathedrals should have a sort of museum, where ancient remains could be deposited, were it thought necessary (in an artistic point of view, it could not be in an antiquarian, because a genuine ancient monument is far more valuable, though mutilated, to the historical antiquary than the most beautiful restoration) to remove them. From all one reads in the pages of the *Builder*, the impression only becomes stronger of the necessity of having a "Minister of Public Monuments" in the Privy Council, as we already have of "Education," to preserve our precious historical monuments from destruction. What you detailed of the wanton and most uncalled-for destruction or removal of ancient shrines, monuments, &c., at Hexham Abbey Church, some time ago, proves this, and York Minster is no exception.

York.

SOUTH KENSINGTON.

Westward still the tendency of the town continues to advance; the chief incentive for preference being, first, the open Park; a space of woodland, lawn, lake, glade, and flower-garden, not to be found within the precincts of any other city; the second valued attribute being its dry superstratum of yellow gravel—in many parts of great depth—which absorbs freely all rainfall and surface water.

On both north and south sides of the Park and gardens this wondrous extension progresses in nearly an equal ratio; and yet these free and open liberties form a barrier, for *a mile and a half*, restrictive of *commercial traffic*, at all times of the day, and of private intercourse after ten p.m. in totality,—a wide river for the whole length would be less obstructive of intercommunication, and there is no example of a town or city of the same extent, seated upon a river, without several bridges of intercourse. To form an estimate of the necessity for an open public thoroughfare across the Park, even after nightfall, it is only necessary to observe the current of foot-passengers who throng all the traverses between Brompton and South Kensington on one side, and Bayswater and the Marble Arch on the other. This is a bad illustration of enlightened polity; and it is to be hoped that whatever the Chief Commissioner may do as to the route opened temporarily during the Exhibition, Parliament, which is now about to assemble, will deal with a subject so essential to the commonweal.

What ranks next in importance as respects the final completion of the truly noble quarter of South Kensington, is the adaptation of the Exhibition buildings with the 100 acres of ground under management by the commissioners. This site was laid out under the auspices of his Royal Highness the late lamented Prince Albert, who bestowed the most unremitting attention upon the smallest details of the estate. In the too short period of his tutelage all that now exists was based and planned. The solid structure itself was purposed to be permanent, and should be made so. The annexes will doubtless be removed, and the question is, to what use those extensive sites are to be employed. A surmise, which nearly amounts to a rumour, apprehends that, in case the Royal Commissioners should not obtain an Act of Parliament authorizing the transference of part of the British Museum thitherward, it is under review, if not decided upon already, *to let out* the whole of the marginal reserves nearly encompassing the "Horticultural Gardens" on building leases! This extent of frontage, amounting to some 5,000 feet, along the Kensington Gore, the Prince's and the Exhibition roads, would (as it averages a great depth) realize something like 15,000*l.* per annum. No one could accuse the Royal Commissioners with being *unthrifty* stewards were they to net an income after this fashion; but he might call in question their good faith with the subscribers to the Gardens, with the building proprietors who have expended large amounts in ranges of costly mansions flanking the Exhibition, the Prince Albert's and the Cromwell roads, as well as the splendid squares and terraces in close propinquity, and also as regards the public who approved, admired, and respected the objects cherished by the late Prince.*

Amongst those objects, even the laying out of the adjacent building quarters had especial care. It was proposed and laid down on plan, that between the Prince Albert and the Gloucester roads there should be *two complete traverse routes from east to west*; but there is also a central thoroughfare called Elvaston-street. Now the value and importance of this intermediate space, which we may designate as an Upper Belgravia, must be determined by its direct intercommunication with the Prince Albert's-road; without such thorough traverses these streets and terraces, approachable only by right angles and detours, would be a quarter *en arrière*; and in such case the value of rental must suffer very great depreciation; yet on looking at the half-formed roads, as heaped out and demarcated by fences, it is clearly intended to cut short Elvaston-street by a range of houses in front to the Exhibition.

Another feature that is remarkable in this fashionable neighbourhood would seem to be an exception to what in all other new quarters of edification amounts to a requirement—there is no church! In other rising localities, wheresoever four or five hundred houses have been completed, and even before they are occupied, a district church or chapel of ease is sure to arise. There is plenty of space, and the dedication of a square of 100 feet out of the Great Exhibition estate would not be viewed by the public as an extravagant malappropriation. Private proprietors, at Onslow-square and Earles-court, not very distant, have set apart sites for churches; such liberality proving in general not prejudicial to worldly interests.

There is, lastly, one circumstance which in this neighbourhood is a bar to progress and a nuisance, namely, the toll-bars of Kensington and Earles-court. A movement is already in action to withdraw these obstructions, if not to abate them. Let us hope that the requiem of the toll has rung, and that it will soon be as a thing of the past.

Quondam.

A JUDGE'S NOTION OF A BUILDER'S PROFITS.

Marshall v. *Harrison*.—This action, tried in the Hull County Court before Mr. W. Raines, was brought against the defendant, who resides at Gilberdyke, to recover 3*l.* 10s. 7d. for work done and goods delivered. It appeared that the plaintiff had done certain repairs to a house occupied by the defendant.

His honour remarked that the plaintiff, like others he had noticed, charged one price for workmen's wages, while he paid a different sum: for instance, the employer paid his men 3s. per day and charged 3s. 6d. He should like to know what right they had to charge a per-centage on their workmen's wages: it seemed like cheating both the customer and the workman!

The plaintiff said that it was customary to do so.

Ultimately the plaintiff not having brought with him some necessary witnesses, his honour said he should give a verdict for only part of the claim, or nonsuit the plaintiff.

Mr. Pettingell, for the defendant, said he would take a nonsuit.

In what way does the judge suppose a builder is to be remunerated for the outlay of his money, the rent of his premises, his own attention, and his skill? Truly "a learned judge!"

LANDLORD AND TENANT.

LAW OF DISTRAINT.

Attack v. *Bramwell*.—The point raised in this case (heard in the Court of Chancery, Jan. 26th), was of some importance in regard to the law of landlord and tenant. The defendant (the landlord), rent being due from the plaintiff (his tenant), entered the house by the window and distrained, and removed; more rent being due

* It is most desirable, of course, that the Gardens should be kept open and the view preserved for the houses built near; but we have reason to believe it was always understood that the space in question would be built upon. Breach of faith, therefore, there would not be. Moreover, the commissioners require money to meet their engagements; and we may almost conclude that if the Government do not speedily agree to take the land for public purposes, it will be let to build houses on.—Ed.

than the value. The tenant sued for this, and the case was tried before Mr. Justice Blackburn, who told the jury that they were to give something for the wrongful entry, but that as regarded the taking of the goods, as rent was due, they ought, in giving damages, to consider that the amount of the rent was due. The question was whether this direction was right, or whether the plaintiff was entitled to the full value of the goods.

Mr. Henry James, for the landlord, argued that the direction was right; for, as regarded the goods, the tenant had the benefit of his rent being satisfied, and that the taking of the goods was not wrongful.

Mr. Serjeant Shee (with him Mr. Woollett) argued for the plaintiff (the tenant) that he was entitled to the entire value, as the entry was wholly wrongful.

The Court, in the result, so held, and decided that the plaintiff was entitled to recover the entire value of the goods, without deducting the rent. The entering by the window, they said, was just like breaking the outer door, and made the landlord a wrongdoer from the beginning, and the distress utterly void.

RATING GAS MAINS.

The Queen v. Wm. Burton Head and the Metropolitan Board of Works.—This was an appeal, at the Court of Queen's Bench, before Lord Chief Justice Cockburn and Justice Crampton, from the Quarter Sessions. The Imperial Gaslight and Coke Company appealed against a sewers rate upon their property at Fulham, on the ground that their mains and pipes in the land in question were only used for lighting the parish roads with gas, and that therefore they ought not to be assessed so high as house property, which derived a great and important benefit from sewerage. The Quarter Sessions adopted that view, and reduced the amount. The case came before this court to upset that decision.

Mr. Clerk and Mr. Woollett appeared for the Imperial Gaslight Company; Mr. Metcalfe for the Board of Works.

The Court quashed the order of Sessions. They fully agreed in the principle that property ought only to be rated according to the benefit derived, but the suburbs of London were so constantly undergoing change that a hovel to-day might be changed into a mansion to-morrow. The principle that should guide the court should be the benefit derived by the broad area from the sewerage, and as soon as that was established the exemption claimed was gone.

Order quashed.

PATENTS CONNECTED WITH BUILDING.*

WATER-CLOSETS. — *W. T. Smallwood, Limehouse*, and *W. Wright, West India Dock-road, London*. Dated 31st May, 1862.—This invention consists, first, in simplifying the constructing of the water conducting and stopping media by placing the same at the front of the closet. Secondly, in so placing a valve or tap upon the service-pipe, and coupling the same thereto, that it may be readily unshipped or detached and replaced at sea, or when out of repair, without removing or disturbing the other parts of the closets, thereby rendering the operation capable of being performed by any ordinary workman or person unskilled in the manipulation of these articles. Thirdly, in forming and fitting the plug of the stop-tap so as to turn upon or within the spindle, carrying a seated valve at the bottom of the soil-pan, and in mounting a tumbler lever upon and between the said plug and spindle for actuating the same. Fourthly, in so forming the male and female parts, or couplings of the plug and spindle, that one may be partially moved about their common axis independent of the other, thus providing the means by which a single lever is rendered capable of first opening the tap or valve on the service-pipe, and then tipping the valve or pan at the bottom of the soil-pan, or *vice versâ*.

VENTILATORS. — *T. Guibal.* — The patentee claims the arrangement of a rotary ventilator or fan, the case of which communicates with an outlet passage increasing in sectional area as it passes away from the case, and which has a regulating slide following the curve of the case to adjust the size of the outlet therefrom, as described.

VENTILATOR.—*E. T. Nouailhier.*—This improved ventilator is intended to considerably increase the draught of the chimneys at the extremity of which it is placed. It is essentially composed of two hollow and concentric cylinders of sheet iron or zinc. The two cylinders are in their entire length separated from each other by a small circular space which leaves a free passage for the air. The inner cylinder represents but the continuation of the chimney flue: it terminates at about the middle of the length of the exterior cylinder in which it is contained. This latter is completely closed at the extremity which corresponds with the lower extremity of the inner cylinder, and contrary to which is immovable: it will pivot around its congener when the slightest rotary motion is given to it. Further, it presents on one of its faces a large open throat, and on its opposite wing, which forces this throat always opposite the wind.

VENTILATING, COOLING, OR SUPPRESSING FIRE IN PUBLIC AND PRIVATE BUILDINGS OR ROOMS *C. S. Duncan.*—This invention consists essentially in an arrangement of pipes for distributing water over the roofs of buildings or rooms for the purpose of cooling them, or for extinguishing fire, and in carrying such pipes into every room of a warehouse or other building.

IMPROVEMENTS IN THE MANUFACTURE OF CEMENT.—*A. Y. D. Scott.*—Here the patentee claims subjecting lime in the pulverized state to the action of sulphurous acid gas, and an oxydizing agency, in the manner and for the purpose described.

* Selected from the lists in the *Engineer*, &c.

Books Received.

VARIORUM.

"THE History of Clerkenwell. By the late W. I. Pinks: with Additions and Notes by the Editor, E. I. Wood. Printed and published by the Proprietor, J. T. Pickburn, Myddelton House, Clerkenwell. Part I. January, 1863." The material on which this new serial is based first appears, if we mistake not, in the *Clerkenwell News*. It is illustrated by engravings, and is likely to form an interesting volume. We may quote a passage on the alarm in the seventeenth century at the growth of London:—

"In 1683, Sir William Petty, in his 'Political Arithmetic,' expressed considerable alarm about the suburban increase of the metropolis. London, in 1682, contained about 670,000 persons. The growth of London would, he predicted, be at its greatest height in the year 1800, when its population would be eight times more than in 1682, or 5,360,000 souls, and stop before 1842, when it would be double the former number, and the population be equal to that of the rest of England. [How could it be at its greatest height in 1800, Sir William, if it did not stop till 1842?] Time has exposed the fallacy of such reasoning, and London—

'opulent, enlarged,
And still increasing London,'

with its suburbs included, has not attained a population of much more than half the number predicted.

Less than a century ago a strong desire to stunt the growth of London seems to have possessed the minds of our forefathers. It was the same bugbear that had disturbed the peace of generations before them: they were alarmed lest the off-shoots should impoverish the parent stock, and predicted that such must be an inevitable result. Ere a brick of Pentonville was laid, and whilst as yet there were in the northern parts of the parish pleasant pasture lands, hedgerows, flower gardens, and, it may be, cornfields, it was proposed to make the New-road the great boundary for restraining the ruinous practice of building on the north side of the town. In a book entitled 'London Improved,' published in 1766, the author avows that it is his intention to 'advise that proper bounds may be set to that fury which possesses the fraternity of builders' by imposing severe 'penalties,' since if 'they are permitted to proceed at their accustomed rate, we may expect to find the hills of Highgate and Hampstead a considerable part of the suburbs of London; and when the limbs extend themselves so fast and grow out of proportion to the body which it is to nourish and sustain, it may be very rationally supposed that a consumption will be the consequence.'* Time has realized the expectations of this alarmist, and it has also shown how fallacious were his reasonings."

——"The City on the River: a Poem; with a Few Remarks on the Benefit and Utility of Detached Suburbs. London: Mann, Nephews, Cornhill, 1862." The author of this pamphlet has a different idea as to the growth of London from either Petty or Gwynne, but we suspect not a more correct one. He considers that the necessity for great cities is now at an end,—an idea the correctness or force of which is not clear. The present tendency is for the great to become greater. His desire to substitute detached suburbs for one never-ending mass of brick we could more cordially agree with were it practicable, which, systematically at least, it is not; but doubtless such more or less detached suburbs as Hampstead, Highgate, Sydenham, &c., will multiply still farther now that railway conveyance is extending; and when the nearer ones are eaten up by the ever-growing monster city, new ones still farther off will be appropriated and extended like the old. In fact, this has been the natural process for hundreds of years; and it is likely to be so for hundreds of years to come. Suburbs, detached and semi-detached, are already a feature of the metropolis, and scarcely require to be written up.

——"Report from the Provincial Engineer [of Canterbury, in New Zealand] upon the Progress of Public Works, from October 1st, 1861, to June 30th, 1862. Christchurch, Canterbury: Ward & Reeves, Official Printers to the Provincial Government of Canterbury." Roads, bridges, railways, and telegraphs are what the provincial engineer, Mr. Edward Dobson, is busy with at Canterbury. The chief expenditure on public works reported on was made in the northern and central districts of the province, and amounted to 26,293*l.* according to a return by the assistant provincial engineer, Mr. James Wylde, in the appendix to the principal report. On the contracts in hand the sum of 22,405*l.* remained to be paid. The total amount of payments and liabilities on these contracts was 48,699*l.*, and the gross amount of votes for the public works of these districts was 69,647*l.*——"On our Knowledge of the Causes of the Phenomena of Organic Nature. By Professor Huxley, F.R.S. London: Hardwicke. 1863." This volume consists of six lectures to working men, delivered at the Museum of Practical Geology. It is admittedly, throughout, an advocacy of Mr. Darwin's celebrated work on the "Origin of Species," which Professor Huxley believes many of the more thinking men among the working classes (and not a few such there are nowadays certainly) have pondered over. The subject is handled with the professor's usual ability; and Mr. Darwin is fortunate in having his very advanced views set forth by a lecturer such as Professor Huxley. It is not for us here to enter on the question of the origin of species, either *pro* or *con.*; but we may remark that at all events Professor Huxley confesses that, through the careful and ingenious experiments of M. Pasteur mainly, "the doctrine of spontaneous generation has received a final *coup de grace;*" although to this admission the Professor adds the "saving clause," as the lawyers would say, that of course "this in no way interferes with the *possibility* of the fabrication of organic matters by the direct method" to which he had referred, "remote as that possibility may be."——William Thomas's Universal Newspaper and Periodical List. London: Thomas, Advertising and Newspaper Office, Bridges-street, Covent Garden. 1863." This is a very full list of newspapers and other periodicals, and is said to contain "all the newspapers, with their politics, prices, &c., published throughout the United Kingdom; also all the weekly, monthly, and quarterly magazines and periodicals, their publishers, price, place, time of publication, &c., together with the principal foreign newspapers." Doubtless amid the many changes which the newspaper press has undergone of late years perfect accuracy cannot be expected; but on the whole, and so far as we have noted, the list appears to contain much correct information.

* Gwynne's "London Improved," 4to., 1766, p. 16.

Miscellanea.

WATER-COLOUR ARTISTS' LANCASHIRE FUND. Mr. Fahey has been enabled to forward a second 500*l.* to the general committee.

LOCOMOTIVES ON RAILWAYS.—The total number of locomotives at work in England and Wales at the date of a recent return was 4,956; in Scotland, 848; and in Ireland, 352; making an aggregate of 6,156. Assuming that the average cost of each of these locomotives was 2,500*l.*, the capital invested in them would be no less than 15,390,000*l.*

THE OPEN SPACES AND GARDENS OF LONDON.—At a Court of Common Council, held at Guildhall, Mr. Alderman Hale presented a petition from the inhabitants of Finsbury-circus, praying the Court to use its influence to obtain an Act of Parliament to protect for ever the open spaces and gardens of London, and to oppose the projected Act for the destruction of Finsbury-circus and adjacent houses. The petition was referred to the Bridge-house Estates Committee, to examine and report upon the allegations it contained. It is sincerely to be hoped that the desirability of preserving open spaces will be everywhere remembered.

EARLY ARCHITECTURAL SOCIETY.—In reply to an inquiry for the earliest architectural society in *Notes and Queries*, a correspondent in that publication has written:—"The earliest, I believe, to have been the 'London Architectural Society,' founded in 1806. The members who instituted this body were J. Woods, junior, president; J. Elmes and Savage, vice-presidents; and Aikin, W. H. Ashpitel, Samuel Beazley, Billing, Birkhead, Bubb, Busby, Cood, H. Elmes, Lowry, Peacock, Perry, Schroder, C. Smith, G. Smith, J. Taylor, J. Wallen. Singularly enough, the last three named are, I believe, the only survivors. The Society published a volume of Essays about 1808, which was very well received at the time, and has now become extremely scarce."

ELECTRO-TELEGRAPHIC PROGRESS.—It is announced that a submarine cable has just been successfully laid by Messrs. Glass, Elliot, & Co., between the port of Cagliari, in the Island of Sardinia, and Trapani, in Sicily,—a length of 200 miles.

MORTLAKE, SURREY.—This parish has been resurveyed, mapped, and valued by Mr. A. J. Hiscocks, of Wandsworth. At a recent vestry meeting of the parish, the new map and valuation were approved of. Public gas-lamps have been put into the principal streets for the first time. There has been a considerable increase of buildings here within the last few years, and as to this hitherto "Mort-lake," it may now be said—*resurgam*.

DRINKING-FOUNTAIN MOVEMENT.—A drinking-fountain, the gift of Mrs. Isaac Hodgson, has just been erected in Leicester, at the north-west corner of St. Martin's Churchyard, near the police-station, in Town Hall-lane. Mr. Firn erected it under the superintendence of Mr. Stephens, borough surveyor. It is on a Yorkshire stone landing, with Bolsover columns, Red Mansfield bases, and carved capitals of Ketton stone. The bowl, of Cheesewring granite, is placed on a ground of encaustic tiles from Mr. Whetstone's works at Coalville, under a coped Gothic arch, with carved springers and a carved finial at its apex.

THE PROPOSED WET DOCK AT WHITEHAVEN. At the usual monthly meeting of the Whitehaven Town and Harbour Trustees, held on Monday, the clerk read a letter from Mr. Rendel, stating that he had received a packet of plans for a wet dock, and that he should endeavour to forward a report upon them to the trustees in time for their February meeting. The clerk reported that the following plans had been sent in:—Mr. John Askew had sent in a plan for a dock on the south side; Mr. Thomas Fearon a plan for docks on the north and south sides; Captain Joseph Bell, a plan for an extension of the harbour, but neither by means of a wet dock nor a tidal basin; Mr. George Dawson, a plan for a dock on the north side; Dr. Fox, a plan for a dock on the north side; Mr. Miller, a plan for a dock on the south side; and a shipowner has sent a plan for a dock both on the north and south sides.

LIBRARIES FOR WORKMEN. — Means for rendering the toil of the working classes less tiresome, and of enabling them to enjoy the blessings of life without that galling of the yoke to which the mere animal of labour is subject, are most desirable. Mechanics' institutes, libraries, and similar institutions for the improvement of the people, are acknowledged as resulting in much good, an example of which has been shown in the conduct of the population of Lancashire in one of the severest trials which the country has undergone. We have for many years recorded the efforts made in large establishments in this direction, and have more than once noticed the library connected with the printing-office of Messrs. Cox & Wyman, Great Queen-street (where the *Builder* is printed). We are glad to see the subject discussed generally by the press, and hope that few places where large numbers are employed will be without their library. We have before us the annual report of the library of the printing-office mentioned, which was read at a meeting of the members by Mr. J. Bate, the chairman; and we are led to repeat the expression of our hope that the example set will be numerously followed.

A NOVEL BUILDING AND A LUCID EXPLANATION.—The following paragraph appeared in a contemporary:—An uncommon building undertaking.—Near the post-office, Earlswood, a female has possessed of a piece of ground, on which she has commenced erecting a house. The unusual occurrence is, that she is her own surveyor, and carries on the work without any assistance. It appears the house, when complete, is for her own dwelling; but, judging from the present appearance, it certainly will not be very ornamental. Where the door and windows are to be seen is a query to all those who have observed the erection, as no openings are to be seen at present. What is her own business, and concerns only herself. We have received the following explanation, which we insert *verbatim et literatim*:—An uncomon Buildin near the Post office Earlwood ney maid to hasty A look at it if they had gon the Back they would hav seen A small window and A Door but Strangely maid that is why I put it at the back I should like nice Windows and floor but I have no Money to get them with nor have no Money for the Slates or Flawer any Person that have seen it I hape will have the Kindness to send me A small amount to help to Buy thim and will be most thankfully recived.—S. B———, Horwick Town, Rigate.

THE WOLVERHAMPTON SEWERAGE. — At a recent meeting of the town council of Wolverhampton, a resolution, moved by Alderman Banks, the chairman of the sewerage committee, was passed, to the effect—"That this council being of opinion that there exists an imperative necessity for immediately proceeding with the scheme for the general sewerage of the borough, which received the sanction of the council on the 13th of January, 1862, directs the sewerage committee, as a preliminary proceeding towards the carrying out of the same, to employ a competent person to examine and report upon the said scheme as to its levels, sections, and other matters of detail."

THE BRIGHTON DRAINAGE QUESTION.—At the last council meeting at Brighton, Mr. B. Webb asked the chairman of the Works Committee (Alderman Bowdidge) whether the maps and plans with reference to the drainage were ready? So much delay had taken place, that it was high time something was done. He supposed the surveyor possessed all the maps. Alderman Bowdidge replied that the plans had been ready for some time: they should not go to any more expense, but come to the council to know whether the maps should be prepared in the way proposed by the surveyor or not. He did not know when the meeting between Messrs. M'Clean and Wright and the council would take place.

FALL OF THE LYTHAM LIGHTHOUSE. — The most serious of the many disasters recorded of the late gale on the Lancashire coast is the fall of the Lytham Lighthouse, which stood on a point called the "Double Stanners," between Lytham and Blackpool, close to the high-water mark. Considerable fear had been entertained for the safety of the erection for some time past, in consequence of the great encroachments of the sea on this part of the coast; and many workmen had recently been engaged in driving piles around its base, and more particularly in the front facing the sea. The keepers had left the building, as they found it was vibrating in the most alarming manner during the storm of the previous night, and to much greater extent than had been previously experienced. The framework of the piling in front of the lighthouse had given way, and a great portion of the foundation had been undermined by the waves. Soon afterwards it was discovered that the north corner of the masonry was worked out, and the foundation laid bare down to the bottom, below the concrete, there being a large hole filled with water 3 feet below the foundation. The tide during two successive nights and days made great havoc in the foundation, when the whole building at length fell down. It is also stated that the screw pile light in Morecambe Bay, at the entrance of the Wyre, about twenty miles north of the Lytham Light, is now extinguished, owing to the insecure state of the erection, through the collision of a vessel with it.

RAILWAY MATTERS.—The traffic receipts of railways in the United Kingdom amounted for the week ending the 17th of January, on 10,588 miles, to 486,870*l.*; and for the corresponding week of last year, on 10,193 miles, to 461,560*l.*; showing an increase of 395 miles, and of 25,310*l.* in the receipts.——According to the *Patrie* on 1st January, 1863, the whole net-work of French lines conceded or sanctioned was 18,430 kilomètres (11,520 miles), of which 11,098 kilomètres (6,936 miles) are at present opened to the public. The expense calculated on for terminating the concessions already accorded is estimated at not less than 2,000 millions of francs, and the charges of the State, in money or works, will be about 350 millions. The journal then goes on to say:—From 1860 to 1862 the companies which had obtained concessions of railways have expended nearly one milliard of francs for the continuation of their task. Since 1860 the Government, which has taken on itself a part of what is to be accomplished, has devoted to the work a sum of about 90 millions.——In the kingdom of Wurtemburg all the railways have been constructed by the State. The net revenue which they produced in 1862 amounted to nearly 6½ per cent.; whilst the different loans contracted by the Government for the construction of those lines were obtained at an average interest of 4 per cent. The working of those railways now forms one of the principal resources of the budget of that State. Among the other German Governments, Hanover, the Grand Duchy of Baden, and the Duchy of Brunswick, have also constructed all their lines, which have as yet produced a revenue of from 4 to 6 per cent. In Bavaria and Saxony the greater part of the railways belong to the State; but in Prussia the Government has only constructed those of Westphalia and that from Berlin to Königsberg and the Russian frontier.

A ROYAL EDITOR.—Macaulay's New Zealander is preparing the way for his grand stand on the ruins of London Bridge. Catalri, one of the Maori kings, has just published the first number of his new *Gazette!* He says: "The press which has arrived at Ngaruawahia,—from it proceeds the newspapers,—exceedingly powerful to settle matters! When it comes to you, the price is threepence: pay it if you approve. The good of this press is to carry our intentions to the tribes of the world; because steadfastly fixed are the words of the beginning—'Faith, love, law!'" An excellent motto for a savage to begin with.

THE PROPOSED POPULAR SANITARY SOCIETY.—Since this society was suggested in the *Builder* we have had a good many letters approving and urging the realization of the idea, and we are also glad to observe that it has been taken up by other members of the press. Although the communications are not yet numerous enough to justify the foundation of the society, we hope this will ere long be the case; meantime we would advise those who have taken an interest in the subject not to lose sight of it, nor to imagine that it has been dropped merely because no active steps for the establishment of the society have as yet been taken.

WORKING MEN'S CLUB AND INSTITUTE UNION. During last week the Rev. H. Solly, of London, secretary of the above Union, has visited Birmingham and South Staffordshire for the purpose of promoting the establishment of working men's clubs in this important manufacturing centre. Meetings have been held in Birmingham, Dudley, Stourbridge, Wolverhampton, and West Bromwich; and in each place steps are now being taken for carrying out the object of the union. In Wolverhampton there is every prospect that a sum of nearly 300*l.*,—the proceeds of a series of entertainments for the working classes,—will be devoted to fitting up suitable club-houses. The South Staffordshire Educational Association is warmly supporting the movement, and there seems every reason to hope that in a very short time these clubs will be opened in all the important towns of that populous neighbourhood.

MACHINERY FOR CUTTING MOULDINGS.—Mr. James Simpson, of Hulme, Lancashire, has invented machinery more particularly applicable in the manufacture of "mouldings" by hand, but steam or other power may also be applied to the apparatus. The machinery or apparatus, as described, with illustrations, in the *Engineer*, consists in a heavy bar of metal or wood, supported upon a shaft at the centre of the length, this shaft having bearings in a suitable framing. At one or each end of this bar or block a blade or cutter is secured, so formed as to cut the material under operation into the form or moulding required; the bar being caused to rotate by means of a handle on the centre shaft; a self-acting feeding apparatus being provided to propel the wood. The action of the cutters upon the material partakes of a chipping nature; the chief feature in the invention being the distance of the cutters from the centre of support, whereby more leverage is obtained, and greater steadiness is effected in the cutting; the high velocity of revolution not being required, as in smaller revolving cutters.

ALARM OF FIRE AT ASTBURY CHURCH, CONGLETON.—When the warming apparatus, lately put into the restored church, was adopted, an old flue was made use of to carry the smoke from the new fire-hearth, which is situate twenty yards off, under the churchyard wall. From this the flue passes under the churchyard to the church, and there ascends by a new course made in the thickness of the wall to the middle chamber, whence it continues up the old flue to the top. The old open fireplace was closed up, but before doing so it was noticed that the joints of the first-floor were inserted right into the chimney. They were removed and all made safe in that quarter, but the same defect of construction was suspected to exist, and as it now turns out, truly, in the upper floor and in the roof itself; and yet this most unsafe state of matters thus admittedly suspected was allowed to remain just as it was, although with the greatly increased risk arising from modern ideas and arrangements for warmth and comfort. Probably, however, no danger was apprehended from the fireplace being at so great a distance. Last week a fire was accidentally discovered to be taking hold of both rafters and boards of the upper roof close to the chimney, and the lead was beginning to drop molten from it. A supply of buckets full of water soon put an end to all mischief and fear, notwithstanding the fanning of the fire by the violent westerly gale which blew all night and morning. Another half hour and all would have been too late.

HORRIBLE MUTILATION.—A shocking accident has happened to a slater, under the following circumstances. The unfortunate man was in the act of cutting a slate slab with a circular saw, at Mr. Sharp's, slate cutter, Tooley-street, when the slab slipped and he fell on the saw, and in a moment his shoulder and arm were cut off. His cries brought assistance, when the machinery was stopped, and he was conveyed to Guy's Hospital, where every assistance was rendered; but he remains without the slightest hopes of recovery.

PARISIAN FIRES AND FIRE BRIGADE. — The Londoners have just received a strange awakening by the publishing of the Paris fire-statistics, from which it appears that Paris, with its one million of inhabitants, has, in the past year, had but 206 fires; while London, with its three millions, has had 1,303; but Paris has nearly 1,000 well-trained firemen, while London has less than 200! It should, by comparison, be 3,000! Probably this fire news from Paris will induce our metropolitan authorities to extend and consolidate their present system.

HALIFAX SCHOOL OF ART.—This school is being re-opened with improved prospects. The school has been painted and made much more convenient than before. Mr. C. Ryan, till lately one of the head masters of the Leeds School of Art, has been appointed to this school; and an assistant master—Mr. T. W. H. Robinson—has also been added to the staff. A course of art instruction is about to be given by Mr. Ryan, and prizes have been offered for competition in the school by the president, Colonel Akroyd; by the mayor; Sir F. Crossley; Mr. Stansfeld; and others interested in art progress.

THE PLAYGROUNDS IN VICTORIA PARK.—A memorial, signed by a number of influential persons, including the names of Rothschild, Duke, Grote, Layard, and many others, has been presented to the Commissioners of Works and Public Buildings, representing that many clerks and working men employed in the City have, in consequence of early closing on Saturday afternoon, taken great delight in the establishment of cricket clubs, and that they play in a portion of the Victoria Park set aside for the purpose. The ground thus used is, however, rough, and the space is so limited that accidents frequently occur with the balls. The memorialists therefore respectfully request that inquiry may be made as to the practicability of forming a properly-kept and more extensive cricket-ground for the use of the poorer classes who reside in such vast numbers in the east of London.

SCULPTORS' COPYRIGHT.—Mr. Smith, sculptor, of Mount-pleasant, Liverpool, brought an action, which was tried before the Liverpool magistrates, against Mr. Reynolds, waxwork proprietor, Lime-street, Liverpool, to recover compensation, under the Statuary Copyright Act, Mr. Allsop having copied a bust of Tom Sayers which had been modelled by him. The facts of the case were these:—Smith executed a bust of Sayers some time about the middle of last year, and registered his copyright. Reynolds, however, obtained a copy from some person in Liverpool and proceeded to make a "pieced" model of it. When the proceedings were instituted, Reynolds had cast several copies; and, as Smith alleged, had sold about forty. Reynolds admitted that he had made the models, but denied that he had sold any. The penalty prescribed by the Act was the payment of a sum of not less than 5*l.* and not more than 30*l.*, the penalty to go as damages to the plaintiff. The magistrates inflicted a penalty of 20*l.* and costs.

CANDELABRA FOR THE NIZAM OF THE DECCAN. We are informed that Messrs. Defries & Sons, the manufacturers of the monster Crystal Chandelier and Candelabrum, in the International Exhibition, the latter of which, no doubt, many of our readers will remember was erected only during the last month before its close, have just concluded a contract for the construction of five similar candelabra for the Indian prince above named. It may be taken as indication of the progress which European, and more particularly British, influence is making in the Eastern world. The candelabrum is to be fitted for 144 lights, and so are also the other four which have to be made, but in those coloured cut-glass, of various tints, is to be introduced. The scene produced by the illumination of those five gigantic candelabra, with their 720 lights, will be something startling. The palace in which these candelabra are to be used, is now in the course of erection for his Highness the Nizam, and Messrs. Defries are to execute for the same palace two prismatic mirrors similar to those supplied by them to the late Sultan of Turkey. The entire cost of the candelabra and mirror is 15,000*l.*

BELFAST HARBOUR ENGINEER.—At a meeting of the Belfast Harbour Commissioners on the 20th inst., for the appointment of a resident engineer, the following six candidates, who were selected out of forty-eight who applied, were sent for:—Messrs. J. Mitchell, Manchester; R. Salmond, of the Clyde Navigation; Peter Stuart, Harrogate; C. J. Casebourne, Hartlepool; J. Thomson, Greenock; and J. Lizars, Liverpool. Ultimately, Mr. Lizars, was elected.

INSTITUTION OF ENGINEERS IN SCOTLAND.—The usual monthly meeting of this institution has just been held; Mr. W. Johnstone, president, in the chair. Mr. J. E. Napier read a paper on an "instrument for drawing nails from timber," illustrating his remarks by exhibiting the apparatus. Mr. Napier also read a paper on "an addition to a steamer's bilge pumps," and explained it by reference to diagrams. On both papers discussions followed. Mr. Gilchrist then exhibited part of a corroded shaft of a screw propeller, and explained how extraordinarily quick had been its corrosion; throwing out a few suggestions as to the cause thereof. It was reported that the joint committees of the Philosophical and Engineers' Societies were actively engaged in making arrangements for the approaching *conversazione*, which is to be held jointly by these institutions on the 11th of next month.

YORK GUILDHALL WINDOWS. — A memorial window is about to be erected to the late Mr. Alderman Meek, in the York Guildhall; and as the intention has been to remove the old stained glass in the western window and replace it by the proposed memorial, the committee have been memorialized on the subject by several influential gentlemen who object to the removal of the present glass, which is now 200 years old, and is the best specimen of Edmund Gyles's art-workmanship. The memorialists suggest that one of the side windows might be chosen for the memorial, and remark that probably the example thus set would lead to the insertion of stained glass memorials in the other side windows. The memorialists, we think, are quite right in urging that the old glass should not be removed, and that side lights should be filled in the way suggested. Let each period leave its own marks.

STATUES AND MEMORIALS.—Messrs. Dennis Lee & Welsh have just placed under the statue of the late Mr. Baines, at Leeds, a block of polished granite. In front of this pedestal is the inscription, carved in letters of gold.——The inhabitants of the village of Studley, in Wiltshire, have hitherto been obliged to carry their drinking-water from a distance, or to get it from private springs. A well more than 80 feet deep has been dug, and over it a pump of Gothic character, with a drinking-cup, has been placed, in resemblance of the ancient conduits. Above this is a memorial stone erection in the Decorated Gothic style, consisting of an arched recess, supported on shafts and embellished with carved corbels. Between the arch and the gable is a niche for the inscription, and the whole is surmounted by a floriated cross, giving a total height of 30 feet from the ground. The well and canopy are erected to the memory of the late Mrs. Hardman, of South Hill, Toxteth Park, Liverpool, and of Studley Parsonage, by her only son, the Rev. J. W. Hardman, A.M.

SAWDUST FOR STABLES.—One of the papers reports Dr. Dodd as objecting to the use of dry sawdust as a litter for stabled horses, on the ground that it absorbs the natural and healthy moisture from the hoof, and renders it brittle and dry, and so leads on to cracked and contracted feet, to corns, and similar diseases. I had supposed this "eminent veterinarian" too sensible to hold such an opinion. If the pores of a horse's hoof were open and coarse, say like a piece of sugar or sponge, the sawdust might absorb moisture from them injuriously. If I lay a sponge on my hand it does not take up its moisture. If I spread sawdust on my hand it will absorb whatever perspiration or other wetness there may be on the skin, but it will do nothing more. So sawdust will take up whatever liquid manure there may chance to be on the floor of the stable, but it will not suck moisture out of the horse's hoofs. In my own practice I have long used sawdust to keep the horse's feet moist, though I do not for this purpose use the dust in a dry state. I spread it over the entire floor, two inches thick, sprinkling that which is under the fore feet with water, just enough to keep it moist. The dust under the hind feet gets moistened in other ways. By this means the hoof is kept soft and moist, almost as much so as if the animal were running at large in a pasture. Of the valuable liquid manure saved in this way, I need not now speak.—*Correspondent of the American Agriculturist.*

LESSOR AND LESSEE.—It has been decided by the Lords Justices, in the case of Ogden *v.* Fossick, that the Court of Chancery will not decree specific performance of a contract for a lease of premises, where one of the stipulations of the contract is that the lessee shall engage the personal services of the lessor in the business to be carried on upon the premises.

FATAL FALL OF A CHIMNEY-STALK AT STEPNEY.—During one of the late strong gales the chimney-stalk of a small house at Stepney fell upon the roof, which it drove inwards, covering a bed on which a man and his wife and two children lay; and killing the woman. The family had only been three months in the house. The coroner's inquest has been adjourned for inquiries as to the state of the premises.

CIRENCESTER CHURCH. — The committee at Cirencester are issuing their appeal to the county of Gloucester, and to the public generally, for the requisite funds for restoring and repairing their fine parish church. The sum of necessity required for substantial purposes is stated at 12,000*l.*, in which the ornamental parts are not included. The inhabitants have raised 6,813*l.* thus far.

BOOKS IN ENGLAND.—It would appear, from statements in the "Publisher's Circular," that the total number of books published in the United Kingdom last year was 4,294; or, deducting American books and books mentioned more than once because of variation in price or otherwise, 3,913. In other words, for every working hour between morn and eve, some new work is added to the enormous mass of publications of bygone years.

TENDERS.

For parsonage, St. Stephen's, North Bow. Mr. James Tolley, architect:—

Carter & Son	£1,220 0 0

Better not).—Joiner No. 2 (it depends on the length of time No. 2 has enjoyed the easement. Take proper advice).—E. G. M.—A. C. T. (inquire of some good millwright).—W. S.—E. H. C.—R. W. J.—A. S.

We are compelled to decline pointing out books, and giving addresses.

All statements of facts, lists of tenders, &c., must be accompanied by the name and address of the sender; not necessarily for publication.

NOW READY, and may be had at the Office, the TWENTIETH VOLUME of "THE BUILDER" (bound), for the year 1862, price One Guinea.

CLOTH CASES for binding the Numbers, price Two Shillings and Ninepence.

Also a COLOURED TITLE-PAGE, Gratis

SUBSCRIBERS' VOLUMES will be bound on being sent to the Office, at a cost of Four Shillings each.

THE *Times*, Sept. 15, speaking of Benson's Modern and Antique Watches in the Exhibition, says,—"As affording the most striking contrast, Mr. Benson shows with these a fresh exhibition of modern watches, with cases made from prize designs at the South Kensington Museum, some of which are fine specimens of engraving." Chronometer, duplex, lever, horizontal, repeaters, centre seconds, keyless, split seconds, and every description of watch, adapted to all climates. Benson's Illustrated Pamphlet on Watches (free by post for two stamps) contains a short history of watchmaking, with descriptions and prices. It serves as a guide in the purchase of a watch, and enables those who live in Scotland, Ireland, Wales, the Colonies, India, or any part of the world, to select a watch, and have it sent free and safe by post. J. W. BENSON, Prize Medallist, 33 and 34, Ludgate-hill, London. Established 1749.—[Advt.]

ADVERTISEMENTS.

Prices and specimens forwarded on application.

BELLMAN & IVEY, GENERAL AND ORNAMENTAL PLASTERERS, Manufacturers of SCAGLIOLA MARBLE and SUPERIOR PLASTER OF PARIS.
This Plaster, made expressly for their own business, is of excellent quality, as it is extreme lightness in weight preserves a saving of 30 per cent. in use, from its covering one third more superficies than the general plaster.
PRIZE MEDALS
were awarded Messrs. Bellman & Ivey for their Works at the Exhibition of 1851, and again in 1862.
PLASTER WORKS, 3, BEDFORD-HILL-MEWS, LIQUORPOND-STREET, E.C.
SHOW ROOMS AND OFFICE,
14, BUCKINGHAM-STREET, PORTLAND ROAD, LONDON, W.

LITTLE CASTERTON FREESTONE.
Apply for prices, &c. to
OCTAVIUS N. SIMPSON, STAMFORD;
and see Specimens at the Office of
Messrs. PINDER SIMPSON & SONS, 89, Saville-row, London, and at the Museum of Practical Geology, Jermyn-street, W.
This stone (which is a perfect oolite), is used in blocks of any portland size, and is about four feet thick in the bed. It will stand ANY WEATHER, a much used for water works, and for the building and restoration of churches. When used as ashlar work it is not necessary to place it bed-wise. It works freely with a tooth saw, and is wrought at a cheaper rate than any stone in the kingdom.

GRANITE.—The Cheesewring Granite Company, Limited, Liskeard, Cornwall.
SHOW ROOMS, 4, CANNON STREET, E.C.
London Agents—TAYLOR & TAYLOR.

HEAD OFFICE, 64, CORNHILL, LONDON, E.C.
WILLIAM J. VIAN, Secretary.
Railway Passengers' Assurance Company, empowered by Special Act of Parliament, 1849.

MR. H. CONOLLY begs to announce that the BUSINESS as recently advertised in "The Builder," "To Plumbers, Builders, &c. at the West End," is DISPOSED OF.
20, Hampstead-road, N.W.

PLUMBERS, PAINTERS, and GENERAL CONTRACTORS.—An OFFER presents itself to a Person of Small Capital (with good security), in a very Old established BUSINESS, a few miles from London. A more ADVANTAGEOUS OFFER would be entered into with a respectable person who can command good TRADE.—Apply to Mr. HISCOCK, Messrs. Franks, Lead Merchants, Borough, Southwark.

TO BUILDERS and OTHERS. -WANTED to PURCHASE, the WHOLE or a SHARE of a BUILDER'S BUSINESS, within four miles of London. City preferred.—Address, A. B. Mr. W. A. Kilby, Solicitor, 173, Fenchurch-street, E.C.

PHILBROKE ESTATE, at Leytonstone, on the Woodford and Loughton Railway, twenty minutes from Fenchurch and Bishopsgate Stations.—This valuable FREEHOLD ESTATE (land-tax redeemed), surrounding the Station, but thickly wooded, gravelly soil, excellent drainage, water and gas laid down, roads made, and can be dug on the estate, it is proposed TO LET in Plots suitable for building detached and semi detached villas. Also Repeated applications have been made for houses in this neighbourhood. For terms, apply to Mr. ATHEY, at the Surveyor's Office, Philbroke Estate, Leytonstone, Essex

BUSHY PARK ESTATE, Teddington.—TO BE LET, or SOLD, the Remaining Portion of a BUILDING ESTATE, of 76 Acres, in this favourite locality, with frontages on main roads overlooking Bushy Park, five minutes' walk from the Station on the new Railway from Twickenham to Kingston, which will be opened early this spring, and within half an hour of the City and Charing-cross. The said stands high and dry, possesses a good gravelly soil, is beautifully timbered, and being in the vicinity of Twickenham, Hampton Court, Richmond, and the Thames, is all that can be desired for the erection of first class residences, which are in great demand. Advances made to responsible builders, or two-thirds of the purchase money if required. Any portion can be had on mortgage at 4½ per cent. A plan of the estate may be seen and further particulars obtained at the office of the Architects, Messrs. LAWS & DENNISON, 12, Doughty street, Mecklenburgh-square.

WOODFORD RAILWAY.—The GROVE, WANSTEAD.—Portions of this beautiful Estate are now TO BE LET for Building purposes, and Villa Residences are much required in the locality. Soil gravel, situation healthy, and water excellent. The Shoreditch Station is 20 yards only from the Estate, and the City is reached in twenty-five minutes. The Leases will contain a clause entitling the Lessee to purchase the Freehold within a specified time. LAND also TO LET at Blackheath, Tottenham, Kingston; some very eligible SITES in the Grove road, Mile-end, a few of which are adapted for shops, and large and very CHEAP PLOTS TO LET, at Ealing.—Apply to Mr. KNIGHTLEY, Architect, 23, Cannon-street.

TO ARCHITECTS and SURVEYORS.—OFFICES in the House of a Solicitor, near the British Museum, are OFFERED. Mutual business arrangements might be effected, particularly with a gentleman acquainted with benefit building or similar societies.—Apply at 9, Caroline-street, Bedford square, W.C.

TO BE LET, at moderate rent, Convenient PREMISES, comprising good Dwelling House, Workshops, Yards, Vaults, Stabling, &c. suitable for various trades, having been established sixty-two years, and carried on by late proprietor as a builder twenty five years, terminated by his death.—Inquire on the premises, 4, Salmon's-lane, Limehouse, E.

BUILDING LAND TO BE LET, HACKNEY, close to the Railway Station, for small Dwelling Houses.
NORWOOD, close to the Crystal Palace, for Shops and Villas
PERRY-HILL, SYDENHAM, for Shops. Advances in each case if required.—Apply to Mr. T. K. GREEN, 29, College-hill, Cannon-street, E.C.

FREEHOLD LAND TO BE LET, on long Building Leases, at
ROBGATE RISE,
MUSWELL HILL,
COLNEY HATCH,
BALSWATER,
CARSHALTON,
Plans and particulars can be obtained at the Office of M. C. W. HORNE, Esq. Architect, 13, Guildford-street, Russell-square, W.C.
N.B.—Liberal advances, if required.

FREEHOLD SITES for BUILDING, and FREEHOLD HOUSES, can be obtained in the best part of Prince Albert's road, near Kensington Gore, in front of the Royal Horticultural Gardens.—Apply to C. J. RICHARDSON, Architect, 47, Prince Albert's road, W.

RICHMOND, Surrey.—Valuable Freehold LAND TO BE LET for building.—1. The substantial mansion and garden known as Old House, Paradise road, capable of being divided into two residences; frontage, 62 feet; depth, 146 feet. 2. The frontage land, 75 feet depth, average 55 feet. 3. The frontage next Marsh Gate-road, 47 feet, with the back premises connected therewith, to the depth of 173 feet. The whole of the above Lots are situated within five minutes' walk of the Railway Station.—To view, apply at the mansion; and for particulars, to Mr. W. HUDSON, Architect, 15, Bennet's-hill, Doctors'-commons, E.C.

PREMISES or YARD WANTED, suitable for a Builder. Waterside preferred.—Address particulars to C. P. L. 40, Sutton-street, Belvedere-road, Lambeth, S.

ST. HELEN'S, Lancashire.—TO BE LET on LEASE, the extensive MANUFACTURING PREMISES known as the Ravenhead Copper Smelting Works, situate at St. Helen's, with a wharf on the canal, and a branch of the St. Helen's Railway running through the property. The entire site is about twenty acres, of which about five acres are occupied by the works, the remainder being arable and pasture land. The buildings comprise a series of very substantially erected, light, and lofty ground floor factories, arranged for the purposes of copper and silver smelting works; but they will be available for many other large manufacturing establishments, as they possess the advantage of direct communication by rail or water carriage with all parts of the Kingdom. Coals can be obtained from pits in the neighbourhood at an almost nominal price, and labour is cheap and abundant.—For particulars apply to Messrs. FULLER & HORSEY, 13, Billiter-street, London, E.C.; and Messrs. HARRISON & FINCH, 2, Gray's Inn, London.

THE CONSERVATIVE LAND SOCIETY.
ELIGIBLE INVESTMENTS in BUILDING LAND, GROUND-RENTS, FREEHOLD and LEASEHOLD HOUSES. On and after the 18th of FEBRUARY, 1863, will be offered for Sale, under the allotment system, the First Portion of the Woodhouse Estate, Wanstead (South, Essex), and the Last Portion of the Woodbury Park Estate, Tunbridge Wells (West Kent); as also Freehold and Leasehold Houses and Ground-rents at Old Ford, and Roman-road, North Bow, and Enfield (Middlesex), and Houses at Camberwell (East Surrey). Purchasers of land or houses may either pay up the cost in full, according to the published prices, which include cost of conveyance and every charge, or in any clear of £5 monthly or other instalments, after paying down one-eighth of the purchase-money. Full particulars of each estate, together with the Society's prospectus, explanatory of the share, Deposit, Loan, and Borrowing departments, will be supplied free of charge. The Plan of each Estate is charged 6d. or 7d. by post.
(CHARLES LEWIS GRUNNISEN, Secretary.
Offices, No. 33, Norfolk street, Strand, London, W.C.
Investors may be shareholders, depositors, or landowners at their own option, the taking of land being entirely voluntary.

LAND WANTED by the Guardians of the West London Union—About FOUR ACRES of FREEHOLD LAND, upon which to erect a Union Workhouse. The Land must be within about five miles of the City of London, and the Middlesex side of the Thames will be preferred. Full particulars, including price, to be sent to me, at my Office, as below.
JOHN PONTIFEX, Clerk to the Guardians.
5, St. Andrew-street, Holborn, January 29, 1863.

ON THE PORTLAND ESTATE. -Three capital HOUSES, with good WORKSHOPS, TO BE SOLD, together or separate, or the largest House, with four Workshops 24 feet by 12 feet 6 inches would be LET.—For further particulars apply to Messrs. LEREW & LEREW, Auctioneers, Cardington street, Hampstead-road, N.W.

TO BUILDERS.—Bayswater.—TO BE SOLD a bargain, SIX first-class CARCASES, more than half finished, well situate at Bayswater. Money advanced to finish them. For particulars, apply to Mr. CHAPMAN, Pimlico Wharf, S.W.

WATER-SIDE PREMISES on the REGENT'S CANAL TO BE LET.—This Property is most eligibly situate for any description of business which requires right of landing. Two floors 80 feet long, counting-house, five rooms, and stabling, if required.—Inquire at 34, Wharf road, City road.

CLOSE to a Station on the Brighton Line, between Three Bridges and East Grinstead, FREEHOLD BUILDING PLOTS, TO BE LET or SOLD for Villas and an Inn. Apply to F. PALMER, Esq. at 18, New Steine, Brighton, or on the Premises, at the Grange-road Station. N.B Stone, sand, bricks, and good water close.

MONEY.—IMMEDIATE CASH ADVANCES MADE ON
FREEHOLD, LEASEHOLD, and COPYHOLD PROPERTY
TIMBER, WINE, and other WARRANTS.
BANKRUPTS' and INSOLVENTS' CASES CONDUCTED.
Balance Sheets Prepared, and Meetings of Creditors Convened
Mr. RICHARD CROSSLEY, ACCOUNTANT and BUSINESS AGENT,
17, Moorgate-street, Bank, London.

MONEY on FREEHOLD and LEASEHOLD PROPERTY, by the
MUTUAL LOAN FOUNDATION
Incorporated by Act of Parliament, 1860, 14, RUSSELL STREET, Covent Garden, W.C. Advances from £50 to £1,500, upon Freehold and Leasehold Property for any term up to ten years. Mortgages redeemed, and the advance can be repaid by easy instalments. Facilities afforded to tenants to purchase the houses they occupy, and the repayment of the advance taken as rent. Greater advantages are offered to borrowers than in building societies, there being no shares to subscribe for, or competition for an advance, and no deduction from the loan. No pre-liminary fees. Prospectus and forms of proposal sent on receipt of a directed stamped envelope
EDWARD HARPER, Secretary.

ALFRED GOSLETT begs to inform Architects, Builders, and the Trade generally, that every description of Glass required for building purposes can be procured WHOLESALE, either in STOCK SIZES or CUT TO ORDER, at his extensive warehouses as above.
SPECIAL ESTIMATES for the supply of LARGE QUANTITIES of Glass upon the receipt of particulars.

ASHTON COURT ESTATE COMPETITION, near Bristol.—300*l.* Premium.—A Surveyor having prepared a MODEL of the above ESTATE, will be happy to forward a CAST thereof on receipt of two guineas.—Address, JOHN LAVARS, Broad street Hall, Bristol.

BRIDGES, by the foot run or mile, in iron or wood, for clear spans, from 30 to 1,500 feet, for rail river, road, lark, or gorge. "Selley's Patent," stronger, lighter, and cheaper than any other, and perfectly rigid.—Apply to PATENTEE, or W. HUMBLER, Esq. C.E. 20, Abingdon street, Westminster. Admirably adapted for colonies and export.

NOTICE.—Builders and Decorators will find superior and unparalleled advantages in MEAD'S PATENT STAINS, comprising the rich oak, satin wood, walnut, Spanish mahogany, &c.; they far surpass anything ever seen, and entirely supersede paint for the interior woodwork of dwelling houses, being admirably adapted for the castle, the magnificent hall, the library, the drawing-room, and the miniature cottage; also for church work, merchants' and bankers' offices, railway stations, schools, &c. &c. To be had of T. J. HUGGS, 3, Brunswick-place, City-road, E.C.; and at the Works, Abridge, Essex. Price 8s. per gallon. Post orders will have best attention. The above merits special notice. The chaste and beautiful effect given to work finished with them, and great saving in time and expense, are highly appreciated by the most experienced workmen.

FOR immediate DISPOSAL, at low prices, TWO 2 horse BRICK-CARTS, ten 1-horse ditto, twelve dobbin carts, two joiner's carts, two timber carriages, one builder's van; also three waggons and several light traps, all new. May be seen at GEORGE ELL & CO'S Euston Works, 366 and 368, Euston road, Londo n, N.W.

WANTED, a DREDGER, on hire or purchase. Ought not to exceed 15 feet beam and 70 feet length, and capable of passing under bridges with only 8 feet headway, and of cutting 8 to 10 feet in depth.—Apply, stating terms, to N. BEARDMORE, C.E 20, Great George-street, Westminster, S.W.

TO BE LET, a DREDGING BOAT, in excellent repair, fitted with machinery combining all the latest improvements. Will dredge 8 feet deep, and is well calculated for river work. Her width does not exceed 11 feet, and draught of water 3 feet. May be seen at Peterborough, by applying to Mr. WM. READ, Boatbuilder.—For further particulars inquire of Mr. GEORGE SIDDONS, Oundle.
18th January, 1863.

TO CHURCHWARDENS, MILL PROPRIETORS, and OTHERS.—GEORGE FRITH, BUILDER, & Coventry, begs respectfully to call the attention of the above parties to his method of REPAIRING CHURCH SPIRES, CHIMNEY SHAFTS, and other elevated structures, without the expense of scaffolding. Church spires taken down and rebuilt, repointed, repaired, &c. Chimney-shafts repaired, pointed, and new caps fixed. New vanes and all kinds of lightning conductors applied. Estimates given. References from architects, engineers, &c. Circulars illustrating the principle and containing testimonials sent free on application as above.

N.B. Approved bills at three months' date will be taken from purchasers to the extent of 5l. and upwards.

CHIPPENHAM, WILTS.—To BUILDERS, CAPITALISTS, and OTHERS—IMPORTANT INVESTMENT.

MESSRS. PARRY & SON have received instructions from the Executors of the late Mr. Richard Mortimore to offer FOR SALE by AUCTION, in one or more lots, at the sun mit of FEBRUARY next, at the Angel Hotel, in Chippenham, an important FREEHOLD PROPERTY, consisting of valuable building ground, immediately adjoining the first class Railway station of Chippenham, at the junction of two branch lines of railway; together also with 12 substantial well-built Dwelling houses, excellent hunting stables, coach-houses with Lodge and out-offices connected therewith, and a veterinary forge, fronting a street called St. Mary's place, laid out on the property. The road to the railway station has been formed, at great expense, through the land, with an excellent sewer throughout the whole extent, capable of receiving drainage from the basements of any houses to be erected; and the Great Western Railway Company are under covenant to maintain the same as the road to the Railway station. The property connects the Station with the important and thriving market town of Chippenham, and the lines contiguous thereto. The land and some of the buildings are in contact of about 2a. 1r. 23p. The upper part, immediately adjoining the Station, offers an advantageous site for a large hotel, and valuable arrangements might be made for adapting a portion of the land for the increasing requirements of the Chippenham Cheese and Cattle Markets. The Lodges, which are already erected on the property, are well planned, and produce 70l. per annum. A portion of the purchase-money may remain on mortgage.—For particulars, apply to the Auctioneers, 47, Cheapside, and Chippenham; or at the Office of Mr GODDEY, Solicitor, Chippenham.

TO CONTRACTORS, BUILDERS, AND OTHERS.

MR. ROBERT BOYCE has been favoured with instructions from Mr. William Dethick, who has completed his contract with the Metropolitan Board of Works for the Main Drainage on Victoria Street Embankment, to SELL by AUCTION, without Reserve, on MONDAY, FEBRUARY 2d, 1863, at the following days, in the WORKS adjoining the Station of the Metropolitan Railway, at Victoria Street, Pimlico, the whole of the valuable PLANT and STORES, comprising a 20 horse power portable engine, driving stone engine, wood working engine, cement mill, &c., by Ruston & Proctor; eight and double puncheon mortars, gins, pumps, derricks, saw bench fitted for steam power, iron barrel dredging scoop, 10 cwt. spring dead weight hoist, 2 pairs of Morrison and Dunford's patent lifting jacks, 2 cwt. and 3 cwt. crabs, 2 timber trucks, two timber carts, twelve strong and useful cart horses, two set single and double shoot carts, fifty wheel barrows, large wood sheers, and a quantity of other useful plant.—To be viewed two days previous and morning of sale; and catalogues on the Works, and at the Auctioneer's Offices, 47, High street, Hoxton, N.

HACKNEY.

MESSRS. WINSTANLEY have received instructions from the Mortgagee to OFFER for SALE by AUCTION, at the MART, on FRIDAY, FEBRUARY 6, in two lots, TWO convenient family HOUSES, with shop, &c., being Nos. 2 and 3, Aspland-terrace, Amhurst road, East Hackney, a rapidly improving neighbourhood, 5 to the railway station. The houses are nearly finished, and a small outlay only is required to complete them for occupation. A separate lease for each house will be granted direct from the freeholder for a term of 80 years, at a ground rent of 14l. per annum. To be viewed. Printed particulars may be obtained of Messrs. J. J. ALLEN & SON, 85½, Long Lane, Carlisle street, Soho; at the Old Mermaid, Hackney; at the Place of Sale; and of Messrs. WINSTANLEY, 10, Paternoster-row, E.C.

EXTENSIVE SALE of TIMBER, STONE, TILES, &c. from the Chatham and Dover Railway.

MR. FREDERICK INDERMAUR will SELL by AUCTION, on MONDAY and TUESDAY Next, at TWELVE o'clock, on the PREMISES, Edmund street, Snithampton street, Canal road, comprising large and ex ensive rafter, lowest cut quartering, quantity of floor and lining boards and 3in. planks, portions of sheets, iron gates and railings, sashes and doors, York paving and sundries, fan bunks, slate slabs, steps, and coping, railway sleepers, and other articles. May be viewed and catalogues obtained, and at the Auctioneer's Office, 130, Union street, Borough.

OLD BROAD-STREET.—BUILDING MATERIALS of Two HOUSES.

PULLEN, HORNE, & EVERSFIELD are directed to SELL by AUCTION, on the PREMISES, on MONDAY, FEBRUARY 9, at TWELVE, in lots, all the BUILDING MATERIALS, FIXTURES and FITTINGS-UP of TWO HOUSES situate in Cushion court, Old Broad street, comprising stock brick, oak and fir timber in roofs and floors, plain tiles, sashes, doors, partitions, wainscoting, marble and other chimney pieces, sound floor boards, York paving, coping and sills, zinc flats, lead gutters and 1-pipe, screwed, and various useful fittings up.—May be viewed on Saturday prev ous, and catalogues had of J. CORBETT, Esq., and THOMAS NEWSON, Esq., Architects, 17, Gracechurch-street; and of PULLEN, HORNE, & EVERSFIELD, 80, Fore-street, E.C. and 40, Parliament-street, S.W.

CHARING CROSS RAILWAY.—Twenty-fifth Clearance Sale.—Building Materials.—Ninth Portion of the Hungerford Market.—To Builders, Contractors, Paviors, and Others.

MR. MARSH, in conjunction with Messrs. WILLIS & HARROW, is favoured with instructions from the Directors to SELL by AUCTION, on the PREMISES, on TUESDAY, FEBRUARY 10th, 1863, at ONE o'clock punctually, in lots, the NINTH PORTION of the very valuable BUILDING MATERIALS of three Houses in Hungerford-street and two Houses in the Strand: comprising capital stock brickwork, Bangor slating, 9-in. and 11-in. gauged arch fronts, 60 flooring boards, sashes and frames, fastened and ribbed doors, plate glass and glazed sash-bars, lead in flats, pipes, and gutters, plain and panelled grates, slop-stoves, ranges, marble and other chimneypieces, and a variety of useful fixtures and fittings up. May be viewed the day prior to sale, and catalogues had of Mr. MARSH, 4, Old Jewry-chambers; of Messrs. WILLIS & HARROW, Auctioneers and Surveyors, 3, Newman's-court, Cornhill, E.C. and West Molesey, Kingston, Surrey; and of Mr. EDWARD BYRON, Surveyor to the Company, at his Offices in the Lot Ion Bridge Terminus.

MIDDLESEX, WEST DRAYTON.—To BUILDERS, CONTRACTORS, and OTHERS.

MESSRS. E. & C. NEWMAN have received instructions from Messrs W. & J. Stidds, to SELL by AUCTION, in three BRICKFIELDS, near the West Drayton Station of the Great Western Railway.—May be viewed and catalogues had four days prior to the sale at the Bo Bargh Arms, West Drayton; No. 72, Chiswell-street, Finsbury; and at the Offices of the Auctioneers, Agricultural and General Valuers, West end House, Uxbridge, and Church Farm, Harlington, Middlesex.

BUILDING LAND ISLEWORTH, MIDDLESEX.—Desirable Freehold at Copshold Property, held of the Manor of Isleworth aforesaid, at a nominal rate certain.

MESSRS. KING & SON are instructed to SELL by AUCTION, at the AUCTION MART, near the Bank of England, on MONDAY, FEBRUARY 9, at TWELVE, in five lots, a substantially-built PROPERTY, known as the Coach and Horses Inn, with a private house adjoining, very commodiously situate on the roadside, and containing extensive accommodation for business, with yard, stabling for seventeen horses, out-houses, walled garden, &c.; let on lease determinable at Michaelmas, 1865, to Messrs Young & Burbridge, at an annual rent of 95l. Five private Houses adjoining, known as Park Cottages, with back and front gardens, at rents amounting to 39l. per annum. A noble and very substantially built detached Family Residence, distinguished as Syon Lodge, approached by a flight of stone steps, and containing every accommodation for a gentleman's family, situate at an agreeable distance from the high road, at Isleworth Syon Park, with large paved courtyard, stabling for six horses, coach-house, and outhouses, brewhouse
